An investigation of the effect of the sharing of flues by furnaces and water heaters on the performance of venting systems serving natural gas appliances was conducted. The investigation comprised: a literature review, a review of applicable codes and standards, controlled field testing to investigate the effect of various water heater vent connector configurations on venting performance, modification of the FLUE SIMULATOR computer model to allow it to model shared flue venting systems, calibration of the modified FLUE SIMULATOR model using the results of the field tests, use of the FLUE SIMULATOR model to predict the effect of flue sharing on venting performance in a variety of situations, and development of guidelines for heating industry service personnel. The results of this study indicate that the sharing of flues greatly exacerbates venting problems when the conditions for proper venting are already adverse. This makes it important that both the furnace and the water heater vent connectors have "clean" flow areas with as few elbows and contractions as possible. As well, it was shown that the flow area of the venting system downstream of the furnace/water heater connection should also be as clean as possible. Field and monitoring results were used to suggest how well various current practices in vent connector installation serve the above design objectives. It was found that configurations in which the water heater vent connector is connected separately to the flue (i.e. it does not connect to the furnace vent connector) should be the least prone to combustion venting problems. 3 refs., 17 figs., 2 tabs.

37026 **Physics of particle accelerators: Volume 1.** AIP (Am. Inst. Phys.) Conf. Proc., No. 184. Month, M.; Dienes, M. (eds.). 1136p. American Institute of Physics, New York, NY (1989). Sponsored by DOE/ER;OUS. (CONF-8808234–Vol.1-Exc.: U.S. Particle Accelerator School: physics of particle accelerators; U.S. Particle Accelerator School, Batavia, Illinois, USA; Ithaca, New York, USA, 20 Jul - 14 aug 1987; aug 1988).

This book contains papers on the following topics: an introduction to the physics of particle accelerators; transverse motion of single particles in accelerators; fundamentals-longitudinal motion; rf system considerations for a large hadron collider; beam observation and the nature of instabilities; bunched beam diagnostics; fields, impedances, and structures; introduction to wake fields and wake potentials; characteristics of synchrotron radiation; review of linear collider beam-beam interaction; the linear collider beam-beam problem; a quantum treatment of beamstrahlung and its application to ribbon pulses; methods of beam optics; nonlinear dynamics; phase space concepts; comments on nonlinear dynamics studies in storage rings; the description of particle accelerators using high-order perturbation theory on maps; methods of stability analysis in nonlinear mechanics; advanced nonlinear theory: long-term stability at the SSC; a review on the lattice design of large hadron colliders; the physics of codes; and canonical integrators as tracking codes.

37027 **Physics of particle accelerators: Volume 2.** AIP (Am. Inst. Phys.) Conf. Proc., No. 184. Month, M.; Dienes, M. (eds.). 1197p. American Institute of Physics, New York, NY (1989). Sponsored by DOE/ER;OUS. (CONF-8808234–Vol.2-Exc.: U.S. Particle Accelerator School: physics of particle accelerators; U.S. Particle Accelerator School, Batavia, Illinois, USA; Ithaca, New York, USA, 20 Jul - 14 aug 1987; aug 1988).

This volume is based on lectures presented at the 1987 US Particle Accelerator School, held at Fermi National Accelerator Laboratory in July and August 1987, in addition to selected material from the school at Cornell University in August 1988. As is our custom, review articles are also included for completeness and to enhance the book's quality. In addition to topics on the Fermilab tevatron the following are discussed: a compendium of computer codes used in particle accelerator design and analysis; superconducting magnet system; superconductor developments; radio-frequency acceleration; principles and technology of RFQs; photocathode RF guns; low emittance thermionic electron guns; intense, low emittance injectors for RF electron linacs; final focus systems for linear colliders; positrons for linear colliders; free-electron lasers; free-electron lasers; fundamentals on intense relativistic electron beams; application of pulse power technology to ultra high energy electron accelerators; coherence and statistical properties of photon beams with application to the free-electron laser; and plasma acceleration of particle beams.

37028 (DOE/ER/03130–48C) **Offline computing farms.** Cutts, D.; Hoftun, J.; Partridge, R. Brown Univ., Providence, RI (USA). 26 Jan 1989. 4p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER03130. Order Number DE89013958/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The DØ experiment will require substantial offline computing resources to perform production analysis, data reduction, and Monte Carlo event generation. Given the significant head start obtained by CDF, it is imperative that DØ have a fully functional offline computing environment ready at detector turn on to allow fast hardware and software shakedown and quick analysis of the data. The ability to get physics results out quickly is especially important to the graduate students, postdocs, and junior faculty who need to be able to present physics talks for future jobs/tenure. For these reasons, we believe DØ must begin planning its offline computing environment now, paying particular attention to the issue of software compatibility which has plagued CDF. In particular, proper evaluation of system cost should give at least equal weight to software development, management, and operational demands on the collaboration. We believe the best solution to the DØ offline computing needs is the development of computing farms utilizing DEC VAX computers.

This note describes a model for such farms that we think can be realized with today's technology.

37029 QA at Fermilab. Bodnarczuk, M. (Fermi National Accelerator Lab., Box 500 Batavia, IL (US)). *Nuclear Materials Management. Annual Meeting Proceedings (USA)*, 17: 413-416 (1988). (CONF-880631–: 29. annual meeting of the Institute of Nuclear Materials Management, Las Vegas, NV, USA, 26-29 Jun 1988).

This paper opens with a brief overview of the purpose of Fermilab and historical synopsis of the development and current status of quality assurance (QA) at the Laboratory. The paper subsequently addresses some of the more important aspects of interpreting the national standard ANSI/ASME NQA-1 in pure research environments like Fermilab. Highlights of this discussion include, (1) what is hermeneutics and why are hermeneutical considerations relevant for QA, (2) a critical analysis of NQA-1 focussing on teleological aspects of the standard, (3) a description of the hermeneutical approach to NQA-1 used at Fermilab which attempts to capture the true intents of the document without violating the deeply ingrained traditions of quality standards and peer review that have been foundational to the overall success of the paradigms of high-energy physics.

37030 (BNL–42333) **Synchrotron light source data book.** Murphy, J. Brookhaven National Lab., Upton, NY (USA). Jan 1989. 96p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH00016. Order Number DE89014499/JAW. Available from NTIS, PC A05/MF A01 - OSTI.

The "Synchrotron Light Source Data Book" is as its name implies a collection of data on existing and planned synchrotron light sources. The intention was to provide a compendium of tools for the design of electron storage rings as synchrotron radiation sources. The slant is toward the accelerator physicist as other booklets such as the X-ray Data Booklet, edited by D. Vaughan (LBL PUB-490), address the 'use' of synchrotron radiation. It is hoped that the booklet serves as a pocket sized reference to facilitate back of the envelope type calculations. It contains some useful formulae in 'practical units' and a brief description of many of the existing and planned light source lattices.

37031 (DOE/ER/40150–79) **CEBAF/SURA 1984 summer workshop: Proceedings.** Gross, F.; Whitney, R.R. (eds.). Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility. Nov 1984. 518p. Sponsored by DOE Energy Research. DOE Contract AC05-84ER40150. (CONF-8406162–: CEBAF summer workshop, Newport News, VA, USA, 25-29 Jun 1984). Order Number DE89014424/JAW. Available from NTIS, PC A23/MF A01 - OSTI (37.00); GPO Dep.

This report discusses the following topics: Summary: Magnetic Spectrometer Working Group; Workshop Report: Internal Targets and Tagged Photons; Nucleon Physics with Chromodynamics: From High Q^2 to Baryon Spectroscopy to Nuclear Physics; Quark Signatures in Nuclear Physics; What Can We Learn About the Three-Nucleon Wave Functions from High Energy Electrons; Coincidence and Polarization Measurements with High-Energy Electrons; NPAS – a Program of Nuclear Physics at SLAC; Spectrometers; Polarized Gas Targets in Electron Rings; Photonuclear Experiments Using Large Acceptance Detectors; 4 π Detectors; Magnetic Spectrometer Working Group Report; Workshop Report: Tagged Photons - Low Current Electron Beams and Large Acceptance - 4 π Detectors; Positron Beams at CEBAF; Lampshade Magnet for a Large-Aperture Detector; Meson Exchange in Relativistic Quark Models; Electron Scattering from Discrete Low-Lying Levels of ^{13}C at High Momentum Transfer; NN Potential With a Six Quark Core from the Constituent Quark Model; A Study of (e,e'N) Reactions from Nuclear Targets; Study of Complex Nuclei Using Internal Targets at CEBAF; The Kaon-Nucleon Interaction in a Quark Potential Model; and Current Conservation and Magnetic Form Factors of ^3He, ^3H.

37032 (DOE/ER/40150–80) **Research program at CEBAF (II): Report of the 1986 summer Study Group, June 2–August 29, 1986.** Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility. Jan 1987. 725p. Sponsored by DOE Energy Research. DOE Contract AC05-84ER40150. Order Number DE89014428/JAW. Available from NTIS, PC A99/MF A01 - OSTI (47.50).

This report discusses research performed at the CEBAF accelerator. Topics covered are: single nucleon emission; excited baryons; electromagnetic production of strange nuclear systems; studies in the x-scaling region; weak interactions; particle theory; magnetic spectrometers; real photons; and targets and production processes. (LSP)

37033 (DOE/ER/40355–T1) **Siting the superconducting super collider.** Price, R.; Rooney, R.C. (eds.). National Academy of Sciences - National Academy of Engineering, Washington, DC (USA). Super Collider Site Evaluation Committee. 1988. 62p. Sponsored by DOE Energy Research. DOE Contract AC01-87ER40355. Order Number DE89014528/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

At the request of the Department of Energy, the National Academy of Sciences and the National Academy of Engineering established the Super Collider Site Evaluation Committee to evaluate the suitability of proposed sites for the Superconducting Super Collider. Thirty-six proposals were examined by the committee. Using the set of criteria announced by DOE in its Invitation for Site Proposals, the committee identified eight sites that merited inclusion on a "best qualified list." The list represents the best collective judgment of 21 individuals, carefully chosen for their expertise and impartiality, after a detailed assessment of the proposals using 19 technical subcriteria and DOE's life cycle cost estimates. The sites, in alphabetical order, are: Arizona/Maricopa; Colorado; Illinois; Michigan/Stockbridge; New York/Rochester; North Carolina; Tennessee; and Texas/Dallas-Fort Worth. The evaluation of these sites and the Superconducting Super Collider are discussed in this book.

37034 (DOE/ER/40374–21) **A compact x-ray lithography lattice using superferric magnets.** Swenson, C.A.; Huson, F.R.; MacKay, W.W.; Chen, L.K.; Ohnuma, S. Texas Accelerator Center, The Woodlands, TX (USA). 1989. 3p. Sponsored by DOE Energy Research. DOE Contract FG05-87ER40374. (CONF-890335–217: 13. particle accelerator conference, Chicago, IL, USA, 20-23 Mar 1989). Order Number DE89013947/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A conceptual lattice design for a very compact superconducting synchrotron dedicated to x-ray lithography is presented. The synchrotron radiation produced in the high field superconducting magnets has a critical wavelength of 10Å at a beam energy of about 787 MeV. The size and angular divergence of the beam in this lattice can satisfy the future requirements for x-ray lithography: $\sigma_{x,y} \leq$ 1mm, and $\sigma l_{x,y} \leq$ 1mr. The paper will present an optimization of the lithography parameters σ_x, and σl_x for this lattice configuration. 7 refs., 4 figs., 1 tab.

37035 (DOE/ER/40374–22) **Compact linacs for positron emission tomography.** Raparia, D.; Machida, S. Houston Univ., TX (USA). 1989. 4p. Sponsored by DOE Energy Research. DOE Contract FG05-87ER40374. (CONF-890335–216: 13. particle accelerator conference, Chicago, IL, USA, 20-23 Mar 1989). Order Number DE89013948/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Compact 14 MeV proton and 7 MeV deuteron linacs for use in positron emission tomography (PET) have been studied, and conceptual designs for low energy beam transports (LEBT), radio-frequency quadrupole (RFQ) and drift tube linacs (DTL) have been achieved. The machines are compact and simple enough to be operated in hospitals. The LEBT consist of two Einzel lenses and are about 25 cm long. The 425 MHz proton RFQ is designed for 50 mA peak current, and the 425 MHz deuteron RFQ is designed for 25 mA peak current. Both 850 MHz DTLs use permanent quadrupole magnets and have high acceleration field of 15 MV/m with a peak field of twice the Kilpatrick limit. 6 refs., 5 figs., 2 tabs.

37036 (INIS-SU–87/A, pp. 3-5) **Acceleration He_4^{2+} ions on the 1-2 proton linear accelerator up to the energy of 24 MeV/**

nucleus. Artemov, V.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki); Batalin, V.A.; Kapchinskij, I.M. and others. Available from NTIS (US Sales Only), PC A05/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Reconstruction project for small-size deuteron linear accelerator with alternating-phase focusing is discussed. Reconstruction is carried out mainly by substitution of modified structure for the accelerated one. In a new structure the lengths of separate accelerating-focusing periods are reduced, that permitted to take four such periods rather than three, the length being unchanged. HF field operating intensity on the system axis has increased up to 12 kV/cm. Numerical calculation of particle dynamics and modelling of structure electrodynamic characteristics permit to expect the increase of accelerated beam intensity. 2 refs.; 5 figs.

37038 (INIS-SU–87/A, pp. 46-48) **1 MeV proton accelerator.** Val'dner, O.A. (Moskovskij Inzhenerno-Fizicheskij Inst., Moscow (USSR)); Gass, V.F.; Glazkov, A.A. and others. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Available from NTIS (US Sales Only), PC A05/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Study of ion linear accelerators aimed at their widescale utilization in commercial practice is carried out in Moscow Engineering Physical Institute. 1 MeV proton linear accelerator is the first one to satisfy this purpose. Basic moments of accelerator design and construction are considered. In detailing, designing and producing separate accelerator units weel-known designs but with a new elements, as well as new, promising engineering ideas were widely used. The accelerator tuning was carried out for a maximum of accelerated current. The obtained accelerator performances well agree with the calculated data. The accelerated proton peak current is 4 mA, the average current is limited by injected beam parameters and consitutes 6 μA. 4 refs.; 5 figs.

37039 (INIS-SU–87/A, pp. 49-52) **Software for the communication of the BESM-6 computer complex with peripheral centers.** Borisov, A.D. (AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst.); Dem'yanov, V.G.; Luk'yanova, V.P.; Mandryk, A.N.; Panchenko, V.I.; Pronzhenko, N.M.; Slabospitskij, R.P.; Shulika, A.K.; Shcherbak, V.V. Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Hardware and software structure aimed at the communication of the BESM-6 computer complex with peripheral data acquisition and processing systems are described. Communication hierarchy includes data processor (two BESM-6 computers), communication processor Mera-60 and peripheral computer complexes for physical experiment data processing automation. The message formats are determined. The line speed in external communication is 16 kbaud, in Mera-60-BESM-6 channel swapping rate constitutes 6.5...8.6 kbyte/s and depends on computer loading. 11 refs.; 3 figs.

37040 (LA–11601-MS) **Proton linear accelerators: A theoretical and historical introduction.** Lapostolle, P.M. Los Alamos National Lab., NM (USA). Jul 1989. 129p. DOE Contract W-7405-ENG-36. Order Number DE89014261/JAW. Available from NTIS, PC A07/MF A01 - OSTI; GPO Dep.

From the beginning, the development of linear accelerators has followed a number of different directions. This report surveys the basic ideas and general principles of such machines, pointing out the problems that have led to the various improvements, with the hope that it may also aid further progress. After a brief historical survey, the principal aspects of accelerator theory are covered in some detail: phase stability, focusing, radio-frequency accelerating structures, the detailed calculation of particle dynamics, and space-charge effects at high intensities. These developments apply essentially to proton and ion accelerators, and only the last chapter deals with a few aspects relative to electrons. 134 refs.

37041 (LA-UR–89-1901) **Cost of a normalconducting linac structure.** Schaffer, G. Los Alamos National Lab., NM (USA). 1989. 4p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-890299–14: AHF accelerator design workshop, Los Alamos, New Mexico, USA, 20-25 Feb 1989). Order Number DE89014237/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We would like to illustrate the cost variation for different gradients of a possible LAMPF linac extension, assuming a normalconducting structure.

37042 (LA-UR–89-1903) **Cost projection for a superconducting linac structure.** Schaffer, G. Los Alamos National Lab., NM (USA). 1989. 14p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-890299–12: AHF accelerator design workshop, Los Alamos, New Mexico, USA, 20-25 Feb 1989). Order Number DE89014029/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The increase of energy of the present 800 MeV proton linac at LAMPF to 1.6 to 2.2 GeV is of primary importance for the proposed future experimental program of this Laboratory. Layout and cost studies have been performed for (a) normalconducting and (b) superconducting accelerating structures. A more recent cost analysis for a superconducting structure is given in this report. 4 figs., 2 tabs.

37043 (LA-UR–89-1956) **Summary of Linac Group discussions.** Schaffer, G. Los Alamos National Lab., NM (USA). 1989. 6p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-890299–13: AHF accelerator design workshop, Los Alamos, New Mexico, USA, 20-25 Feb 1989). Order Number DE89014257/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper discusses upgrading of the LAMPF I linac. Particular topics discussed are: sources of and cures for linac beam halos, ion source, RFQ, chopper and drift-tube linac, cavity-coupled linac, superconducting linac structure, new rf power sources, EHF linac design, and cost projections. (LSP)

37044 (ORNL/FTR–3250) **[Twelfth international conference on cyclotrons and their applications, Berlin, W. Germany, and**

visit to Hahn-Meitner-Institute, May 8–12, 1989]: Foreign trip report. Olsen, D.K.; Mosko, S.W. Oak Ridge National Lab., TN (USA). 12 Jun 1989. 10p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014729/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The travelers attended the "Twelfth International Conference on Cyclotrons and Their Applications" held in Berlin, West Germany, from May 8–12, 1989, where they presented a paper on "HISTRAP Hardware Prototype Studies." One traveler served on the International Organizing Committee (D.K. Olsen). The conference offered a unique opportunity to learn of cyclotron and related activity throughout the world. Review talks were given on the current generation of $K \geq 400$ superconducting and conventional separated-sector research cyclotrons. All of these machines are in operation or nearing completion. No new major projects were announced. There is considerable new work on cyclotrons for radiation therapy and isotope production.

37045 (SAND–89-0863C) **A technique for efficiently cleaning and conditioning low- and medium-energy accelerators.** Langley, R.A.; McDonald, J.M. Sandia National Labs., Albuquerque, NM (USA). 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC04-76DP00789. (CONF-8904230–2: AVS topical conference on surface conditioning of vacuum systems, Los Angeles, California, USA, 3-7 Apr 1989). Order Number DE89013450/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A technique has been developed for cleaning and conditioning low- and medium-energy accelerators by alternating a glow discharge using hydrogen gas and a glow discharge using oxygen gas. The study was initiated using a 2.5-MeV Van de Graaff accelerator. It has since been used on both lower-energy (down to 10 keV) and higher-energy (up to 10 MeV) accelerators with equal effectiveness. In the development stage, the conditioning time for attaining the nominal maximum voltage was reduced from about ten days using pumping and voltage conditioning to one day using the glow discharge technique. After a glow discharge conditioning sequence, the 2.5-MeV accelerator could be operated effectively at energies to 3.4 MeV. In addition, the accelerator tube life was found to increase significantly over the expected lifetime. This technique is described and safety considerations are discussed.

37046 (UCRL–100356) **Modeling of the proposed ATA fast correction coils.** Zentler, J.M.; Vogtlin, G.E.; Thomas, R.A. Lawrence Livermore National Lab., CA (USA). Jun 1989. 5p. Sponsored by DOD;DOE/DP. DOE Contract W-7405-ENG-48. (CONF-890665–26: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, CA, USA, 12-14 Jun 1989). Order Number DE89014037/JAW. Available from NTIS, PC A02/MF A01 - OSTI.

The Fast Correction Coil system will provide dynamic beam steering on the ATA linear electron accelerator at LLNL. We are designing the system using multi-conductor transmission line theory to model the coil response. The JASON electrostatics code is used to predict both E and B field profiles within the coil and to determine all coil electrical parameters. We simulate the electrical system behavior using either of two circuit models based on these parameters. One incorporates the NET2 circuit analysis code, while the other is a purely analytic model. These models have allowed us to conduct a comprehensive trade-off study aimed at designing the most efficient system within the constraints set by accelerator physics requirements. 3 refs., 9 figs.

37047 (DOE/ER/40374–17) **Comparison of analytical and computational estimates of reduction in linear aperture in the presence of sextupole field.** Li, Mingyang; Ohnuma, S. Texas Univ., Houston, TX (USA). Dept. of Physics. 1989. 3p. Sponsored by DOE Energy Research. DOE Contract FG05-87ER40374. (CONF-890335–221: 13. particle accelerator conference, Chicago, IL, USA, 20-23 Mar 1989). Order Number DE89013943/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

For an easy comparison of the expected improvement in the linear aperture when magnets are sorted according to various schemes, it is desirable to have a figure-of-merit which can be evaluated without time-consuming tracking calculations. Such a figure-of-merit is proposed here in terms of the sextupole distortion functions introduced by T. Collins. A test lattice composed of 512 dipoles with random sextupole field component is used to calculate the figure-of-merit and the indicated improvement in the linear aperture is compared with the results from numerical tracking. As the linear aperture, two definitions are used, one by the SSC-CDG (smear = 6.4%) and the other by CERN SPS (smear = 1.75%). 8 refs., 2 tabs.

37048 (DOE/ER/40374–18) **The beam tracking during the first few milliseconds of a low energy booster.** Machida, Shinji. Texas Accelerator Center, The Woodlands, TX (USA). 28 Jun 1989. 4p. Sponsored by DOE Energy Research. DOE Contract FG05-87ER40374. (CONF-890335–220: 13. particle accelerator conference, Chicago, IL, USA, 20-23 Mar 1989). Order Number DE89013944/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The space charge effect in the presence of sextupole resonance was studied using the lattice of the SSC low energy booster. We performed the multiparticle tracking with a self-consistent charge distribution. When there are synchrotron oscillations, a slight emittance growth is observed, which differs from the result of non-self-consistent tracking. However, this growth cannot be caused by repeated crossing of resonances due to sextupole field in dipoles. The tracking result has shown that the emittance dilution of the whole beam should be considered instead of amplitude growth of some particular particles. 9 refs., 4 figs., 3 tabs.

37049 (DOE/ER/40374–20) **Application of novel material in crystal accelerator concepts.** Newberger, B.; Tajima, T.; Huson, F.R.; Mackay, W.; Covington, B.C.; Payne, J.R.; Zou, Z.G.; Hahale, N.K.; Ohnuma, S. Texas Univ., Houston, TX (USA). 1989. 3p. Sponsored by DOE Energy Research. DOE Contract FG05-87ER40374. (CONF-890335–218: 13. particle accelerator conference, Chicago, IL, USA, 20-23 Mar 1989). Order Number DE89013946/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Materials which incorporate regular macroscopic features superposed on the underlying crystal lattice are of potential interest in the application to crystal accelerators and coherent radiation sources. We have recently begun an investigation of one such material, porous Si, in which pores of radii up to a few tens of lattice spacings are etched through finite volumes of a single crystal. The potential reduction of losses to particles hyperchanneled along the pores makes this a very interesting material in crystal accelerators for relativistic, positively charged particles. Our results on material properties which are important in this context will be presented. The consequences for particle transport will be discussed. 12 refs., 8 figs.

37050 (DOE/ER/40374–23) **Beam-beam interaction and pacman effects in the SSC with random nonlinear multipoles.** Goderre, G.P.; Mahale, N.K.; Ohnuma, S. Houston Univ., TX (USA). 25 May 1989. 9p. Sponsored by DOE Energy Research. DOE Contract FG05-87ER40374. (CONF-890594–1: 3. advanced inertial confinement fusion accelerator beam dynamics workshop: beam-beam effects in circular colliders, Novosibirsk, USSR, 20 May - 3 jun 1989). Order Number DE89013949/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In order to find the combined effects of beam-beam interaction (head-on and long-range) and random nonlinear multipoles in dipole magnets, transverse tunes and smears have been calculated as a function of oscillation amplitudes. Two types of particles, "regular" and "pacman," have been investigated using a modified version of the tracking code TEAPOT. Regular particles experience beam-beam interactions in all four interaction regions (IR's), both head-on and long-range, while pacman particles interact with bunches of the other beam in one medium-beta and one low-beta IR's only. The model for the beam-beam interaction is of weak-strong type and the strong beam is assumed to have a round Gaussian charge distribution. Furthermore, it is assumed that the vertical closed orbit

deviation arising from the finite crossing angle of 70 μrad is perfectly compensated for regular particles. The same compensation applied to pacman particles creates a closed orbit distortion. Linear tunes are adjusted for regular particles to the design values but there are no nonlinear corrections except for chromaticity correcting sextupoles in two families. Results obtained in this study do not show any reduction of dynamic or linear apertures for pacman particles when the oscillation amplitude is less than $\sim 10\sigma$. However, smears often exhibit a strong dependence on tunes, casting some doubts on the validity of defining the linear aperture from the smear alone. 10 refs., 16 figs., 3 tabs.

37051 (FNAL/C–89/115) **Gabor lens focusing of a negative ion beam.** Palkovic, J.A.; Mills, F.E.; Schmidt, C.; Young, D.E. Fermi National Accelerator Lab., Batavia, IL (USA). May 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-890335–212: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989). Order Number DE89014170/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Gabor or plasma lenses have previously been used to focus intense beams of positive ions at energies from 10 keV to 5 MeV. It is the large electrostatic field of the non-neutral plasma in the Gabor lens which is responsible for the focusing. Focusing an ion beam with a given sign of charge in a Gabor lens requires a non-neutral plasma with the opposite sign of charge as the beam. A Gabor lens constructed at Fermilab has been used to focus a 30 keV proton beam with good optical quality. We discuss studies of the action of a Gabor lens on a beam of negative ions. A Gabor lens has been considered for matching an H^- beam into an RFQ in the redesign of the low energy section of the Fermilab linac. 9 refs., 3 figs., 1 tab.

37052 (GANIL-T–89-01) **Theoretical and numerical study of cyclotron in space charge conditions.** Cazoll, V. Paris-11 Univ., 91 - Orsay (France); Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). Nov 1988. 95p. (In French). Order Number DE89789212/JAW. Available from NTIS (US Sales Only), PC A05/MF A01.

During the last decade, the need of high ion beam intensities urged the cyclotron laboratories to amplify the efforts to study the space charge effects in these machines. The cyclotron space charge effects are intimately linked to two specific features of this kind of accelerator; - the beam is formed of a succession of bunches having about the same size for transverse and longitudinal dimensions, - the radial and longitudinal motions are strongly coupled. The analytical model developed in this thesis explains some effects produced by the space charge forces. It describes the motion of an ion contained in a bunch. This ion moves under the effects of the guiding field forces, the accelerator cyclotron field forces and the space charge forces created by the other particles of the bunch. The solutions of the first order differential equations describe the small motion around one particle, which is taken as a reference particle. These solutions are valid in the vicinity of the bunch center, where the space charge forces are considered linear. The results of the model are compared with those obtained from a multiparticle code. This code has been already used successfully at GANIL (the Great National Heavy Ions Accelerator). The evolution of the whole beam has also been studied with this code, which takes into acount the non linear space charge effects and all the couplings. The results obtained by the numerical study of a proposed new injector for the cyclotrons of GANIL shows that it is possible to obtain an important increase of the beam intensity.

37053 (IFVE-OLU–88-32) **Quasistatic model of H-wave accelerating structures.** Barsukov, A.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij. 1988. 10p. (In Russian). Order Number DE89620108/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the journal Zh. Tekh. Fiz.

A quasistatic model of the long H-wave cavities used to construct the linear ion accelerating structures is described. The model is based on the private regions method using the extension basis and equivalence quasistatic boundary conditions on the accelerating beam channel. This approach allows one to derive the approximate dispersion equation for the fundamental H-oscillation frequencies as well as to take into account the influence of the regional effects in the border regions on the H-structure parameters. 9 refs.; 4 figs.; 1 tab.

37054 (IFVE-OLU–88-33) **Correction of field distribution in an H-wave weakly irregular accelerating structure.** Barsukov, A.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij. 1988. 10p. (In Russian). Order Number DE89620109/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The problem of calculating the characteristics of the cross-section of the weakly irregular accelerating structure on the final length H-wave is considered. The dependence of the accelerating electrodes geometry on the relative speed of an equilibrium particle is taken into account. The problem is solved by the perturbation theory method for a quasistatic model of the H-structures minimizing RMS field distribution deflexion from the regular one. The calculational example for the accelerating structure on the cylinder H-resonator of the linear ion accelerator with high frequency quadrupole focusing of the IHEP injector- to-booster is considered. 11 refs.; 2 figs.; 2 tabs.

37055 (INIS-SU–87/A, pp. 14-23) **Effect of high-frequency energy recuperation on the intense electron beam acceleration dynamics.** Ajzatskij, N.I. (AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Longitudinal motion matching when the beam passes from the long-wave to short-wave accelerator region is considered. The beam matching is shown to take place in a special device both at high and low beam currents. To satisfy optimum matching the matching device length must be increased with the current growth and electric field intensity and synchronous phase must be increased or decreased depending on the ratio of Coulomb parameters in the long-wave and short-wave accelerator regions and frequencies of longitudinal phase oscillations. Nonoptimality of matching parameters cause growth of efficient longitudinal emittance with δ gain in short-wave accelerator region. δ value increases with the beam current growth. To estimate optimum matching parameters depending on the beam current the ratios are presented. 2 refs.; 2 figs.; 1 tab.

Available from NTIS (US Sales Only), PC A05/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Cleaning of magnetized diode gap from plasma ions followed by electron space charge formation in a plasma is investigated. It is shown that as a result of time redistribution of electron and ion concentration along the gap length the electric field in plasma may be several fold greater the vacuum field, that causes the corresponding increase of external insulating magnetic field in comparison with the critical cut-off field. The gap cleaning takes place for a period compared with the transit time of ions of anode-cathode space. 6 refs.; 3 figs.

37058 (INIS-SU–87/A, pp. 30-32) **Electromagnetic wave scattering on the jump of the waveguide cross section.** Ostroushko, V.N. (AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst.). Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. (In Russian). (CONF-8706388–: 10. Available from NTIS (US Sales Only), PC A05/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Electromagnetic wave scattering on the jump of the waveguide cross section and eigenvalue problem for the section of this structure are considered. The ratios expressing travelling and beyond-cutoff wave amplitudes in terms of some functions assigned for the intermediate cross section are desired. The problem solutions are accurate for the structures distinguished by intermediate cross section currents. The derived approximate solutions are found taking into account requirements for minimization of the power dissipated, by these currents, the electromagnetic wave power in the structure being specified. This method is checked by comparing the calculated and reference data for coaxial resonator. 2 refs.; 1 fig.

37059 (INIS-SU–87/A, pp. 40-43) **Application of cyclotron instability for excitation of RF fields in linear accelerators.** Ivanov, B.I. (AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst.); Onishchenko, I.N.; Balakirev, V.A.; Gorozhanin, D.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Application of fast electron beams (EB) for RF-field excitation in slow-down structures (SDS) of linear ion accelerators using normal and anomalous Doppler effect cyclotron instability is considered. To realize this method the EB is injected along the SDS AXIS. Longitudinal resonance magnetic field varying along the length depending on the wave phase velocity is induced. The main advantages are the following: provision for simultaneous radial and phase stability of accelerated ions, one-mode excited oscillations, resonance excitation of RF fields with a beam not changing the wave frequency of phase velocity in SDS. A detailed consideration is carried out on the example of H-wave accelerating structures. Necessary calculations are performed promising character and advantages of the given method of RF-field excitation and ion acceleration are shown. 11 refs.

Available from NTIS (US Sales Only), PC A05/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Efficiency of electron acceleration in the field of standing formed by beam of laser radiation over dielectrical grid is estimated. The accleration process is shown to be one-mode and with existing lasers and dielectric materials permits to obtain an average particle acceleration rate of the order of $2x10^4$ eV/λ. 3 refs.; 2 figs.

37062 (JINR-R–9-88-416) **Hardware and software complex for cyclotron beam dynamics simulation.** Vorozhtsov, S.B.; Kalinkina, M.B.; Saenko, V.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1988. 12p. (In Russian). Order Number DE89620120/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The main part of the considered complex for cyclotron beam dynamics simulation is the system of programs provided by courtesy of A. Chabert (GANIL), and also the programs written at the Laboratory of Nuclear Problems, JINR. For th beam dynamics simulation the Pravets-16 personal computer connected to CDC-6500 host computer through JINET local net is used. Implementation of this system allowed one to carry out the calculations of equilibrium orbit, betatron frequencies, isochronous field under the given flutter, central beam orbit, the beam transition from injection to extraction radii with space charge effects included. 13 refs.; 10 figs.; 1 tab.

37063 (LA-UR–89-2089) **Unbunched beam electron-proton instability in the PSR and advanced hadron facilities.** Wang, Tai-Sen; Pisent, A.; Neuffer, D.V. Los Alamos National Lab., NM (USA). 1989. 16p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890299–11: AHF accelerator design workshop, Los Alamos, NM, USA, 20-25 Feb 1989). Order Number DE89014235/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We studied the possibility of the occurrence of transverse instability induced by trapped electrons in unbunched beams in the Proton Storage Ring and the proposed Advance Hadron Facility (AHF) at Los Alamos, as well as in the proposed Kaon Factory at TRIUMF. We found that the e-p instability may be possible for unbunched beams in the PSR but is unlikely to occur in the advanced hadron facilities. 8 refs., 4 figs.

37064 (LBL–27189) **General properties of an asymmetric B-factory lattice.** Autin, B. Lawrence Berkeley Lab., CA (USA). Apr 1989. 6p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8904227–1: Workshop on high luminosity asymmetric storage rings for AB-physics, Pasadena, California, USA, 25-28 Apr 1989). Order Number DE89012996/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Scaling laws consistent with general rules of optimization have been established for colliders of unequal beams. They are valid for any ring deduced from the circular shape by insertion of straight sections. The constraint on the synchrotron motion seems to be met more easily for the head on configuration than for a finite crossing angle. In any case, the equal damping decrement requirement leads to the use of high field dipoles in the low energy ring. If the rules on equal beam size and equal beam-beam tune shift are generally accepted, those on equal damping decrements and equal amplitude of the betatron phase modulation by the synchrotron motion are still controversial matters: below a certain threshold which is still undefined, they may be unimportant. Finally, additional flexibility could be provided by wigglers and radio frequency adjustments. 5 refs.

37065 (SLAC-PUB–4882) **Applications of a plasma lens with bootstrap disruption.** Rajagopalan, S.; Chen, P.; Rosenzweig, J. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Mar 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515;W-31109-ENG-38. (CONF-890335–203: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989). Order Number DE89013746/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In this work, we examine the viability of employing the mechanism of "bootstrap disruption" with an underdense plasma lens to enhance the luminosity in linear colliders. We discuss the optics of an underdense plasma lens for electrons and positrons. We present results of such a scheme for the SLC, and hetero-energetic B-factory designs. 11 refs., 4 figs., 2 tabs.

37066 (SLAC-PUB–4928) **PHASEFIX: Correcting the tunes of the SLC Arcs.** Haiessinski, J.; Bambade, P.; Brown, K.L.; Burke, D.L.; Fieguth, T.H.; Hutton, A.; Mattison, T.; Murray, J.J.; Phinney, N.; Placidi, M. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Apr 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-890335–204: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989). Order Number DE89013752/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The betatron phase advance in the SLC ARC beam transport line is sensitive to gradient errors in the magnetic lattice. The systematic errors in the phase advance, combined with the rolls required to follow the terrain, can lead to xy-coupling which significantly distorts the betatron phase-space. The technique used to measure and correct the tune of the Arcs is reported. 9 refs., 7 figs.

A full-cusp diode geometry and fast-puff valve system were developed for the proton linac experiment. After passing through the first gap section, a transport efficiency of 99% was achieved. Microwave-input mode stability was tested on a rectangular cross section undulating guide accelerator cavity. Switching to a circular cross section would appear to have certain advantages.

37068 (BNL–52169) **Beam position monitor analysis.** Di Massa, G.; Ruggiero, A.G. Brookhaven National Lab., Upton, NY (USA). Mar 1989. 21p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH00016. Order Number DE89014582/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A large proportion of devices used to interact with charged-particle beams in accelerator or storage rings can be classified as pick-ups or kickers. These devices extract information about the particle motion or affect a change in the motion. One device used frequently as pick-up or kicker is made with two little plates with one or more terminations per plate. In this paper the structure with one termination per plate is examined. The azimuthal dependence is taken into account in circular geometry for one plate of given dimensions. The charges and currents induced on the plates are studied using azimuthal and frequency harmonic expansions. The potential equations are derived and developed in the frequency domain in order to give the close expression of the output voltage. And finally, the numerical results are discussed. 9 refs., 4 figs.

37069 (CONF-890335–209) **Superconducting low-velocity linac for the Argonne positive-ion injector.** Shepard, K.W.; Markovich, P.K.; Zinkann, G.P.; Clifft, B.; Benaroya, R. Argonne National Lab., IL (USA). 1989. 3p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. From 13. particle accelerator conference; Chicago, Illinois, USA; 20-23 Mar 1989. Order Number DE89014639/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A low-velocity superconducting linac has been developed as part of a positive-ion injector system, which is replacing a 9 MV tandem as the injector for the ATLAS accelerator. The linac consists of an independently phased array of resonators, and is designed to accelerate various ions over a velocity range $.008 < v/c < .06$. The resonator array is formed of four different types of superconducting interdigital structures. The linac is being constructed in three phases, each of which will cover the full velocity range. Successive phases will increase the total accelerating potential and permit heavier ions to be accelerated. Assembly of the first phase was completed in early 1989. In initial tests with beam, a five-resonator array provided approximately 3.5 MV of accelerating potential and operated without difficulty for several hundred hours. The second phase is scheduled for completion in late 1989, and will increase the accelerating potential to more than 8 MV. 5 refs., 2 figs., 1 tab.

37070 (CONF-890335–214) **The measurement of Twiss parameters using SFC's.** Rosing, M.; Hummer, C.; Zolecki, R. Argonne National Lab., IL (USA). 1989. 8p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. From 13. particle accelerator conference; Chicago, Illinois, USA; 20-23 Mar 1989. Order Number DE89013649/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The Segmented Faraday Cup (SFC) consists of 48 copper plates that are 1 mm x 75 mm x 10 mm. These plates are stacked against each other on the 75 mm x 10 mm face with a layer of kapton between them for electrical insulation. When the assembly is viewed in the direction of the incident beam, the beam sees 48 vertical electrodes that are 1 mm x 75 mm and 10 mm thick. The copper plates and the kapton are held together in an aluminum frame which is mounted on a rotating shaft. This assembly can be placed in the beam by rotating the shaft. Another SFC of the same construction is also mounted on this shaft. This other SFC, however, has its plates mounted horizontally rather than vertically. Thus by rotating the shaft either the vertical SFC, the horizontal SFC, or a scintillator screen may be placed into the beam. In addition, the shaft can be rotated so that none of these elements are in the beam. The SFC's were used to measure the emittance of the beam by using a scanning slit. The theory and the method for this measurement are presented. A description of the electronics is presented. A sample of a beam profile and the results of an emittance measurement are presented. 2 refs., 5 figs.

37071 (CRN-VIV–60) **Beam transmission in MP equipment. New measurements. Main effects and application to VIVITRON.** Haas, F.; Muller, C.; Nadji, A.; Rebmeister, R. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. Jan 1989. 17p. (In French). Order Number DE89789270/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The MP equipment is presented and the vacuum values at different measuring points are indicated. The low energy transmission stage (foil and gas strippers) high energy stage (5, 10, and 15 micro-g/cm^2 foils and gas stripper) are described, as well as the global system. For the Vivitron, in order to reach equilibrium thickness, pression in the stripping channel should be higher than that in the MP channel, and pump power should be planned accordingly.

37072 (DOE/ER/40124–17) **Superconducting booster project: [Final report].** Storm, D.W. Washington Univ., Seattle, WA (USA). Nuclear Physics Lab. [1989]. 13p. Sponsored by DOE Energy Research. DOE Contract AC06-84ER40124. Order Number DE89014120/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The central objective of the superconducting booster project was to expand the existing accelerator facility by the addition of a superconducting linear accelerator. This linear accelerator is injected by the existing tandem electrostatic accelerator, and it is designed to increase the beam energy by a factor of about two for protons and by a factor up to four for heavier ions up to about mass 50. The accelerating elements are lead-plated quarter-wave resonators. This report discusses progress on this booster.

37073 (DOE/ER/40374–19) **An optimized H⁻ magnetron ion source/lebt system.** Tompkins, P.A.; Huson, F.R.; Raparia, D. Texas Accelerator Center, The Woodlands, TX (USA). 1989. 3p. Sponsored by DOE Energy Research. DOE Contract FG05-87ER40374. (CONF-890335–219: 13. particle accelerator conference, Chicago, IL, USA, 20-23 Mar 1989). Order Number DE89013945/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Availability and usefulness of accelerators is greatly dependent on machine efficiency. Research must focus on less expensive, more compact accelerators with brighter beams. To achieve this goal for H^- ion sources, TAC has optimized the present Brookhaven AGS source for use with their REQ program. The TAC source incorporates an extraction system with a circular aperture which provides an azimuthally symmetric beam. The complete system has been simplified including removal of the gradient bending magnet found in conventional sources of this type. This source will soon be combined with an electrostatic low energy beam transport. This will create a simpler and more compact H^- ion source and beam transport system than is presently available. 7 refs., 5 figs., 1 tab.

37074 (FNAL/C–89/126) **Automatic steering corrections to minimize injection oscillations in the Fermilab Antiproton Source rings.** Harding, D.J.; Riddiford, A.W. Fermi National Accelerator Lab., Batavia, IL (USA). Mar 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-890335–213: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989). Order Number DE89014171/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Missteering of particle beam at injection into a circular accelerator produces coherent betatron oscillations. The beam position monitor system in the Antiproton Source at Fermilab can measure the beam position on each turn around the ring during these oscillations. From the amplitude and phase of the oscillations, corrections to the beamline steering are calculated to remove the oscillations. The analysis includes the case where the horizontal and vertical tunes are quite strongly coupled. This technique has proved to be valuable both in operation of the Fermilab Collider and as an analytical tool. 4 refs., 2 figs.

37075 (GANIL-T–89-02) **Heavy ions beam axial injection tudy in a compact cyclotron.** Chel, S. Paris-7 Univ., 75 (France); Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). Nov 1988. 112p. (In French). Order Number DE89789213/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

The aim of the OAE and OAI projects developed at GANIL is respectively to increase the "medium" heavy ion energies to get 45 MeV/A beams up to Xenon, and to increase the beam intensities. This study deals with the injection stage of the second of these operations. In this new design, the ECR source potential is 100 kV to avoid losses due to space charge. The inflector used for the injection in the cyclotron NC01 is a spiral type with two parameters. The equations of motion are straighforward to obtain and numerical simulation programs have been developed. It is then possible to compute the transfer matrix of this inflector and to study the behavior of the beam inside it. It is necessary to introduce an electrostatic quadrupole after the inflector exit to realize a good matching to the cyclotron with the condition of always staying inside the inflector acceptance. For these matching conditions, the inflector transmission is increased if one introduces a rotation of the inflector exit face. It is then possible to transfer beams with the required emittances and intensities in the OAI project. The knowledge of the inflector characteristics makes it possible to design an axial injection line to obtain a matched beam.

37076 (IFVE-OMVT–88-53) **Some mathematical aspects of creation of the control system for a physical installation. Analytical review.** Efimov, K.M.; Efimova, T.E.; Zagurskij, A.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij. 1988. 23p. (In Russian). Order Number DE89620137/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The article presented is a result of investigations connected to the problems of the software creation for the linear accelerator automatic control system. The problems considered arise before each scientific group engaged in the development of the automatic control complex for a physical installation. The possible ways of solving such problems are discussed. 54 refs.

Voprosy atomnoj nauki i tekhniki.; no. 4(35).

On the basis of experimental investigaions exponential and performance testing comparison of emission characteristics of thermoelectron oxide barium-nickel and desorption slit cathode is carried out. Recommendation to their application in high-current injectors of linear induction accelerators is made. It is stated that oxide cathodes at emission current densities of $\geq$ 20 A/cm^2 emit electrons due to Schottky effect that sharply worsens uniformity of emission

density and its stability along cathode surface as well as decreases cathode service life. Desorption slit cathodes provide for stable emission with the uniformity of ±10% and have unlimitted service life, the current densities being 20-50 A/cm^2. They are under testing at pulse repetition frequency of 20 kHz. 5 refs.; 2 figs.; 1 tab.

37080 (INIS-SU–87/A, pp. 6-7) **Amplification klystron for resonance electron accelerators.** Bystrov, V.M. (Nauchno-Issledovatel'skij Inst. Available from NTIS (US Sales Only), PC A05/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Development of a new amplification klystron operating in the frequency of 2450 Hz, the pulse power of 5 MW and average power of 5 kW is completed. The klystron is distinguished by low anode voltage and package design. The klystron gain factor is ~ 50 db. HF-pulse duration up to 7 μs. Weight of klystron with the mounted permanent magnet focusing system is about 85 kg. The first klystron performance testing confirmed that it may be advantageously used in linear electron accelerators for radiotherapy and industrial radiography. 1 ref.; 1 fig.; 1 tab.

37081 (INIS-SU–87/A, pp. 37-39) **Test results for experimental set of powerful pulse klystrons of RF channel of the meson factory's linear accelerator.** Amosov, I.I. (AN SSSR, Moscow (USSR). Inst. Yadernykh Issledovanij); Vetokhov, V.M.; Kiselev, I.V.; Leont'ev, V.N.; Peplov, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Available from NTIS (US Sales Only), PC A05/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Methods and results of measuring performances of experimental set of powerful pulse klystrons of RF channel of the meson factory's linear accelerator are presented. The measurement errors are estimated. The output pulse power dependences on the excitation power, on focusing solenoid current, amplitude-frequency and filament characteristics of klystrons are presented. Analysis of obtained results permit to conclude that the test klystrons satisfy accelerator conditions and may be included into their complex. It is shown that change of cold tuning permits to improve parameters of some instruments important for amplitude-phase efficient autoregulation. 2 refs.; 5 figs.

37082 (INIS-SU–87/A, pp. 55-57) **On the possibility of construction of the parallel-coupled structure for the small-energy electron linear accelerator.** Ivannikov, V.I. (AN SSSR, Novosibirsk (USSR). Inst. Khimicheskoj Kinetiki i Goreniya); Chernousov, Yu.D.; Shebolaev, I.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Experience in construction of accelerating parllel-coupled structures (PCS) shows that they may be used in the low-energy electron linear accelerator. The PCS consists of transmitting waveguide and lengthwise accelerating cavity resonators. Each resonator is coupled only with transmitting waveguide with travelling waves. Method of resonator reflection compensation and synchronization accelerating field with charged particles are considered. One structure variant is tested using a beam and high SHF power. The accelerated electron output energy attains 1.7 MeV, the current - 0.6 and 0.1 A, the pulse duration being 5 ns and 2 μs, respectively. 2 refs.; 5 figs.

37083 (INIS-SU–87/A, pp. 35-36) **Measuring RF field distribution in the 4-chamber H-resonator using microcomputer.** Andreev, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki); Belyaev, V.I.; Burov, A.A.; Gusev, M.L.; Kozodaev, A.M.; Kolomiets, A.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Voprosy atomnoj nauki i tekhniki.; no. 4(35).

Artificial lines are most often used as energy accumulators in high-voltage pulse shapers. Due to this fact there are some features that must be taken account of in developing the line charging voltage stabilization systems. The present report is concerned with such system designed for I-2 accelerator high-voltage modulators. Peculiarities of charging voltage stabilization at pulse modulator shaping line are considered. The system has an analog signal convey option channel. Frequency characteristics of the channel and the system stability are discussed. The line charging voltage variation pitch is 5 V for 2-5 kV range and 10 V for 2-10 kV range. The voltage instability is not over ± 0.1%. The line charging time up to 8 kV is 0.1 s, up to 10 kV - 0.35 s. 2 refs.; 3 figs.

37085 (IYaF–88-24) **Driver and controller for the Odrenok computer.** Kozak, V.R. AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki. 1988. 12p. (In Russian). Order Number DE89620148/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In the Institute of Nuclear Physics SO AN SSSR a series of controllers for valrious computer types is developed. A driver-controller set for connection of periphery crate to the system crate with the ODRENOK microcomputer, as well as the package of subprograms for their maintenance, are described. The B0614 driver and K0614 controller permit to connect periphery crates at the distance of 0 - 100 m with the time of CAMAC-istruction execution ≤ 10 μs. Connection is realized via two coaxial cables. The transmitter and receiver have a galvanic decoupling on fast responding optopairs. Both units are realizeed in CAMAC modules 2M width. 3 refs.; 4 figs.

37086 (JINR–13-88-470) **Program for calculating parameters of atomic beam of polarized particle source and jet polarized targets on 'Pravets-16'.** Kulikov, M.V.; Fimushkin, V.V.; Tsvineva, G.P. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 6p. (In Russian). Order Number DE89620127/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Program for calculating the parameters of atomic beam of polarized particle sources and jet polarized targets is described. The program is adapted on PC 'Pravets-16' having a coprocessor. It permits to calculat any of four states of hydrogen atoms and any of six states of deuterium atoms. It calculated the distributions of intensity and density of the beam behind the focusing magnets, average values of intensity and density, effective thickness of the beam as target and other parameters. The data are extracted into separate file in a readable format. 6 refs.; 5 figs.

37087 (JINR-R–9-88-383) **Results of experimental investigation of injector part of the LIU-30 accelerator.** Vakhrushin, Yu.P.; Volzhev, A.A.; Demskij, M.I. and others. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics. 1988. 10p. (In Russian). Order Number DE89620135/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Matching of injector part(IP) to 3 MeV energy is carried out in the 30 MeV linear induction accelerator (LIU-30) where 250 A current electron beam is to be obtained with 500 ns duration pulse. Measurement of beam parameters was carried out with diagnostics apparatus complex. It consist of the systems for measuring emittance, profile and energy spectrum of the beam, amplitude of coherent oscillations after each current pulse in time intervals of 40 ns duration. Due to replacement of electron source with Pierce optics on the basis of compacted oxide-nickel cathode and application of grid in anode orifice magnetic field flattening on injector part up to ±15% tuning of the pulse system of accelerating section supply the following parameters are achieved: rectangular shape current pulse of 240 A for 400 ns peak duration and 500 ns pulse duration on 0.5 height. The focusing longitudinal magnetic field grows monotonically from 0.03 up to 0.04 T. Energy spread was 9% from E_{max} by the distribution curve base and 5% on the 0.5 height. Emittance was not worse than 0.2 cm. rad. 3 refs.; 7 figs.

37088 (LA-UR–89-965) **High-brightness electron injectors: A review.** Sheffield, R.L. Los Alamos National Lab., NM (USA). 1989. 6p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890335–215: 13. particle accelerator conference, Chicago, IL, USA, 20-23 Mar 1989). Order Number DE89014244/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The last decade has seen increased emphasis on the development of high-brightness electron beams because of rigorous requirements of the new generation of colliders and the advent of free-electron lasers. This talk describes the approaches now being explored for attaining intense, bright electron beams. The methods for producing bright electron beams include photocathode-based, short-pulse injectors; dc electrostatic accelerator sources; long-pulse beams, which are then compressed in time using subharmonic bunching; combining first and third harmonics in an accelerator to attain the equivalent of high-gradient dc fields; and LaB_6 rf guns. For several of the approaches, the temporal length of the electron pulse is decreased after acceleration to relativistic energies by impressing an energy spread on the electron bunch and using a nonisochronous beam-transport system to increase the peak current. 37 refs., 7 figs.

37089 (LA-UR–89-2071) **Influence of a biased beam dump on H^- beam neutralization measurements with a four-grid energy analyzer.** Sherman, J.; Pitcher, E.; Allison, P. Los Alamos National Lab., NM (USA). 1989. 16p. Sponsored by Department of Defense. DOE Contract W-7405-ENG-36;AC03-76SF00098. (CONF-890703–9: International conference on ion sources, Berkeley, California, USA, 9-15 Jul 1989). Order Number DE89014299/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A four-grid energy analyzer (FGA) diagnostic has been developed for the study of H^- beam space-charge compensation, and first measurements have been reported previously. Biased beam-dump measurements were undertaken to clarify the origin of electron currents measured in the FGA because they far exceeded predictions based on H^- beam ionization and stripping processes. This experiment partially explains the anomalously large radial electron current. The FGA observations for beam-dump bias <0 suggest electron ionization of the background gas is an additional mechanism for producing positive ions, where the electron kinetic energy is derived form the beam-dump voltage. 6 refs., 4 figs.

37090 (LA-UR–89-2080) **The Mark 101 flux compression generator: Development progress.** Freeman, B.L.; Fowler, C.M.; Rickel, D.G.; Hodgdon, M.L. Los Alamos National Lab., NM (USA). 1989. 9p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890710–10: 5. international conference on megagauss magnetic field generation and related topics, Novosibirsk, USSR, 3-7 Jul 1989). Order Number DE89014298/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The Mark 101 explosive flux compression generator is a line-initiated, helical generator that offers the possibility of a theoretical $dL/dt \geq 0.5\ \Omega$. The design and initial tests were reported by Fowler, et al. and Freeman, et al. Subsequent to the early results, which demonstrated current gains of only ~1.2:1, the generator design was modified and now includes a low-density foam staging layer between the PBX 9501 explosive and the aluminum armature and a vinyl coating on the stator winding. This redesigned Mark 101 has an initial working inductance of 5.36 μH and a load inductance of 0.60 μH. The lossless current gain of this unit is 9.9:1, and the estimated practical gain is ~5.5. Experiments have been performed using SF_6 and vacuum as the insulating media between the armature and stator. Measured current gains of ~5.0:1 have been achieved. The maximum measured dI/dt of $\sim 1.2 \times 10^{11}$ Amps/sec and V of ~62 kV were significantly less than expected during high-current tests. However, a case motion experiment has shown that the armature is probably disintegrating during the last few microseconds of the armature run. Thus, the configuration of the staging layer between the explosive and the armature has been the subject of study. The results of the generator tests are presented. 5 refs., 8 figs.

37091 (ORNL/FTR–3272) **[International conference on electrostatic accelerators (ICEA), Strasbourg, France and Heidelberg, Germany, and discussion of electron cyclotron resonance ion sources, Grenoble, France, May 23–29, 1989]: Foreign trip report.** Ziegler, N.F. Oak Ridge National Lab., TN (USA). 14 Jun 1989. 7p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014730/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The traveler visited the Centre d'Etudes Nucleaire Grenoble to view and learn of the electron cyclotron resonance ion sources being built there. A permanent magnet electron cyclotron resonance ion source called NEOMAFIOS may have application in the HHIRF tandem accelerator. In addition, the traveler attended the International Conference on Electrostatic Accelerators, which was convened in Strasbourg, France, with final sessions in Heidelberg, Germany. In general, the many papers presented dealt with status, problems, improvements, and applications of electrostatic accelerators and their associated booster accelerators.

37092 (SAND–88-3360C) **Compound-lens diode for HERMES III.** Sanford, T.W.L.; Halbleib, J.A.; Poukey, J.W.; Sheridan, T.; Muirhead, D.; Yagow, C.E.; Mikkelson, K.A.; Mock, R.; Spence, P.W.; Bailey, V.L. Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890665–25: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89013065/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Significantly improved spatial uniformity of bremsstrahlung radiation, relative to a diode with a planar anode, is predicted for the HERMES III accelerator when a compound-lens diode is used to actively control the high-power electron beam at the exit of a coaxial, magnetically-insulated transmission line. Electron flow within the diode and subsequent radiation output is characterized as a function of diode parameters. The results of these calculations are applicable to coaxial geometries where active control of high-energy, high-current, $\nu/\gamma \geq 1$ beams is desired. 8 refs., 6 figs.

37093 (SAND–89-0523) **BUCKSHOT simulations of beam injection on the recirculating linac.** Wagner, J.S.; Mazarakis, M.G. Sandia National Labs., Albuquerque, NM (USA). Apr 1989. 42p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE89014615/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

One critical issue to be addressed in the compact recirculating linac program concerns optimal beam injection into a racetrack-shaped accelerator. There are at least three candidates, axial beam

injection, tangential beam injection, and laser-channel-assisted beam injection. In this report these three approaches are examined using computer simulation techniques. 3 refs., 27 figs., 2 tabs.

37094 (SLAC-PUB–4893) **RF phase distribution systems at the SLC.** Jobe, R.K.; Schwarz, H.D. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Apr 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-890335–207: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989). Order Number DE89013755/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Modern large linear accelerators require RF distribution systems with minimal phase drifts and errors. Through the use of existing RF coaxial waveguides, and additional installation of phase reference cables and monitoring equipment, stable RF distribution for the SLC has been achieved. This paper discusses the design and performance of SLAC systems, and some design considerations for future colliders. 6 refs., 4 figs.

37095 (SLAC-PUB–4926) **Recent commissioning experience on the SLC Arcs.** Toge, N.; Bambade, P.; Barklow, T.; Brown, K.L.; Bulos, F.; Burke, D.L.; Fieguth, T.; Haiessinski, J.; Hutton, A.; Jung, C. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Apr 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-890335–205: 13. particle accelerator conference, Chicago, Illinois, USA, 20-23 Mar 1989). Order Number DE89013753/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The Arc transport line, which brings high-energy, high-intensity electron and positron bunches from the SLAC linac to the Stanford Linear Collider final focus section, has been in operation for the past few years. In this paper, we will review the techniques developed for the optical tune-up and diagnostics, recent performance, and on-going improvement programs. 13 refs., 4 figs., 1 tab.

37096 (SLAC-PUB–4961) **An alignment method for the Mark II silicon strip vertex detector using an x-ray beam.** Adolphsen, C.; Gratta, G.; Labarga, L.; Litke, A.; Schwarz, A.; Turala, M.; Zaccardelli, C.; Breakstone, A.; Parker, S.; Barnett, B. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Apr 1989. 21p. Sponsored by DOE Energy Research. DOE Contract AA03-76SF00034;AC03-83ER40103. (CONF-890247–3: 5. European symposium on semiconductor detectors: new developments on radiation detectors, Munich, Germany, F.R., 21-23 Feb 1989). Order Number DE89014588/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A silicon strip vertex detector consisting of 36 independent detector modules is being constructed for use in the Mark II detector at the SLAC Linear Collider. This paper describes a method for determining the relative alignment of the modules to a precision better than the 5 μm intrinsic resolution of the detectors. The basic procedure involves moving the vertex detector by known amounts through a fixed, collimated x-ray beam, and using the beam position reconstructed from the detected signals to determine the relative positions and orientations of the modules. Results from tests of the method on a subset of detectors are presented. 5 refs., 11 figs.

37097 Neutron transmission of single crystal MgO filters. Carpenter, J.M. (Argonne National Lab., IL (USA). Intense Pulsed Neutron Source); Mildner, D.F.R.; Cudrnak, S.S.; Hilleke, R.O. *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment (Netherlands),* 278(2): 397-401 (1 Jun 1989).

We have measured and analyzed the wavelength dependence of the transmission probability of a beam of neutrons passing through a single crystal MgO filter at 77 K. The 12.7 cm filter transmits 70% or more of the incident beam at wavelengths greater than about 1.8 A. At shorter wavelengths the transmission probability drops sharply, with 50% transmission occurring at about 1.2 A, and 1% transmission for the range 0.1-0.4 A. We have determined that cooling the filter to 77 K improves the transmission of >1 A neutrons, while further cooling to 25 K shows little additional improvement, and no improvement for short wavelengths. We have identified the wavelengths of the sharp dips in the transmission found in this region caused by Bragg scattering in MgO. We also show how these peaks may be used to calibrate the wavelength scale of time-of-flight measurements taken on instruments using similar filters.

37099 (AERE-R–13103) **Neutron spectrometry measurements with large volume cylindrical proton-recoil counters developed for use in radiological protection.** Delafield, H.J.; Birch, R. UKAEA Harwell Lab. (UK). Environmental and Medical Science Div. Feb 1989. 26p. Available from H.M. Stationery Office, London, price Pound 8.00.

A transportable neutron spectrometry system, based on four large-volume cylindrical proton-recoil counters, has been developed and calibrated for high-resolution measurements of neutron spectra in radiological protection. The counters cover an energy-range from about 50 keV to 2 MeV and can be used in dose-equivalent rates from about 5-50 μSv h^{-1}. The angular response of this system has now been studied. Measurements with the cylindrical counters at different angles of incidence to the neutron source were made for the leakage spectrum of fission neutrons through the NESDIP3 shield at the NESTOR reactor (AEE Winfrith). In addition, a direct comparison has been made of spectrum measurements (NESDIP3 shield and an ^{241}Am-Li (α,n) source), with those obtained using the smaller volume spherical counters (type SP2).

37100 (AERE-R–13159) **High-dose intercomparison study involving red 4034 perspex and radiochromic dye films.** Barrett, J.H.; Sharpe, P.H.G.; McLaughlin, W.L.; Glover, K.M.; Watts, M.F.; Whittaker, B. UKAEA Harwell Lab. (UK). Chemistry Div. Oct 1988. 32p. Available from H.M. Stationery Office, London, price Pound 10.00.

The present dosimetry intercomparison exercise involved the National Bureau of Standards (NBS) Gaithersburg MD, USA; the National Physical Laboratory (NPL) Teddington, and Harwell Laboratory, UK. It was undertaken as an extension of previous intercomparison exercises and forms part of an on-going calibration and quality-assurance programme for those in-plant dosimetry systems widely used in radiation sterilisation. Two dosimetry systems, Harwell red 4034 Perspex and Far West Technology radiochromic dye film (FWT-60-00) were used. The dosimeters were irradiated with cobalt-60 gamma radiation at absorbed dose rates in the range 1-4 Gy s^{-1} to absorbed doses in the range 10-35 kGy. Irradiations were carried out at each of the participating laboratories, and the irradiated dosimeters were carried by hand between laboratories to eliminate any possibility of maltreatment which might occur if conventional modes of transport such as air freight were used. A minimum of four dosimeters were irradiated at each dose and the elapsed time between irradiation and spectrophotometric reading of the dosimeters varied from one to nine days. The following comparisons were made: laboratory spectrophotometric readings at the accepted measurement wavelengths (radiochromic film: 605

nanometers (nm); red 4034 Perspex: 640 nm); dosimeter thickness measurements; estimates of absorbed dose. Measurement precision was in all cases better than ± 1.5% one sigma. The agreement obtained between laboratory estimates of absorbed dose and between spectrophotometric readout was within ± 2% for both dosimetry systems.

37101 (CRN-HE--87-08) **Ring imaging Cherenkov detector. The DELPHI Barrel RICH Prototype. Part B: Experimental studies of the detector performance for particle identification.** Arnold, R.; Christophel, E.; Dracos, M.; Guyonnet, J.L.; Baillon, P.; Bosteels, M.; Giomataris, Y.; Passardi, G.; Besch, H.J.; Seguinot, J. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1987. 56p. Order Number DE89789271/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

We present, in this Part B of the DELPHI Barrel RICH Prototype studies, a test beam investigation of the detector performance for particle identification. The tests have been done with both a proximity focused radiator of 1.cm of liquid perfluoro-hexane C_6F_{14} and a focusing gas radiator of isobutane (50 cm mirror focal length). In the accompanying paper, Part A, are given a technical description of the Propotype, the single photoelectron detector response and the spatial resolution attainable which are used throughout this article. The results show that the Prototype performance predicted by Monte Carlo simulations, as a function of the drift distance z_d and the particle incidence angle θ_b, have been achieved (particle identification between .7 and 30 GeV/c). The calculations use the known and measured properties of the detector components which have been discussed throughout Parts A and B. The single photon Cherenkov angle resolution obtained at $z_d = 0$ drift distance is 8.5 mrad and 4.5 mrad for the liquid and the gas (at $\theta_b = 0^0$) radiators respectively, as expected from the design. The numbers of detected photoelectrons in the images are 21 and 12 which correspond to a detector merit factor N_0 of 53 cm^{-1} and 77 cm^{-1} for the liquid and gas radiators respectively. These numbers are in agreement with the calculations but are limited because of the actual multiwire photoelectron detector performance. We show that N_0 = 65 cm^{-1} and 96 cm^{-1} are achievable for the liquid and gas radiators respectively. These last figures include a 90% cathode strip readout efficiency (third measurement coordinate for parallax correction) but no correction for dead space between drift volumes (liquid images only) and electronic dead time.

37102 (DOE/ER/03130--5) **An Outstanding Junior Investigator Award in experimental high energy physics: Progress report, January 1, 1989 to December 31, 1989.** Partridge, R. Brown Univ., Providence, RI (USA). Dept. of Physics. 1 Jul 1989. 22p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER03130. Order Number DE89013931/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

An experimental program based upon the study of hadron collisions at the highest available energy is being carried out with the support of an Outstanding Junior Investigator Award to Dr. Richard Partridge. The work described in this report includes the development of the Level 0 trigger for the DØ experiment at Fermilab, preparation for the DØ physics program, and studies of detector design and physics at the Superconducting Super Collider (SSC).

37103 (DOE/ER/03130--41C) **A microprocessor farm architecture for high speed data acquisition and analysis.** Cutts, D.; Hoftun, J.S.; Johnson, C.R.; Zeller, R.T. Brown Univ., Providence, RI (USA). Dept. of Physics. 1988. 2p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER03130. (CONF-881103--64: IEEE nuclear science symposium, Orlando, FL, USA, 9-11 Nov 1988;COO--3130TC-41). Order Number DE89013961/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The D0 Level-2 data acquisition system has been described in several previous articles. This paper will briefly discuss the requirements and architecture of the system as well as its current status, and then consider its implementation using a new generation of hardware which is currently under development. Details of the system software appear elsewhere, and will not be considered. 4 refs., 4 figs.

37104 (DOE/ER/03130--43C) **Neural networks, D0, and the SSC.** Barter, C.; Cutts, D.; Hoftun, J.S.; Partridge, R.A.; Sornborger, A.T.; Johnson, C.T.; Zeller, R.T. Brown Univ., Providence, RI (USA). 1989. 12p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER03130. (CONF-8901118--4: Workshop on triggering and data acquisition for experiments at the Superconducting Super Collider, Toronto, Canada, 16-19 Jan 1989). Order Number DE89013954/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We outline several exploratory studies involving neural network simulations applied to pattern recognition in high energy physics. We describe the D0 data acquisition system and a natual means by which algorithms derived from neural networks techniques may be incorporated into recently developed hardware associated with the D0 MicroVAX farm nodes. Such applications to the event filtering needed by SSC detectors look interesting. 10 refs., 11 figs.

37105 (DOE/ER/03130--44C) **Data acquisition at D0.** Cutts, D.; Hoftun, J.S.; Johnson, C.R.; Zeller, R.T. Brown Univ., Providence, RI (USA). 1989. 10p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER03130. (CONF-890415--6: Computing in high energy physics, Oxford, UK, 10-14 Apr 1989). Order Number DE89013955/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A large array of MicroVAX computers will be used for high-speed data acquisition and online filtering in the D0 experiment at Fermi National Accelerator Laboratory. We discuss new developments related to this system, in hardware and particularly in software. The new hardware includes multiported memory boards for faster and more direct input and output of event data. Most of the software development is related to the crucial role of the event filters, requiring an elaborate mechanism for control and monitoring of the FORTRAN based programs running in each of the MicroVAXes. 4 refs., 2 figs.

37106 (DOE/ER/03130--45C) **Neural networks for event filtering at Dv.** Cutts, D.; Hoftun, J.S.; Sornborger, A.; Johnson, C.R.; Zeller, R.T. Brown Univ., Providence, RI (USA). 1989. 13p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER03130. (CONF-890415--7: Computing in high energy physics, Oxford, UK, 10-14 Apr 1989). Order Number DE89013956/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Neural networks may provide important tools for pattern recognition in high energy physics. We discuss an initial exploration of these techniques, presenting the result of network simulations of several filter algorithms. The D0 data acquisition system, a MicroVAX farm, will perform critical event selection; we describe a possible implementation of neural network algorithms in this system. 7 refs., 4 figs.

37107 (DOE/ER/40150--82) **Workshop on CEBAF [Continuous Electron Beam Accelerator Facility] spectrometer magnet design and technology: Proceedings.** Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility. Sep 1986. 494p. Sponsored by DOE Energy Research. DOE Contract AC05-84ER40150. (CONF-8604413--: Workshop on CEBAF spectrometer magnet design and technology, Newport News, VA, USA, 7-11 Apr 1986). Order Number DE89014429/JAW. Available from NTIS, PC A21/MF A01 - OSTI.

The planned experimental program at CEBAF includes high-resolution, large acceptance spectrometers and a large toroidal magnetic, detector. In order to take full advantage of the high quality beam characteristics, the performances required will make these devices quite unique instruments compared to existing facilities in the same energy range. Preliminary designs have shown that such performances can be reached, but key questions concerning design concepts and most appropriate and cost-effective technologies had to be answered before going further with the designs. It was the purpose of the Workshop on CEBAF Spectrometer Magnet Design and Technology, organized by the CEBAF Research and Engineering Divisions, to provide the most complete information about the state-of-the-art tools and techniques in magnet design and construction and to discuss the ones most appropriate to the CEBAF spectrometers. In addition, it is expected that this Workshop will be the staring point for further interactions and collaborations between international magnet experts and the CEBAF staff, during the whole process of designing and building the spectrometers.

37108 (DOE/ER/40315–157) **Technical advisory panel for the large acceptance spectrometer: Final report.** Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Physics. 20 Jan 1989. 31p. Sponsored by DOE Energy Research. DOE Contract FG02-87ER40315. Order Number DE89014471/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The Technical Advisory Panel for the Large Acceptance Spectrometer met on November 17–19, 1988, at CEBAF to perform a second review of the status of this project. The charge to the Panel was "to provide technical advice to the CEBAF directorate on the design, construction, cost, schedule, and implementation of the Large Acceptance Spectrometer." In this written report, an overview of the entire project is given. Specific comments on the major components, data handling and analysis, assembly and installation, and management are presented. The Panel's conclusions are contained in the Executive Summary at the beginning of the report.

37109 (DOE/ER/40372–T1) **Development of new scintillating fiber detectors for high energy physics applications.** Ruchti, R.; Baumbaugh, B.; Bose, A.; Ditmire, T.; Kennedy, C.; Puseljic, D.; Ryan, J.; Baumbaugh, A.; Knickerbocker, K.; Ellis, J. Notre Dame Univ., IN (USA). Dept. of Physics. 1988. 5p. Sponsored by DOE Energy Research. DOE Contract AC02-87ER40372;AC02-76CH03000. (UND-HEP–11-29-88;CONF-881103–63: IEEE nuclear science symposium, Orlando, FL, USA, 9-11 Nov 1988). Order Number DE89013678/JAW. Available from NTIS, PC A02/MF A01 - OSTI.

We have been developing new scintillating fiber detectors for colliding beam and fixed target applications. In this paper, we present initial results from a development study of high refractive index, liquid scintillator, and the incorporation of these liquids into glass capillaries. Advantages of liquid in-capillary fiber detectors include: high efficiency and fast decay; the potential for high-resolution tracking as light emission is expected to be local to the deposited ionization in liquids containing single solutes; the potential for good radiation resistance and replaceability. 13 refs., 2 figs., 3 tabs.

37110 (GSI–89-36(prepr.)) **Plastic Ball experiments.** Gutbrod, H.H.; Poskanzer, A.M.; Ritter, H.G. Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.). Apr 1989. 100p. Available from Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.).

The Plastic Ball spectrometer is a 4π detector with particle identification for charged particles. It was first used at the Berkeley Bevalac to study nucleus-nucleus collisions at beam energies of hundreds of MeV per nucleon. Recently it has been moved to the CERN SPS for studies of target fragmentation at energies of hundreds of GeV per nucleon. This article gives a complete review of the spectrometer and the physics obtained at the Bevalac, with some recent additions from the work at CERN.

37111 (INIS-SU–82, pp. 19-21) **Calibration and testing of the DMG gamma dosimeter.** Dolgirev, E.I. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

25-1000 nGy/h (2.5-1000 μrad/h) absorbed dose gamma dosimeter for measuring the efficient equivalent irradiation dose for population is developed. It has two subranges 1000 nGy/h and 250 nGy/h. Results of dosimeter calibration and testing are presented. The dosimeter error for both subranges is less than 10%. 1 tab.

37112 (INIS-SU–82, pp. 14-18) **Radiometric analysis of probes of environmental objects.** Kajdanovskij, G.N. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Development of high-sensitive detection system for radiometric analysis of probes of environmental objects is substantiated. The detector is a system of three proportional ionization chambers with 90% argon and 10% methane or pure methane working fluid. The first chamber is for alpha detection, all energy beta and background radiation detection. The third chamber is only for the background radiation detection. The detection unit is within the lead shield. The signals are processed by a logic unit. 4 refs.; 1 fig.

37113 (INIS-SU–82, pp. 154-157) **Units for detecting surface contamination by alpha radionuclides.** Ershov, E.B.; Ivanov, Yu.A.; Yakovlev, V.A. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Two variants of units for detecting surface contamination by alpha radionuclides are developed. In both variants the detecting parts include a detector in the form of zinc sulphide deposited on acrylic plastic, photomultiplier and high-voltage divider with a pulse shaper. All detector elements are enclosed in cylindrical metallic sleeve. The minimum surface contamination by alpha radionuclides is 0.06 particles/cm^{2}xmin, the measurement error being 20%, the measurement time-1 h. The detection unit mass is 0.9 kg.

37114 (ISN–88-03) **Thermal neutron detection with a lithium-6 loaded liquid scintillator.** Ait-Boubker, S.; Avenier, M.; Kerret, H. de; Lefievre, B.; Cousinou, M.C.; Declais, Y.; Aleksan, R.; Bouchez, J.; Besson, P.; Borel, H. and others. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. 1988. 20p. Order Number DE89789232/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Light yield, light transmission and pulse shape discrimination properties of NE320, a liquid scintillator based on pseudocumene and loaded with 0.15% of lithium-6 have been measured. Excellent pulse shape discrimination performances were obtained with a 100cm^3 cell, while its large transmission length permits its use in large volume detector.

37115 (JINR-R–15-88-479) **Ionization chamber-detecting setup of Vasilisa installation for the study of characteristics of total fusion reaction product decay.** Szaro, S.; Zejnalov, Sh.S.; Mikhajlov, K.V.; Popeko, G.S.; Ter-Akopyan, G.M. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions. 1988. 10p. (In Russian). Order Number DE89620296/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Operation of a double ionization chamber of a detecting setup of electrostatic separator of total fusion reaction products Vasilisa installation is described. It is shown that such ionization chamber permits to study α-decay and spontaneous fission of nuclei with half-life more than 40 ms. Efficiency of registration of nuclear α-decay is near 45%, efficiency of registration of spontaneous fission nuclei - about 90%. Cross section of $^{232}Th(^{31}P,5n)\ ^{258}105$ reaction was estimated to be equal to $\sigma \leq 5x10^{-34}cm^2$. Velocities of actinium ion drift in 90% Ar + 10% CH_4 gaseous mixture for different voltages of electrostatic field and 250 Torr pressure have been measured. The possibilities of improvement of the chamber for study of decay characteristics of nuclei with shorter lifetimes are discussed. 8 refs.; 4 figs.; 2 tabs.

37116 (LYCEN–88-43) **AMPHORA detector.** Drain, D.; Billerey, R.; Chambon, B.; Cheynis, B.; Guyon, L.; Pastor, C.; Giorni, A.; Alarja, J.; Barbier, G.; Hilscher, D. and others; AMPHORA Collaboration. Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire. 1988. 27p. Order Number DE89789260/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A 4π-multidetector consisting of 140 CsI(Tl) detectors has been designed and built to be used for detecting and identifying either charged-particles (with a low energy threshold of about 0.4 MeV/nucleon) and neutrons or light heavy-ions ad light charged-particles, in the range of energies available at S.A.R.A. (from 10 to 40 MeV/nucleon). The choice of the scintillator material is discussed and a description of the mechanical and electronic design is given. First experimental results obtained with this device are presented.

37117 (MPI-PAE/Exp.El.–197) **Development of new type of silicon detector with internal amplification.** Schuster, K.F. Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Werner-Heisenberg-Inst. fuer Physik; Muenchen Univ. (Germany, F.R.). Fakultaet fuer Physik. Nov 1988. 66p. (In German). Order Number DE89788401/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

The first test version of a new type of silicon detector made of extremely pure material was designed and manufactured. Numerical

simulation provided great assistance in selecting the process parameters. The principle of operation aimed at of a radiation deflector consisting of an MOS transistor with more than fully depleted base area was confirmed. The energy resolution of the detectors was determined at 300^{0}K and 6 keV (Mn K_α) to be 250 eV half width and is therefore considerably better than the conventional uncooled detectors. The detector principle permits the realisation of a two-dimensional detector matrix which can be addressed, with non-destructive triggering. With a measured signal/noise ratio of the individual detectors of better than 400 for minimum ionised particles, new types of fast triggering processes can be achieved in high energy physics with good local resolution ($\simeq$ 50 μm).

37118 (OEFZS-A–1350) **Automatic programmable air sampling stations. Instruction manual.** Roetzer, H. Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H. (Austria). Dec 1988. 8p. (In German). (IA–170/88). Available from the Austrian Research Centre Seibersdorf, A-2444 Seibersdorf (Austria).

Limited Distribution.

Programmable battery powered sampling stations were developed for the automatic collection of air samples at several locations of an inspected area. Eight air samples with a volume of about 5l can be collected sequentially with each sampling device. Time and duration of sampling can be chosen by initially programming the instruments. The manual gives the operating instructions, a list of the commands for programming the samplers and a short technical description of the instruments.

37119 (SLAC-PUB–4942) **Silicon PIN diode hybrid arrays for charged particle detection: Building blocks for vertex detectors at the SSC.** Kramer, G.; Gaalema, S.; Shapiro, S.L.; Dunwoodie, W.M.; Arens, J.F.; Jernigan, J.G. Stanford Linear Accelerator Center, Menlo Park, CA (USA). May 1989. 13p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-890270–20: International industrial symposium on the super collider, New Orleans, Louisiana, USA, 8-10 Feb 1989). Order Number DE89014590/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Two-dimensional arrays of solid state detectors have long been used in visible and infrared systems. Hybrid arrays with separately optimized detector and readout substrates have been extensively developed for infrared sensors. The characteristics and use of these infrared readout chips with silicon PIN diode arrays produced by MICRON SEMICONDUCTOR for detecting high-energy particles are reported. Some of these arrays have been produced in formats as large as 512 x 512 pixels; others have been radiation hardened to total dose levels beyond 1 Mrad. Data generation rates of 380 megasamples/second have been achieved. Analog and digital signal transmission and processing techniques have also been developed to accept and reduce these high data rates. 9 refs., 15 figs., 2 tabs.

37120 (UCRL–53861-Vol.3) **Program listings for GRPANL: A suite of computer programs for analyzing complex Ge and alpha-particle detector spectra: Volume 3.** Gunnink, R.; Ruhter, W.D.; Niday, J.B. Lawrence Livermore National Lab., CA (USA). 14 Mar 1989. 201p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE89014599/JAW. Available from NTIS, PC A09/MF A01 - OSTI; GPO Dep.

We use a suite of programs to analyze and interpret regions germanium and alpha-particle pulse-height spectra. GRPANL (GRouP ANaLysis) is the main peak-fitting program in this suite. Several other programs are used in support of or in conjunction with GRPANL. Some of these programs define parameters used in the analysis process. Determining these parameters is part of the calibration procedure for gamma-ray spectrometry system. This volume contains program listings for GRPANL.

37121 (Y/DW–783/R1) **Nonfilm radiography at the Oak Ridge Y-12 Plant.** Marshall, B.B.; Bell, Z.W.; Sworski, T.J. Oak Ridge National Lab., TN (USA). 17 Mar 1989. 19p. Sponsored by DOE Defense Programs. DOE Contract AC05-84OR21400. Order Number DE89014523/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Nonfilm, real-time radiography is being developed in a form applicable to U-6-Nb wt % alloy parts. A development facility is in operation for use in prototyping the equipment and methods to be used, and equipment for the production facility has been procured and is being installed. The production facility is scheduled to be transferred to production in FY 1990. Fully automated data acquisition and analysis methods have been developed and demonstrated on the development system. The software has been translated onto the production computer system and individually tested. A statistical comparison of nonfilm radiography, using the development facility, was completed in FY 1986. Results of this study indicate that the nonfilm method exhibits superior precision and accuracy but slightly poorer resolution than the normal film radiography. The nonfilm system also yielded a small number of "false alarms" apparently associated with the camera system. The size of the "false alarms" were less than the resolution limits of the system. A second statistical comparison of nonfilm radiography with conventional film radiography using actual production parts and the production facility is scheduled for FY 1990. 1 ref., 10 figs.

37122 Erratum to "hadron showers in a low-density fine-grained flash chamber calorimeter". Womersley, W.J. (Florida Univ., Gainesville (USA)); Walker, J.K.; Bogert, D.; Stutte, L.; Bofill, J.; Friedman, J.I.; Fuess, S.; Goodman, M.C.; Kendall, H.W.; Kistiakowsky, V. *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment (Netherlands),* 278(2): 447-451 (1 Jun 1989).

Our recent paper (Nucl. Instrum. Methods A267(1988) p. 49-68) described an analysis of the energy deposition in hadronic showers at six incident particle energies from 33.8 to 415.4 GeV using the low-density fine-grained flash chamber calorimeter of the Lab C neutrino detector at Fermilab. More recent work on the subject has led us to revise some of the results presented for energies above 200 GeV. We present here revised results for the longitudinal and transverse energy deposition, and new coefficients for the parametrization of these curves. (orig./HSI).

37123 Superconducting detector for minimum ionizing particles. Gabutti, A. (Argonne National Lab., IL (USA)); Wagner, R.G.; Gray, K.E.; Kampwirth, R.T.; Ono, R.H. *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment (Netherlands),* 278(2): 425-430 (1 Jun 1989). DOE Contract W-31-109-ENG-38.

Although the detection of α-particles by thin superconducting films has been demonstrated previously, detection of the significantly smaller energy deposited by minimum ionizing particles (mips) requires independent verification. In this paper, experiments using $\simeq$ 6 keV X-rays, which deposit energies comparable to mips, are used to show that the switching probability is smaller than predicted by the simplest energy balance model. As a result, the simplifying assumptions of this model are in question, and it is demonstrated that practical detectors of mips will greatly benefit from, and most probably require, superconducting transition temperatures which are close to a low operating temperature (e.g., 4.2 K). In addition, an existing thermal propagation model is shown to adequately describe the behavior of the normal region after switching.

37124 Sources of compensation in hadronic calorimeters. Goodman, M.S. (Oak Ridge National Lab., TN (USA)); Gabriel, T.A.; Di Ciaccio, A.; Wilson, R. *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment (Netherlands),* 278(2): 441-446 (1 Jun 1989). DOE Contract AC05-84OR21400;AC02-76ER03064.

Monte Carlo simulations are presented using the CALOR code system to study the design of a large hybrid hadron calorimeter system employing a warm liquid active medium (tetramethylsilane, $Si(CH_3)_4$) and uranium plates in addition to a conventional Fe/plastic system. In the system described here, the uranium provides partial compensation by suppressing the electromagnetic cascade produced by incident electrons due to sampling inefficiencies. The results of the simulations also indicate that significant compensation is achieved (given small enough saturation) due to low energy recoil protons produced in collisions with low energy (1-20 MeV) cascade and fission neutrons in the active medium. Both compensation mechanisms are important to help balance the response of a calorimeter to incident electrons and hadrons, that is, to achieve a ratio of pulse heights (e/h$\simeq$1) which will lead to the best energy resolution.

37125 Residual gas beam profile monitor. Krider, J. (Fermi National Accelerator Lab., Batavia, IL (USA)). *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment (Netherlands),* 278(3): 660-663 (15 Jun 1989).

The design and performance of a beam profile monitor which presents no material to the beam is described. The detector, which has a 75 mm active width, operates from residual gas in the beam vacuum system. It provides 1 mm rms spatial resolution and 1 ms time resolution in a 1 μA beam at 10^{-7} Torr. Using a microprocessor based scanning ADC, a sequence of ten profiles can be acquired in as little as 100 ms. The monitor could be applied in other stored or extracted beams where the amount of material seen by the beam must be minimized.

37126 Retractable carbon fibre targets for measuring beam profiles at the SLC collision point. Bowden, G. (Stanford Linear Accelerator Center, CA (USA)); Burke, D.; Field, C.; Koska, W. *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment (Netherlands),* 278(3): 664-669 (15 Jun 1989). DOE Contract AC03-76SF00515;AC02-76ER01112.

Retractable targets of carbon fibres with nominal diameters of 30, 7 and 4.5 μm have been in use at the collision point of the SLC (the SLAC Linear Collider). The target mechanism is compatible with the Mark II detector now in place at the collision point. Beam profiles are measured in horizontal and vertical axes by using magnetic dipoles to scan the beams across the fibres. Two signal detection mechanisms are available. Electron emission from the fibres is measured with the help of charge-sensitive amplifiers. Bremsstrahlung from the fibres is detected by downstream counters. Examples of measurements are given, and limits on the use of the techniques are discussed.

37127 Inclusion of correlations in the empirical selection of intranuclear cascade nucleons from high energy hadron-nucleus collisions. Alsmiller, F.S. (Oak Ridge National Lab., TN (USA)); Alsmiller, R.G. Jr. *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment (Netherlands),* 278(3): 713-721 (15 Jun 1989). DOE Contract AC05-84OR21400.

The very high energy (5 GeV to 20 TeV) hadron-nucleus differential particle production model found in the Monte Carlo transport code FLUKA87 has been adapted for inclusion in the transport code HETC88. The empirical selection of intranuclear cascade nucleons has been modified to provide simple correlations with the randomly selected number of hadron-nucleon collisions. A standard method of calculating the excitation energy of the compound nucleus preceding an added evaporation step by assuming the particles are produced in a one-dimensional nuclear well is applied. This method, coupled with the above correlations, leads to improved correlations of the excitation energy with the A and Z of the compound nucleus, and then to greatly improved distributions of the residual nuclei following evaporation. The frequency distribution of low energy ($\beta<0.7$) charged particles show good agreement with experiment for 200 GeV protons incident on emulsions. Average multiplicities of shower and grey particles after evaporation for protons and pions incident on several elements are also compared with experiment.

4402 Radiation Effects On Instrument Components, Instruments, Or Electronic Systems

37128 (AERE-R–13399) **Mechanical degradation of polymer coated glass optical fibres under γ irradiation.** Norris, J.O.W.; Tribble, M.J. UKAEA Harwell Lab. (UK). Materials Development Div. Feb 1989. 18p. Available from H.M. Stationery Office, London, price Pound 8.00.

The structural integrity of an optical fibre is a prerequisite for its successful operation, and yet very little is known on how their mechanical properties are degraded by radiation. For some potential uses within the nuclear industry the total dose received by the optical fibre will exceed 10 kGy, and it is known that this does is sufficient to cause fracture of some types of optical fibre. This report details results from an experimental investigation into the tensile strength of polymer coated optical fibres when exposed to γ-rays. Six types of fibre, having different polymer coatings, were irradiated at 28 kGy/day until either they became too fragile or brittle to test, or they had received 3-5 MGy. A silicone + ETFE (ethylene-tetrafluoroethylene polymer) coated fibre showed a 60% reduction in its tensile strain at fracture (from 5.2% to 2.1%) after 0.1 MGy. A silicone + nylon coated fibre fared little better, with the nylon becoming very brittle after 0.5 MGy. In contrast, acrylate or silicone + acrylate coated fibres degraded much less rapidly, showing a >2% strain at failure after 2.9 MGy. The coating that degraded least was a new, experimental, polyimide polymer, whose mean strain at failure was 2.9% after 5.1 MGy. The increased lifetime conferred by using an acrylate (+ silicone) or polyimide coated fibre is sufficient to make it practical to use these optical fibres in environments where the 0.1 MGy limit of the silicone + ETFE coated fibre had previously made fibres an unattractive option. The report ends with a discussion on the mechanisms and factors that affect the rate of mechanical degradation. It is postulated that the poor performance of the ETFE coated fibre results from chemical attack of the glass surface by fluorine containing gaseous species, formed from radiolysis of the ETFE.

37129 (RAE-TM-Space–365) **Particle transport simulation for spaceborne, NaI gamma-ray spectrometers.** Dyer, C.S.; Truscott, P.R.; Sims, A.J.; Comber, C.; Hammond, N.D.A. Royal Aircraft Establishment, Farnborough (UK). Nov 1988. 10p. Order Number DE89620339/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Radioactivity induced in detectors by protons and secondary neutrons limits the sensitivity of spaceborne gamma-ray spectrometers. Three dimensional Monte Carlo transport codes have been employed to simulate particle transport of cosmic rays and inner-belt protons in various representations of the Gamma Ray Observatory Spacecraft and the Oriented Scintillation Spectrometer Experiment. Results are used to accurately quantify the contributions to the radioactive background, assess shielding options and examine the effect of detector and space-craft orientation in anisotropic trapped proton fluxes.

37130 (SAND–89-0334C) **A radiation-hardened 16/32-bit microprocessor.** Hass, K.J.; Treece, R.K.; Giddings, A.E. Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890723–5: 26. annual conference on nuclear and space radiation effects, Marco Island, Florida, USA, 24-28 Jul 1989). Order Number DE89008111/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A radiation-hardened 16/32-bit microprocessor has been fabricated and tested. Our initial evaluation has demonstrated that it is functional after a total gamma dose of 5Mrad(Si) and is immune to SEU from Krypton ions. 3 refs., 2 figs.

37131 (UCID–21731) **A probabilistic method for estimating system susceptibility to HPM.** Mensing, R.W. Lawrence Livermore National Lab., CA (USA). 18 May 1989. 13p. Sponsored by Department of Defense. DOE Contract W-7405-ENG-48. Order Number DE89014307/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Interruption of the operation of electronic systems by HPM is a stochastic process. Thus, a realistic estimate of system susceptibility to HPM is best expressed in terms of the probability the HPM have an effect on the system (probability of effect). To estimate susceptibility of complex electronic systems by extensive testing is not practical. Thus, it is necessary to consider alternative approaches. One approach is to combine information from extensive low level testing and computer modeling with limited high level field test data. A method for estimating system susceptibility based on a pretest analysis of low level test and computer model data combined with a post test analysis after high level testing is described in this paper. 4 figs.

37132 (CANMET–8801) **"Slip effects" in concentrated emulsions.** Pal, R.; Rhodes, E.; Mansour, N.A. Canada Centre for Mineral and Energy Technology, Ottawa, ON (Canada). 1988. 34p. (MICROLOG–88-06047). Available from Canada Centre for Mineral and Energy Technology, Technical Information Division, 555 Booth St., Rm. 342, Ottawa, ON, Canada K1A 0G1; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

In this study, rheological data obtained for various concentrated oil-in-water and water-in-oil emulsions from viscometers of different design and geometry have been analyzed and compared. The three types of viscometers used were: Couette viscometer (coaxial cylinder type), Weissenberg rheogoniometer (cone-and-plate), and Brookfield viscometer (rotating bob in an infinite fluid). In the case of oil-in-water emulsions, the flow curves obtained with the cone-and-plate viscometer are in close agreement with those given by the coaxial cylinder viscometer only when the oil concentrations are below 70%; for concentrations greater than 70%, the flow curves obtained from the two instruments are appreciably different. In the case of water-in-oil emulsions, the flow curves obtained from different instruments are in agreement only when water phase concentrations are below 60%; for water concentrations greater than 60%, the flow curves obtained are significantly different. The variation in the flow curves for the same concentration emulsions has been attributed to the presence of the "slip effect" in the cone-and-plate viscometer. This effect has been observed in capillaries and leads to the formation of a boundary layer of the continous phase. A mathematical model is presented that reconciles the various methods of measurement. 22 refs., 10 figs., 1 tab.

37133 (CONF-890619–3) **Multi-energy neutron detector for counting thermal neutrons, high-energy neutrons, and gamma photons separately.** Chiles, M.M.; McElhaney, S.A. Oak Ridge National Lab., TN (USA). 1989. 7p. Sponsored by Department of Defense. DOE Contract AC05-84OR21400. From 34. annual meeting of the Health Physics Society; Albuquerque, New Mexico, USA; 25-29 Jun 1989. Order Number DE89014761/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The need for an improved, compact, wide-energy neutron detector for neutron monitoring and surveillance in nuclear facilities and weapons storage, where a possibility of fission excursion exists, led to development of a single detector that is sensitive to thermal neutrons, high-energy neutrons, and gamma radiation. Previously, separate detectors have been required to count these three different radiations separately. This development is a great advantage when experimental space is limited. 4 figs.

37134 (DOE/ER/13576–3) **Non-linear optical interactions involving the real Gaussian field: Annual technical progress report, August 1, 1986–July 31, 1989.** Elliott, D.S. Purdue Univ., Lafayette, IN (USA). School of Electrical Engineering. Jul 1989. 7p. Sponsored by DOE Energy Research. DOE Contract FG02-86ER13576. Order Number DE89014165/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In the past year we have developed a technique for creating the real Gaussian field, and in a related effort, have calculated the power spectrum of the intensity fluctuations of the light transmitted by a Fabry-Perot interferometer when a phase diffusion field is incident upon it. In this annual report we discuss progress made in these two efforts. 3 figs.

37135 (EGG–10617-1033) **In search of more output: Two strain gage bridge circuits revisited.** Noyes, R.P.; Kalinowski, J. EG and G Energy Measurements, Inc., Las Vegas, NV (USA). 1989. 7p. Sponsored by DOE Defense Programs. DOE Contract AC08-88NV10617. (CONF-8906133–2: 15. transducer workshop, Cocoa Beach, FL, USA, 20-22 Jun 1989). Order Number DE89014039/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The emplacement of large loads via drill pipe is common in Nevada. EG and G Energy Measurements, Inc. is involved in instrumentation. The loading of the drill pipe is of interest and is often measured with strain gages. Sometimes the amount of loading is small relative to the size of the pipe and only produces strain level on the order of 500 to 1000 microstrain. These circumstances have led to implementation of practical methods of measuring these strain levels. The original measurements were made utilizing piezoresistive strain gages with gage factors on the order of 55. Although having large outputs, these gages posed other problems. As a need for more reliable measurements arose, more stable gages were used. These gages have lower output, on the order of 2; therefore, techniques were investigated to gain more output. These techniques used proven circuits and were investigated for the best practical use under our particular circumstances and environments. The results of these investigations will be reported, and conclusions given, in the summary of this presentation. 7 refs.

37136 (INIS-SU–76, pp. 13-15) **Effect of diffusion on flow-rate time-of-flight measurements.** Kebadze, B.V.; Tipikin, V.N.; Komissarov, Yu.O. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1988. (In Russian). In *Physics and technology of atomic reactors. Scientific-technical collection.* Order Number DE89012164/JAW. Available from NTIS (US Sales Only), PC A06/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 1.

Results of analysis of a one-dimensional mathematical model, permitting to consider the diffusion effect on flow-rate measurements using the time-of-flight method, are presented. Diffusion parameters were evaluated on base of experimental data obtained in electromagnetic flowmeter tests with the eddy label of a flow. Deviation from true flow rate owing to diffusion is ~ 1% at averaged rate of 0.5 m/s. For nominal coolant rates (3-5 m/s) the diffusion effect is negligible. 4 refs.; 2 figs.

37137 (LA–11525-MS) **Significant improvement in IR surface-temperature measurements.** Briles, S.D.; Bennett, G.A.; Larkin, T.H.; Worcester, P. Los Alamos National Lab., NM (USA). Jun 1989. 26p. Sponsored by Department of Defense. DOE Contract W-7405-ENG-36. Order Number DE89014808/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Obtaining infrared (IR) surface-temperature measurements of miniature square targets on the order of 1.6 mm with a spatial resolution of 15 μm has recently become possible using the Barnes Engineering Computherm System, but the accuracy and precision of the measurements have been limited. The objective of this work is to provide a calibration procedure that will improve by a factor of 8 the accuracy and precision of the two-dimensional temperature measurement. The IR microscope detects energy emitted by the target and displays it as a radiance image. Heating the target to two known temperatures permits calculation of the target emissivity using the radiances at each pixel in the two-dimensional field. An error is induced in the emissivity calculation by substituting the thermal-well temperature for the known target surface temperature. At the same time, the radiance image is distorted by two functions that affect the measurement accuracy. The precision of the instrument is altered by a random noise field function. The noise functions were investigated to determine whether they were added to or multiplied by the radiance equation. A plot of image-radiance means shows the same trends as the added noise functions suggested by the prediction. Correction of the induced distortions improved the accuracy noticeably. Further improvement in the accuracy is accomplished by using a syringe thermocouple to measure the actual surface temperatures used for the emissivity calculations. Investigation of the random noise field shows that it is zero-mean and Gaussian in nature. We can therefore average images over time to improve the precision. 9 refs., 12 figs., 1 tab.

37138 (LA-UR–89-1951) **The Los Alamos Fourier-transform spectrometer: Applications to molecular spectroscopy.** Palmer, B.A.; McDowell, R.S. Los Alamos National Lab., NM (USA). 1989. 6p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890674–3: 7. international conference on Fourier transform spectroscopy, Fairfax, VA, USA, 19-23 Jun 1989). Order

Number DE89014258/JAW. Available from NTIS, PC A02/MF A01 - OSTI.

We outline design considerations and operating characteristics of the Los Alamos Fourier-transform spectrometer, a state-of-the-art instrument operating from 200 nm to 20 μm with a resolution of 0.0026 cm^{-1} and very high wave number and intensity accuracy. Recent work in molecular spectroscopy carried out with this instrument will be discussed, including N_2^+ spectra obtained in inductively-coupled plasmas; high-temperature spectra of diatomic molecules of astrophysical interest; high-resolution rovibrational fine structure; and Fourier-transform Raman spectroscopy of species in expansion-cooled gases. 8 refs., 5 figs., 4 tabs.

37139 (LA-UR-89-2148) **Detection of photon bursts from single 200 eV Mg ions: Progress in photon burst mass spectrometry.** Fairbank, W.M. Jr.; LaBelle, R.D.; Keller, R.A.; Chamberlin, E.P. Los Alamos National Lab., NM (USA). 1989. 4p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-890618-1: 9. international conference on laser spectroscopy, Bretton Woods, NH, USA, 18-23 Jun 1989). Order Number DE89014289/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Modern atom counting methods, based on advances in laser and accelerator technology, provide a valuable complement to traditional decay counting methods for radioisotope dating and tracer work. Tandem Accelerator Mass Spectrometry (TAMS) has already had a large impact on ^{14}C dating and is beginning to provide new opportunities with ^{10}Be and several other isotopes. We report here on progress in the development of a laser-based technique, Photon Burst Mass Spectrometry, which is potentially capable of analyzing many of the elements which are forbidden in TAMS because they do not form negative ions. We are especially interested in the noble gases, which have a variety of potential scientific and environmental applications.

37140 (MLM-3593(OP)) **The effect of ultra-high vacuum on thermal ionization processes.** Tackett, J.R.; Ellefson, R.E.; Wiedenheft, C.J. EG and G Mound Applied Technologies, Miamisburg, OH (USA). 1989. 2p. Sponsored by DOE Defense Programs. DOE Contract AC04-88DP43495. (CONF-8905166-5: American Society for Mass Spectroscopy annual symposium, Miami Beach, Florida, USA, 22-26 May 1989). Order Number DE89014736/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We have observed an annual delay in Pu and U ion production during a normal heating pattern when our triple-filament thermal-ionization source operates at a pressure less than 3×10^{-8} Torr. The data for this effect was obtained on a NBS-type 12"-90° sector mass spectrometer equipped with a 330 L/sec turbomolecular pump with a LN_2 trap for the source and a glass LN_2 cold finger directly above the ion source. The analyzer is ion pumped. When changing samples, the source is vented with dry N_2 (trapped with LN_2) to prevent accumulation of water vapor in the source. Additionally, the filament pins are vacuum baked as a final step in their cleanup process. This pumping system and the efforts to restrict water vapor from the source region reduced the source ion base pressure from 2×10^{-7} to 3×10^{-9} Torr after 8 months of the practice and the pressure during sample analysis was reduced to about 1×10^{-8} Torr. Pumpdown time was dramatically reduced reaching 5×10^{-8} Torr in 20 min of pumping after a sample change. As we approached these low pressures, we began to experience the delay effect and finally the enhanced ionization phenomena. 3 figs.

37141 (PNL-SA-16622) **Capillary zone electrophoresis-mass spectrometry of peptides and proteins.** Loo, J.A.; Udseth, H.R.; Smith, R.D. Pacific Northwest Lab., Richland, WA (USA). May 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC06-76RL01830. (CONF-8905166-3: American Society for Mass Spectroscopy annual symposium, Miami Beach, FL, USA, 22-26 May 1989). Order Number DE89014466/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Capillary zone electrophoresis (CZE) is attracting extensive attention as a fast, high resolution analytical and micro-preparative separations technique for systems of biological interest. In zone electrophoresis, a column is filled with a single electrolyte having a specific conductivity. The mixture of substances to be separated is applied as a narrow band to the head of a buffer filled column in a band whose width is much less than the length of the column and at a concentration too low to affect the buffer conductivity. An electric field is then applied across the length of the column and the individual substances migrate and separate according to their net electrophoretic velocities. Zone electrophoresis carried out in small diameter (<100 μm) fused silica capillaries is a relatively new approach to the high resolution separation of aqueous samples. Very small volume samples (picoliter range) with separation efficiencies on the order of 10^6 theoretical plates for amino acids have been achieved. The method can be further enhanced by the dynamic combination of detection sensitivity and selectivity offered by mass spectrometry (MS). The on-line marriage of mass spectrometry to CZE is accomplished by an atmospheric pressure electrospray ionization source interface. Our research efforts have demonstrated that proteins with MW's greater than 100 kDa can be analyzed using a conventional quadrupole mass spectrometer with an upper m/z limit of only 1700. 6 refs.

37142 (PNL-SA-16629) **The on-line combination of capillary isotachophoresis with mass spectrometry.** Udseth, H.R.; Fields, S.M.; Loo, J.A.; Smith, R.D. Pacific Northwest Lab., Richland, WA (USA). May 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC06-76RL01830. (CONF-8905166-4: American Society for Mass Spectroscopy annual symposium, Miami Beach, FL, USA, 22-26 May 1989). Order Number DE89014275/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Capillary zone electrophoresis (CZE) has been demonstrated to have tremendous potential for high-resolution separations of ionic compounds of biological interest. The small capillary diameter (<100 μm) used in CZE and the need to keep the ionic strength of the sample two orders of magnitude less than that of the buffer place rather stringent limits on the amount of sample that can be injected. Isotachophoresis in a capillary format (CITP) is a complementary scheme that overcomes these limitations (1). The CITP/MS combination has several attractive features. First, there are no fundamental limits on the sample size that can be introduced. Second, CITP can result in the concentration of samples that are injected in dilute solutions. Third, once the separation is developed the sample elutes continuously, allowing efficient use of detector time. Fourth, the ideal peak shape in CITP is sharp sided and flat topped. This is an ideal peak shape for mass spectrometric detection. The scan speed of most mass spectrometers is not challenged and MS/MS analysis is facilitated (2,3). Electrospray ionization (ESI) has been shown to be an effective means of ionizing labile biopolymers from solution. In this work we present the results of an examination of two systems using CITP coupled to mass spectrometry by an ESI interface of our design (2).

37143 (PNL-SA-16630) **Speculation on the mechanism(s) of electrospray ionization.** Smith, R.D.; Udseth, H.R.; Loo, J.A.; Edmonds, C.G.; Barinaga, C.J. Pacific Northwest Lab., Richland, WA (USA). May 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC06-76RL01830. (CONF-8905166-2: American Society for Mass Spectroscopy annual symposium, Miami Beach, FL, USA, 22-26 May 1989). Order Number DE89014464/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Proteins can be effectively addressed by electrospray ionization (ESI), yielding a distribution of charge states. Reasonable mass spectra can be obtained with picomole quantities of protein, and the molecular weight of unknown substances can be accurately calculated based upon any two peaks (assuming one knows that the peaks are related). Given typical distributions the calculation is straightforward and the accuracy of the determination (generally 0.005 to 0.05% depending upon sample purity and S/N) is enhanced by use of several peaks. Simple mixtures may be readily addressed and the MW of each component determined.

37144 (SAND-88-3153) **The effects of snow on landmarks in K_u band SAR images.** Murray, M. Sandia National Labs., Albuquerque, NM (USA). Apr 1989. 117p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE89014578/JAW. Available from NTIS, PC A07/MF A01 - OSTI; GPO Dep.

This report documents research into the effects of snow on candidate landmarks for the TFS radar. It includes a discussion of a simple snow model, relevant backscatter data from previous ground

based collections, predictions of the effects of snow coverage based on this data, a discussion of the snow data collection with the TFS radar, and an analysis of the results of that collection. All SAR images are for a K_u band radar, with HH polarization, and a 30° depression angle. The images have three meter resolution and a one kilometer swath. SAR images were collected of both rural and urban landmarks. 5 refs., 10 figs., 19 tabs.

37145 (SAND–89-0133C) **Droplet sizing calibration of the Phase Doppler Particle Analyzer.** O'Hern, T.J.; Rader, D.J.; Ceman, D.L. Sandia National Labs., Albuquerque, NM (USA). 1989. 10p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890737–2: ASME fluids engineering meeting, San Diego, California, USA, 9-12 Jul 1989). Order Number DE89008225/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The Phase Doppler Particle Analyzer (PDPA) is an LDV-based instrument for simultaneous measurement of single particle size and velocity. A PDPA calibration was performed using well-characterized liquid droplets in the 4 to 80 μm diameter range. Two test liquids were used: oleic acid and kerosene. A standard PDPA instrument and a fiber-optic probe PDPA system were tested. The standard instrument measurements agreed with expected droplet diameters to within the droplet generation accuracy for droplets above 15 μm diameter, and had a measurement accuracy of about 2 μm for smaller droplets. The fiber-optic probe system exhibited similar behavior, although the 2 μm sizing uncertainty extended to droplets as large as 25 μm. The measurement uncertainties in the small diameter ranges are in qualitative agreement with the light-scattering computations of Al-Chalabi et al. (1988) and Saffman et al. (1984). 7 refs., 4 figs.

37146 (SAND–89-1192C) **A fully automated, single-connection tester for T/R modules.** Sloan, G.R.; Simons, J.M. Sandia National Labs., Albuquerque, NM (USA). 1989. 10p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8906132–1: Automatic RF Technologies Group meeting, Long Beach, CA, USA, 15 Jun 1989). Order Number DE89013155/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

An inherent aspect of active array radars is the use of large numbers – typically hundreds – of transmit/receive (T/R) modules. The implementation of this technology at Sandia has created new challenges for the tester designer. Foremost among these challenges is the need to design T/R module testers which can accommodate such large numbers of devices-under-test (DUTs). This task is complicated by the fact that state-of-the-art T/R modules are extremely sophisticated and require a broad spectrum of tests for adequate evaluation. The Sandia T/R module operates in Ku band and consists of a transmitter, receiver, programmable phase shifter, programmable attenuator, modulator, switched limiter, and gate-array controller. The programmable phase shifter is common to both the transmitter and receiver, but the attenuator is unique to the receiver. The instruments required for the tests include a network analyzer, a spectrum analyzer, a noise figure meter, a peak-power meter, and an automated tuner system. The key to a successful tester is in integrating all of the above instruments such that the desired measurements can all be performed from a single, two-port, tester-to-DUT connection. The natural consequence of such a design is that some measurements will have to be de-embedded from the integrated test setup. This paper addresses both the tester's instrument integration and the resulting de-embedding concerns. 2 figs.

37147 (UCRL–100969) **A review of the development of a program to generate inspection programs for the OGP [Optical Gaging Products] optical CMM [Coordinate Measuring Machine].** Frank, R.N. Lawrence Livermore National Lab., CA (USA). 4 May 1989. 8p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8905150–1: NWW-CMM user group, Kansas City, MO, USA, 9-11 May 1989). Order Number DE89013774/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Due to software limitations of the Optical Gaging Products VIDI-COMP 200 Program, ANSI Y-14.5 profile analysis of mechanical parts being inspected on the OGP optical comparator is accomplished through direct actual/nominal comparison of discrete data points. On-line programming of complicated surfaces adequate to achieve statistically significant data density is extremely time consuming. The proprietary software requires over 45 keystrokes per data point to create a measurement program. Data quality is also circumspect when 12 decimal digits need to be calculated, read, and keyed in per x-y coordinate. In order to improve the efficiency of this process, I have written a program in Hewlett-Packard Basic 2.1 which generates a disk file which can be read as an OGP Part Program. The program prompts for input of basic information regarding the shape, size, and location of either an ellipse or parabola, and a measurement program is generated. This paper presents a view of the techniques used in working with the 32,000 lines of undocumented OGP code and the binary data files produced by the on-line programming functions to create a working program which can generate part program files in minutes, which would otherwise require days of effort.

37148 (CONF-890769–2) **Explosives detection with an ion trap mass spectrometer.** McLuckey, S.A.; Glish, G.L.; Grant, B.C. Oak Ridge National Lab., TN (USA). 1989. 18p. Sponsored by DOE Defense Programs. DOE Contract AC05-84OR21400. From 3. international symposium on analysis and detection of explosives; Mannheim, Germany, F.R.; 10-13 Jul 1989. Order Number DE89012510/JAW. Available from NTIS, PC A03/MF A01 - OSTI.

The combination of atmospheric sampling glow discharge ionization with mass spectrometry/mass spectrometry provides a powerful approach to the detection of trace quantities of explosives in air. The ion source is operated in such a way as to make it relatively immune to ionization interferences. False alarms are minimized by mass spectrometry/mass spectrometry, which has orders of magnitude greater informing power than other analyzers used in explosives detection. The ion trap mass spectrometer is a promising new device for mass spectrometry/mass spectrometry. A glow discharge ion source has been coupled to an ion trap. Even in its early stage of development it has proved superior to devices that employ more conventional approaches to mass spectrometry/mass spectrometry. Improvements in ion injection into the ion trap, however, are desirable (and are likely). 11 refs., 8 figs.

37149 (SAND–89-0677C) **Techniques for the detection of explosives.** Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890769–3: 3. international symposium on analysis and detection of explosives, Mannheim, Germany, F.R., 10-13 Jul 1989). Order Number DE89012570/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Novel methods/techniques for the detection of explosives are briefly described. The methods include vapor detection, preconcentrators, chemiluminescence detectors and microwave detectors. (CBS)

37150 (DOE/EH/79050–T1) **Hazards of explosives dusts.** Bureau of Mines, Pittsburgh, PA (USA). Pittsburgh Research Center. 1989. 109p. Sponsored by DOE Environment Health & Safety. DOE Contract AI01-88EH79050. Order Number DE89014554/JAW. Available from NTIS, PC A06/MF A01 - OSTI; GPO Dep.

The Bureau of Mines has investigated the hazards of military explosives dispersed as dust clouds in a 20-L test chamber. For purposes of personnel safety, the spark ignitability of the explosives in the form of unconfined dust layers was also studied. The 20-L data show that most of the explosives dusts were capable of sustaining explosions as dust clouds dispersed in air and some dusts were even capable of sustaining explosions when dispersed in nitrogen. The finest sizes of explosives dusts were less reactive than the larger sizes; this is opposite to the particle size effect observed previously for the pure fuel dusts. The data for the explosives dusts were compared to those for pure fuel dusts. 27 refs., 47 figs.

37151 (LA–11294-MS) **Numerical simulation of the simultaneous detonation of two identical, fully contained explosions.** Trent, B.C. Los Alamos National Lab., NM (USA). Jul 1989. 78p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. Order Number DE89014844/JAW. Available from NTIS, PC A05/MF A01 - OSTI; GPO Dep.

It has been proposed that a multiburst environment may have certain advantages over a single burst for driving a stress wave with given characteristics to a particular depth. This report describes a numerical study performed with the SHALE code to look at the simultaneous detonation of two fully contained, identical 500-kt bursts. Calculations are presented that show the distance a given peak stress is propagated in a low-porosity, saturated limestone and how this distance is enhanced if the stress waves from two bursts, with known separation, are allowed to interact. 5 refs., 49 figs.

37152 (MLM–3590) **Investigation of ambient and high temperature aging of PETN [pentaerythritol tetranitrate] by laser induced fluorescence and ultraviolet absorption spectroscopies.** Dosser, L.R.; Seliskar, C.J. EG and G Mound Applied Technologies, Miamisburg, OH (USA). 23 Jun 1989. 19p. Sponsored by DOE Defense Programs. DOE Contract AC04-88DP43495. Order Number DE89013740/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The chemical aging of pentaerythritol tetranitrate (PETN) has been and continues to be an important problem in producing and maintaining high energy compounds and components. The work done to date has identified several key concerns in evaluating the chemical and physical aging processes of PETN. These include the manner in which a particular type of PETN is prepared, the sample preparation procedure insofar as it can influence the adsorbed species on the solid PETN, and the methods of measurement and their influence on the quantitative determination on the gaseous decomposition products. In the work reported here, two noninvasive spectroscopic methods of measurement were chosen: laser induced fluorescence, which was used to monitor NO_2, and ultraviolet spectroscopy, which was used to monitor NO. A unique sample vessel design permitted both measurements to be made on the sample, and these two species could readily be measured in the presence of one another. Adsorbed NO_2, and its subsequent reaction to yield NO, was detected. Three types of PETN samples were aged at elevated temperatures, and varying amounts of NO and NO_2 were detected, depending on the sample and the method of preparation. The results indicate that an in situ experiment is necessary to further investigate PETN aging. 10 refs., 10 figs., 2 tabs.

37153 (UCRL–101058) **An architecture for real-time control and data acquisition at LLNL's high explosives application facility (HEAF).** Thompson, W.M.; O'Brien, D.W. Lawrence Livermore National Lab., CA (USA). May 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890545–4: 6. conference on real-time computer applications in nuclear, particle and plasma physics, Williamsburg, Virginia, USA, 15-18 May 1989). Order Number DE89013051/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

HEAF is a new experimental facility for high explosive physics at LLNL. Experimental areas and diagnostics are briefly presented. Diagnostics range from digitized waveforms, to rotating mirror cameras, laser holography and velocimetry. The real-time control and data acquisition developed in the HEAF project is discussed in detail. Of particular interest is a computer architecture for support of independent experimental areas. Distributed supervisory control, safety related and time critical control are discussed. Operator consoles are briefly described. Hardware configurations are reviewed; software technologies and applications are presented. 7 refs., 3 figs.

4502 Nuclear

37154 (AD-A–955407/2/XAB) **Some aspects of Starfish.** Lowen, R.W.; Sowle, D.H.; Hamlin, D.A. General Dynamics Corp., San Diego, CA (USA). Convair Div. 20 Jun 1968. 17p. Available from NTIS, PC A03/MF A01.

Previous conjecture that certain puzzling observations of electromagnetic effects in the StarFish burst area could be understood as resulting from the effects of charge exchange is supported by further arguments and calculations. The conditions for copious charge exchange are discussed and shown to obtain for StarFish. Estimates are given for the velocity distribution of the escaping fast neutrals, for the pre-ionization they produce, and for the location of their first re-ionization. DAC-code results for piston location, attenuation, and radio-brightness temperature are presented. The energy spectrum and the number density of photoelectrons in the region of the debris expansion is calculated, based on an x-ray spectrum calculated by Longmire. Various problem areas in understanding Star-Fish are discussed, including the field-line jet, the stability of the bubble, and the deposition of the energy carried by the charge-exchange neutrals.

37155 (AD-A–955408/0/XAB) **Study of coupling in Starfish.** Longmire, C. Los Alamos Nuclear Corp., NM (USA). 30 Oct 1969. 51p. (LANC-R–5). Available from NTIS, PC A04/MF A01.

Some data from Starfish are examined with the goal of trying to discover the type of coupling that was effective between moving and stationary ions. It appears that Larmor-radius coupling is required, although there are some discrepancies, connected with the ambient air density or ionization cross sections, to be resolved.

37156 (CEA-CONF–9706) **Neutrons and gamma transport in atmosphere by Tripoli-2 code. Energy deposit and electron current time function.** Vergnaud, T.; Nimal, J.C.; Ulpat, J.P.; Faucheux, G. CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France). 1988. 35p. (In French). (CONF-880906–: 7. international conference on radiation shielding, Bournemouth, UK, 12-16 Sep 1988). Order Number DE89776471/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The Tripoli-2 computer code has been adapted to calculate, in addition to energy deposit in matter by neutrons (Kerma) the energy deposit by gamma produced in neutronic impacts and the induced recoil electron current. The energy deposit conduces at air ionization, consequently at a conductibility. This knowledge added at that of electron current permit to resolve the Maxwell equations of electromagnetic field. The study is realized for an atmospheric explosion 100 meters high. The calculations of energy deposit and electron current have been conducted as far as 2.5km.

37157 (SAND–89-0666) **Communication techniques for safely transmitting and verifying unique signals.** Cooper, J.A. Sandia National Labs., Albuquerque, NM (USA). Mar 1989. 49p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE89013879/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A related function takes place in situations where an intermediate memory device may be used to store the unique signal information. In this case, "verification patterns" are communicated back to the source as status of the memory in which the unique signal is stored. If properly used, unique signals and verification patterns can support acceptable abnormal-environment nuclear detonation safety. If improperly used, there is danger of a false sense of complacency. In this report, the potential danger of misunderstanding the implications of abnormal environments is described. Unfortunately, a number of common normal-environment assumptions and analytical techniques are sometimes applied to abnormal environment situations. Several of these are shown to be misleading for assessing unique signal performance in abnormal environments. Misapplied approaches can encourage communication system design features that may seriously degrade nuclear detonation safety. 8 refs., 10 figs.

37158 (UCID–20622-89-1) **Chemistry and Materials Science research report: Weapons-Supporting Research and Departmental Institutional Research and Development: First half FY1989.** Lawrence Livermore National Lab., CA (USA). 1 Jun 1989. 102p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE89014303/JAW. Available from NTIS, PC A06/MF A01 - OSTI; GPO Dep.

The research reported here in summary form was conducted under the auspices of Weapons-Supporting Research (WSR) and Institutional Research and Development (IR and D). The period covered is the first half of FY89. Administratively, WSR is organized

into block-funded programs ("thrust areas") and a few smaller projects led by individual investigators. The results reported here are for work in progress; thus, they may be preliminary, fragmentary, or incomplete. Research on the following are briefly described: high-temperature superconductivity; tritium; interfaces, adhesion, and bonding; plutonium and actinides; high-explosives technology; fundamental mechanisms of metal processing; synchrotron-radiation-based materials science; enzyme mimics for methane conversion; structural characterization and modeling of organic aerogels; ultratrace analysis of explosive residues; site-specific chemistry using synchrotron radiation; electronic structure of systems with reduced symmetry; studies of thin molecular plasmas; and the structure-property link in subnanometer materials.

37159 (UCRL–21208) **Centrifuge tests on simulation of the "cookie cutter" mechanism of chimney collapse into underground openings: Final report.** Kutter, B.L.; Chang, Ging-Song. California Univ., Davis, CA (USA). Dept. of Civil Engineering. May 1989. 21p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE89014100/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The underground testing of nuclear devices causes the formation of large underground cavities which eventually may be filled by rubble and soil falling from the roof of the cavity. The zone of collapsing soil progresses upward toward the ground surface to form a "chimney." The mechanisms of chimney collapse are important to understand for two important reasons. (1) A devastating and sudden propagation of the collapse may result in the formation of a surface crater which may threaten personnel and equipment in the vicinity of the crater. (2) Different collapse patterns are known to occur in the field and some of these collapse patterns are known to be associated with leakage of radioactive wastes to the ground surface. A number of centrifuge tests were conducted by Kutter et al. (1988), to study the collapse of cavities in uniform dry sands. In these materials, the chimney collapse patterns were found to involve continuous, smoothly varying shear strain patterns in the chimney. The pattern of collapse in one of the tests is shown in figure 1. Figure 1a shows the surface crater that formed on the ground surface due to the collapse of a 6 inch diameter cavity buried 18// beneath the ground surface. This result was obtained by draining fluid out of a 6// rubber bag while the centrifuge was spinning at 11 g.

37160 (DFVLR-FB–89-06) **Investigation about the usefulness of Landsat 5 thematic mapper data for mapping forest disease.** Foerster, B. Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt e.V., Koeln (Germany, F.R.); Technische Univ. Berlin (Germany, F.R.). Fachbereich Landschaftsentwicklung. 1989. 200p. (In German). Order Number DE89788359/JAW. Available from NTIS (US Sales Only), PC A09/MF A01.

The usefulness of Landsat 5 thematic mapper data for mapping forest disease in spruce stands (Picea abies) in the northern part of the Harz mountains, Germany, is investigated. In order to take the different illumination in this mountainous area into account, six illumination classes calculated from a Digital Terrain Model were used. The result of a detailed signature analysis showed, that the pixel-wise difference of the channels TM4-TM5 is best suited for an estimation of the quota of highly damaged spruce trees. The digital classification based on this difference is compared with the result of an aerial photo interpretation of the disease. (orig.) With 45 figs., 38 tabs., 79 refs.

37161 (UCID–21634) **Backgrounder contribution No. 18: Climate scenarios for the first UC/DOE workshop.** Knox, J.B. Lawrence Livermore National Lab., CA (USA). May 1989. 38p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-48. Order Number DE89014302/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The purpose of this contribution is to provide a more detailed discussion of our workshop climate scenarios for the periods (1) 2000–2010 and (2) 2030–2070 summarized in the introduction. The description considers the rationale or method of preparation of each element in the climate scenarios, the associated references and source documents, and an estimate of the uncertainty associated with the elements of the scenarios. In addition, a description is included of the climate scenario presently being used in the State of California's Study of Global Warming, and supportive material in regard to the climate scenario used in the Australian assessment of global warming and its effects on that nation. The summary table of the two workshop climate scenarios is reproduced here in this chapter for ease of reference, with the scenario elements labelled alphabetically for discussion purposes. 95 refs., 5 figs.

37162 (AD-A–204737/1/XAB) **Indoor spatial monitoring of combustion-generated pollutants (TSP, CO, and BAP) by Indian cookstoves.** Menon, P. Hawaii Univ., Honolulu, HI (USA). Dept. of Meteorology. Jul 1988. 201p. (UHMET–88-01). Available from NTIS, PC A10/MF A01.

This dissertation focusses on indoor concentrations of pollutants (TSP, carbon monoxide and barium phosphide) emitted by Indian cookstoves. Experiments in a simulated village hut (SVH) determined size distribution of particulates from burning of fuelwood and cowdung, and investigated the effects of fuel, ventilation condition and sampling location on TSP, CO, and BaP concentrations; 84 to 99 % of the total particulate mass in wood and dung smoke had aerodynamic diameter less than 3.2 micro, which eliminated the need for particle-size discrimination sampling. These experiments finalized the field sampling protocol. The field survey included 291 households in three central and two south Indian villages. The kitchens had either thatched or tiled roofs with a variety of volumes and open spaces on the walls. Fixed monitoring was done at roof, medium, and low levels close to stove or chula (cemented to floor) and personal sampler on the cook-monitored air in her breathing zone.

37163 (BNL–42768) **Characterization of painted surfaces in the United States from the perspective of potential damage from acidic deposition.** Lipfert, F.W. Brookhaven National Lab., Upton, NY (USA). Mar 1989. 46p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH00016. Order Number DE89014264/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

Data on the types and applications of exterior paints used in the United States are reviewed from the perspective of potential damage by air pollution or acidic deposition. The data show that residential buildings are the most economically important subset of the painted structures in the US for painting costs. The trends for new construction suggest that this ranking is likely to continue in the future. Although both new construction and maintenance painting are economically important, the more difficult conditions involved in painting over existing finishes make this an important class of situations for research. Consumer surveys show that the most important mode of paint failure is peeling and flaking which, in its various manifestations, accounts for about half of residential paint problems. Such problems often occur within two to three years after painting. Color changes (deterioration) are next in importance. Although chalking and erosion have been observed their roles in decisions to repaint are less apparent. The trends in paint usage and performance are generally supportive of (or not inconsistent with) the hypothesis that air pollution or acid rain may be having some adverse effects, although such data are by no means conclusive. The report recommended that selections of coatings and substrate for acid deposition research include those combinations that are widely used (latex over wood and over previous paint) and those that are sensitive to acid deposition (paints containing $CaCO_3$; alkyd paint over steel). 38 refs., 28 figs., 5 tabs.

37164 (CONF-8905148–1) **Field studies for determining the characteristics and dynamics of local circulations.** Gudiksen, P.H.; Clements, W.E.; Hosker, R.P. Jr.; Whiteman, C.D.; Neff, W.D.; Coulter, R.L.; Start, G.E. Argonne National Lab., IL (USA). 1989. 39p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. From 2. international workshop on real-time computing of the environmental consequences of an accidental release to the atmosphere from nuclear installations; Leuembourg, Netherlands; 16-19 May 1989. Order Number DE89013639/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The US Department of Energy sponsored Atmospheric Studies in Complex Terrain (ASCOT) program is designed to improve our understanding of the physical processes that govern pollutant dispersion in areas of complex terrain and to develop the technology needed to predict the air quality impact of pollutants released into terrain dominated flows. The focus of the program has been on the study of the characteristics of locally generated valley circulations with the primary emphasis being on evaluating the life-cycle of nocturnal cold air slope and valley flows. This phenomenon was selected on the basis of its importance for transporting pollutants from energy related facilities to population centers that are generally situated within valleys. The program's field studies component, which is closely integrated with the modeling activities, provides the data needed to evaluate the characteristics and dynamics of locally generated valley circulations. The Geysers geothermal area in northern California, situated within the coastal-mountain range, was chosen as the initial field studies area. Three series of major field experiments were performed in this area during the period from 1979 to 1981. 12 figs.

37165 (DOE/ER/60290–T2) **Trajectory analysis of nine years of precipitation chemistry in Charlottesville, Virginia: Final report.** Moody, J.L.; Galloway, J.N. Virginia Univ., Charlottesville, VA (USA). Dept. of Environmental Sciences. 6 Jun 1988. 109p. Sponsored by DOE Energy Research. DOE Contract FG05-85ER60290. Order Number DE89014532/JAW. Available from NTIS, PC A06/MF A01 - OSTI; GPO Dep.

Precipitation has been collected in Charlottesville, Virginia, since 1976 as part of the Multi-State Air Pollution Power Production Study. Based on the chemical analyses of these precipitation events we know that Charlottesville regularly receives acidic precipitation. The average volume weighted hydrogen ion concentration is 54.8 umoles/liter, which corresponds to a pH of 4.3. The pH of natural uncontaminated precipitation is around 5.4, and since pH is measured on a logarithmic scale, this indicates that on the average, precipitation in western Virginia is at least ten times more acidic than normal. However, there is considerable variability in acidity, and indeed all the ion concentrations which contribute to acidity, from one precipitation event to the next. The basic scientific objective of this study was to learn to what degree this variability in concentration results from precipitation arriving from different source regions. To this end, we have used back trajectories to determine where air delivering precipitation to Charlottesville originated. The result is a climatology of transport for precipitation events over the nine year period from 1977–1985. 24 refs.

37166 (EC–1988, pp. 121-134) **Experiences in modelling water and land resources within a climate change framework.** Cohen, S.J. (Atmosphere Environment Service, Downsview, ON, Canada). Environment Canada, Ottawa, ON (Canada). 1988. (CONF-8611291–: Perspectives on land modelling, Toronto, Canada, 17-20 Nov 1986;MICROLOG–88-06350). In *Perspectives on land modelling. Workshop proceedings.* Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

The purpose of this paper is to describe some recent modelling of impacts of future climatic change on water and land resources at the regional scale. The key element in this exercise is that climate is being considered as a variable, rather than a constant. In certain cases, such as water resources, existing models could already use climate data directly to perform the required calculations. A major obstacle to regional modelling is the mismatch of scales between global climate model resolution and the detail needed for such projects as net basin supply calculations for individual watersheds. This requires some interpolation of the climate model outputs, including the use of existing station data to provide a higher resolution projection of the greenhouse effect climate. Results of an interdisciplinary pilot study on the impacts of CO_2-induced climatic change on the province of Ontario are briefly presented. A scenario derived from a general circulation model developed by the Goddard Institute for Space Studies was used. Net basin supply and lake levels in the Great Lakes are projected to decrease. Impacts include losses in hydroelectric power production, shipping, skiing, and agriculture. However, there would be savings due to reduced demand for space heating, and gains in summer recreation. 24 refs., 2 figs., 3 tabs.

37167 (EC–1988, pp. 135-147) **Effects of climatic change on agricultural land resource potential.** Brklacich, M. (Univ. of Guelph, Guelph, ON, Canada); Smit, B. Environment Canada, Ottawa, ON (Canada). 1988. (CONF-8611291–: Perspectives on land modelling, Toronto, Canada, 17-20 Nov 1986;MICROLOG–88-06350). In *Perspectives on land modelling. Workshop proceedings.* Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

This study estimates the extent to which a doubling in atmospheric CO_2 might affect food production opportunities throughout Ontario. It assesses the possible impacts of a CO_2 doubling on agroclimatic resources, crop productivity levels, and economic suitability of land resources for crop production. The analysis is facilitated by a land modelling system with which it is possible to evaluate implications of environmental (and other) changes on the distribution of land resources for food production. The specified changes in climate would imply a more favorable climate for crop production in the northern portions of Ontario. A wider array of crops could be grown and forage yields would increase. Production opportunities for crops currently grown in the southern parts of Ontario would be diminished. Overall, the specified changes in climate would reduce the biophysical prospects for crops currently grown in Ontario. 7 refs., 5 figs., 2 tabs.

37168 (EPS–3/UP/5) **National incinerator testing and evaluation program. Environmental characterization of mass burning incinerator technology at Quebec City. Summary report.** Environnement Canada, Ottawa, ON (Canada). Conservation et Protection. 1988. 111p. (MICROLOG–88-06241). Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

The environmental characterization of mass burning incinerator technology has been tested under a program whose objective was to define the optimum design and operating conditions to minimize emissions of concern. The facility tested is located in Quebec City, and was built in 1974. The furnace is of the waterwall type and the incinerator plant produces superheated steam for sale to a paper company. Five performance conditions were selected for extensive testing. All incoming wastes and ash residues were weighed, sampled, and analyzed. Key incinerator operating variables were monitored by an extensive computer network. A wide range of analyses was carried out on exhaust gas emissions and all the ash discharges. Under good operating conditions, dioxin emissions from the modified furnace were 40 to 100 times lower than for the original facility. Even under poor operating conditions, dioxins from the new furnace were an order of magnitude lower. A similar decrease in particulate emissions was observed. Significant multi-variate correlations were found between a number of trace organic emissions and operating variables such as combustion air flow rates, underfire/overfire ratio, and refuse feed rates. These variables were identified as potential control parameters that could be used to control incinerator operating conditions to ensure minimal trace organic emissions. In addition, strong correlations were identified between trace organic emissions and easily monitored variables such as carbon monoxide, excess oxygen, nitrogen oxides, and furnace temperature, which could be employed as early warning signals of high emissions. 14 refs., 35 figs., 26 tabs.

37169 (EPS–3/UP/5F) **National incinerator testing and evaluation program. Environmental characterization of mass burning incinerator technology at Quebec City. Summary report.** Environnement Canada, Ottawa, ON (Canada). Conservation et Protection. 1988. 125p. (In French). (MICROLOG–88-06240). Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

The environmental characterization of mass burning incinerator technology has been tested in Quebec City under a program whose main objective is to define the optimum design and operating conditions to minimize emissions of concern. The incinerator furnace tested is of the waterwall type and the incinerator plant produces steam for sale to a paper company. A new furnace design was evaluated during a three-month period. Five performance conditions were selected for extensive testing and all incoming wastes and ash residues were analyzed. Key operating variables were monitored by a computer network. A wide range of analyses was carried out on exhaust gas emissions and all the ash discharges. Under good operating conditions, dioxin emissions from the modified furnace were 40 to 100 times lower than for the original facility, achieving concentrations of 10 to 100 ng//Nm^3. Even under poor operating conditions, dioxins from the new furnace were an order of magnitude lower. A similar decrease in particulate emissions was observed. Significant multi-variate correlations were found between a number of trace organic emissions and operating variables such as combustion air flow rates, underfire/overfire ratio, and refuse feed rates. These variables were identified as potential control parameters that could be used to control incinerator operating conditions to ensure minimal trace organic emissions. In addition, strong multi-variate correlations were identified between trace organic emissions and easily monitored variables such as carbon monoxide, excess oxygen, nitrogen oxides, and furnace temperature, which could be employed as early warning signals of high trace organic emissions. 14 refs., 35 figs., 26 tabs.

37170 (ETDE-mf–9788269) **Ozone measurements near the ground and in the atmosphere in the first half-year 1988.** Deutscher Wetterdienst, Hohenspeissenberg (Germany, F.R.). Meteorologisches Observatorium. 1988. 180p. (In German). Order Number DE89788269/JAW. Available from NTIS (US Sales Only), PC A09/MF A01.

Sonderbeobachtungen des Meteorologischen Observatoriums Hohenpeissenberg.; no. 59.

Diagrams and tables, also for SO_2 in surface air.

37171 (Juel–2257) **Studies as to the measurement and the chemistry of formaldehyde and acetaldehyde in the lower troposphere.** Schubert, B.; Schmidt, U.; Ehhalt, D.H. Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Atmosphaerische Chemie; Koeln Univ. (Germany, F.R.). Dec 1988. 205p. (In German). Order Number DE89788343/JAW. Available from NTIS (US Sales Only), PC A10/MF A01.

A method for determining formaldehyde mixing ratios in tropospheric air has been modified for the additional measurement of acetaldehyde. The technique is based on stripping of the aldehydes from the air into an aqueous 2,4-dinitrophenylhydrazine solution. The reaction products, the 2,4-dinitrophenzlhydrazones of the respective aldehydes, are separated using high performance liquid chromatography and quantified by UV absorption. In clean air, measurements can be performed with a time resolution of two hours. Formaldehyde and acetaldehyde mixing ratios were determined in continental air and over the Atlantic Ocean. In slightly polluted continental air, the mean mixing ratios of formaldehyde and acetaldehyde were 1.53 $\pm$ 0.76 ppb and 0.52 $\pm$ 0.61 ppb, much higher than the mean values of 0.41 $\pm$ 0.19 ppb for formaldehyde and 0.19 $\pm$ 0.13 ppb for acetaldehyde observed in marine air. Simultaneous measurements of ethene and propene concentrations showed a similar latitudinal distribution as formaldehyde mixing ratios, confirming the importance of alkenes for the aldehyde production predicted by models. The influence of nonmethane hydrocarbons is further indicated by the fact that the formaldehyde mixing ratios are correlated with the fact that the formaldehyde mixing ratios are correlated with the sum of the C_2-C_4 hydrocarbon concentrations in both, marine and continental air.

37172 (NRCC/IMR–28908) **Performance of sulfation and nitration plates used to monitor atmospheric pollutant deposition in a real environment.** Noel, D.; Hechler, J.; Roberge, H. National Research Council of Canada, Boucherville, PQ (Canada). Industrial Materials Research Inst. [1989]. 26p. (MICROLOG–89-00544). Available from Canada Institute for Scientific and Technical Information, Montreal Rd., Ottawa, ON, Canada K1A 0S2; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

Sulfation and nitration plates were exposed outdoors for various periods of time to evaluate their performance in a real environment. These passive monitors are used to estimate the deposition of pollutants on metallic surfaces, and thus to evaluate the influence of the atmosphere on the corrosion. Single-column ion chromatography was used to determine the quantity of anions absorbed on the plates. This technique is better than other analytical procedures such as turbidimetry or colorimetry because passive monitors exposed in an atmosphere with a low degree of pollution can be analyzed without preconcentration. However, the pH of the sample to be injected on the chromatographic column must be adjusted to between 6.0 and 12.0 in order to obtain reproducible sulfate values. For sulfation plates, the additivity of the deposition process is excellent for a period of exposure up to 3 months, with a reproducibility of about 2%. For nitration plates, the deposition process is not cumulative due to a physical change of the monitor during exposure. The correlation between the amounts of sulfate found on sulfation snd nitration plates was also examined. 16 refs., 6 figs., 5 tabs.

37173 (ORNL/CDIAC–25) **Estimates of CO_2 emissions from fossil fuel burning and cement manufacturing, based on the United Nations energy statistics and the US Bureau of Mines cement manufacturing data.** Marland, G.; Boden, T.A.; Griffin, R.C.; Huang, S.F.; Kanciruk, P.; Nelson, T.R. Oak Ridge National Lab., TN (USA). May 1989. 712p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. (NDP–030). Order Number DE89013739/JAW. Available from NTIS, PC A99/MF A01 - OSTI; GPO Dep.

This document presents global and national estimates of annual carbon dioxide (CO_2) emissions from fossil fuel burning and cement manufacturing for 1950–1986. These estimates are based on statistics from the Untied Nations and the US Bureau of Mines. These estimates and supporting data are available free-of-charge as a numeric data package (NDP) from the Carbon Dioxide Information Analysis Center. The NDP consists of this document and magnetic tapes containing machine-readable data files, a descriptive file, and computer codes to access the data files. This document summarizes the emission estimates in tabular and graphical form, describes the calculations, describes how the data were processed, defines limitations of the data and estimates, describes the information on the tapes, and provides reprints of pertinent literature. The CO_2 emission estimates show that the annual amount of CO_2 produced globally from fossil fuel burning and cement production has risen significantly since 1950. 18 refs., 3 figs., 16 tabs.

37174 (ORNL/FTR–2999) **[Workshop on global vegetation models, Laxenburg, Austria, 3 June–9 August 1988]: Foreign trip report.** Emanuel, W.R. Oak Ridge National Lab., TN (USA). 24 Aug 1988. 11p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014060/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The International Institute for Applied Systems Analysis (IIASA) is beginning the development of a global vegetation model. In April 1988, a major international workshop summarized and evaluated available concepts, data, and formalisms. An extended workshop during June and July reviewed findings of the April meeting and other background information. From this review, a framework for analyzing global vegetation dynamics and responses to environmental change was designed. A core plant growth module was derived and implemented.

37175 (ORNL/FTR–3009) **[Fifth international congress of plant pathology, Kyoto, Japan, August 23–27, 1988]: Foreign**

trip report. McLaughlin, S.B. Jr. Oak Ridge National Lab., TN (USA). 12 Sep 1988. 10p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014062/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The traveler was invited to present two papers at Symposium XV of the Fifth International Congress of Plant Pathology. The major topics of the sessions within the symposium were (1) physiological and biochemical responses to air pollution, (2) air pollution-vegetation effects models, (3) joint action of multiple pollutants, and (4) acidic deposition. In the last session, the traveler presented two papers on the effects of air pollutants on forests. One described results of ongoing ORNL research on the physiological responses of red spruce to ambient pollution levels at high-elevation sites in the Great Smoky Mountains. The second provided an overview of the research being done in the Southern Commercial Forest Research Cooperative and used selected results from ORNL and other programs to illustrate results reported to date. Relevant information was obtained from several papers on mechanisms of action of chronic air pollution stress; this information may be useful in evaluating the mechanistic basis of pollutant impacts on forest trees. 20 refs.

37176 (ORNL/FTR–3047) **[European aerosol conference and workshop on aerosol deposition to natural surfaces, Lund, Goteborg, and Stockholm, Sweden, and Oslo, Norway, August 29–September 17, 1988]: Foreign trip report.** Lindberg, S.E. Oak Ridge National Lab., TN (USA). 28 Sep 1988. 15p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014061/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The purpose of this trip was to (1) present a paper and chair a session on gas/particle interactions at the European Aerosol Conference (EAC) at the University of Lund, Sweden; (2) chair a working group and present a plenary lecture at the workshop of the Nordic Society for Aerosol Research (NOSA) on Aerosol Deposition to Natural Surfaces; (3) present seminars at the University of Stockholm and the Swedish Environmental Research Institute; (4) analyze data from the Integrated Forest Study research site at Nordmoen, Norway; and (5) present a plenary lecture at the NATO Advanced Research Workshop on Heavy Metals in the Atmosphere at the Norwegian Institute for Air Research. At the EAC, the traveler presented a paper titled "Aerosol Dry Deposition Estimates from a Throughfall Model." At the NOSA workshop, the traveler described a summary of recent applications of surface analysis methods to aerosol deposition in complex terrain. At the University of Stockholm and the Swedish Environmental Research Institute, the traveler presented seminars on recent results of the EPRI Integrated Forest Study on the Effects of Atmospheric Deposition. At the NATO workshop, the traveler presented a lecture titled "Behavior of Trace Metals in Forest Systems." 19 refs.

37177 (PB–89-164305/XAB) **User's guide to SDM- a Shoreline Dispersion Model.** PEI Associates, Inc., Cincinnati, OH (USA). Sep 1988. 225p. Available from NTIS, PC A10/MF A01.

The Shoreline Dispersion Model (SDM) is a multipoint Gaussian dispersion model that can be used to determine ground-level concentrations from tall stationary point sources that are influenced by the unique meteorological phenomena in a shoreline environment. The SDM model is a hybrid model that utilizes a shoreline fumigation model to determine the hours during the year when fumigation events are expected and that uses the EPA MPTER model to determine the remaining hours. The advantage of the SDM hybrid model is that it can provide the total impact of a source, i.e., the source itself and other nearby sources. This user's guide provides an overview of the program, its routines and algorithms, and describes the model input/output.

37178 (PB–89-164560/XAB) **HEGADAS: heavy gas dispersion program. User's guide.** Witlox, H.W.M.; Puttock, J.S.; Colenbrander, G.W. Shell Research Ltd., Chester (UK). Aug 1988. 105p. Available from NTIS, PC A06/MF A01.

For system on diskette, see PB–89-164552.

The HEGADAS program models the dispersion of releases of heavier-than-air gases to the atmosphere. The model is an integral model which uses assumed profile (e.g., concentration profile) shapes and empirical relations describing air entrainment. The model provides for a smooth transition to passive dispersion. Descriptions of heat transfer from the ground and water vapor transfer are also included. The source release rate may be constant or time-dependent (e.g., evaporating liquid pool).

37179 (PB–89-164651/XAB) **Preliminary survey report: control technology support for sensor, Unimin Corporation, Dividing Creek Sand Plant, Millville, New Jersey, August 16, 1988.** O'Brien, D.M.; Sheehy, J.W. National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Dec 1988. 9p. (ECTB–171-12A). Available from NTIS, PC A02/MF A01.

A walk-through survey was conducted at the Dividing Creek Sand Plant, Millville, New Jersey as part of a study to determine the need for improving engineering controls in a sand-mining operation. Sand was dredged, sized, washed, purified of iron-containing impurities, dried, and loaded onto rail cars or trucks. A total of 24 hourly and nine salaried individuals were employed at this facility. In the processing facility the operator worked in an air-conditioned control room; and in the drying and loading areas, workers spent considerable time in air-conditioned sheds. Roof fans provided dilution ventilation in the processing plant. No local exhaust was used. In the drying facility air from the fluidized bed dryer was exhausted through a wet scrubber. A baghouse sitting atop one silo provided bin venting for the silos and exhaust for the final bucket elevator and the loading spouts. Processing areas were remarkably free of spilled sand. Safety shoes, glasses and hard hats were required in all areas. Respirators were required in designated areas. A safety brochure was mandatory reading for all personnel and visitors. Routine monitoring of silica exposure was performed twice yearly. Since this site is using ventilated loading spouts, not common in this industry, a comparison might be made between this method and more conventional techniques.

37180 (PB–89-165237/XAB) **Testing of hair dryers for asbestos emissions.** Geraci, C.L.; Baron, P.A.; Carter, J.W.; Smith, D.L. National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Div. of Physical Sciences and Engineering. Sep 1979. 61p. Available from NTIS, PC A04/MF A01.

Portions of this document are not fully legible.

Tests were conducted on 30 hair dryers for the release of asbestos fibers into the effluent air to evaluate potential consumer exposure, for the Consumer Product Safety Commission. A hair-dryer test system was developed, consisting of a clean air source, a sampling duct assembly, several types of monitoring equipment and filter samplers. Generated samples were assessed by transmission electron microscopy capable of performing energy dispersive analysis of x rays and selected-area electron diffraction. Of the 30 dryers evaluated, 23 were home-use hand-held appliances, three were table-top hooded models, one was a hobby heat gun, and one was a heavy-duty commercial salon style dryer. The airborne asbestos concentrations generated by these dryers ranged from 0 to 0.11 structures/cm^3 and the mass concentrations ranged from 0 to 7652 nanograms/cm^3. No significant differences were noted whether the dryers were operated at high heat or at cycled heat.

37181 (PB–89-165922/XAB) **Evaluation of asbestos levels in two schools before and after asbestos removal. Final report.** Karaffa, M.A.; Chesson, J.; Russell, J. PEI Associates, Inc., Cincinnati, OH (USA). Mar 1989. 35p. Available from NTIS, PC A03/MF A01.

This report presents a statistical evaluation of airborne asbestos data collected at two schools before and after removal of asbestos-containing material (ACM). Although the monitoring data are not totally consistent with new Asbestos Hazard Emergency Response Act (AHERA) requirements and recent EPA guidelines, the study evaluates these historical data by standard statistical methods to determine if abated work areas meet proposed clearance criteria. The objectives of this statistical analysis were to compare (1) airborne asbestos levels indoors after removal with levels outdoors, (2) airborne asbestos levels before and after removal of asbestos, and (3) static sampling and aggressive sampling of airborne asbestos. The results of this evaluation indicated the following: the effect of asbestos removal on indoor air quality is unpredictable; the variability in fiber concentrations among different sampling sites within the same building indicates the need to treat different sites as

separate areas for the purpose of clearance; and aggressive sampling is appropriate for clearance testing because it captures more entrainable asbestos structures. Aggressive sampling lowers the chance of declaring a worksite clean when entrainable asbestos is still present.

37182 (PB–89-165997/XAB) **Health-hazard evaluation determination report No. 75-109, 110, 112, 114-274, Fairbanks Weighing Division, Colt Industries, St. Johnsbury, Vermont.** Rivera, R.O. National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Apr 1976. 17p. (HHE–75-109-274). Available from NTIS, PC A03/MF A01.

Also includes HHE-75-112-274 and HHE-75-114-274.

A health-hazard evaluation investigation was conducted by NIOSH on July 28-31 and December 1-5, 1975 at the Fairbanks Weighing Division, Colt Industries, St. Johnsbury, Vermont, a facility engaged in the manufacturing of weighting scales. The survey regarding the presence of potential toxic concentrations of any of the substances found in the place of employment. Based on environmental sampling, ventilation measurements, observation of work practices and medical questionnaires it was established that, with one exception, all welders in the production welding area were exposed to toxic concentrations of welding fumes and gases. No health hazards were identified in the plating room, heat-treatment operation, and grinding, sanding, and abrasive cut-off area. Recommendations are made for improving the exhaust system to effectively remove welding fumes and gases.

37183 (PB–89-166227/XAB) **Health-hazard evaluation determination report No. 75-178-295, New York Telephone and Telegraph Company, 770 Broadway, New York, New York.** Kingsley, I. National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Jun 1976. 7p. (HHE–75-178-295). Available from NTIS, PC A02/MF A01.

A health-hazard evaluation investigation was conducted by NIOSH on January 8, 1976 in a New York Telephone Company cable vault in New York City. The survey regarded worker exposure to styrene vapors while coating cable splices with polyester in telephone company cable vaults. Environmental sampling revealed that the workers were not exposed to hazardous airborne concentrations of styrene vapors. Routine operations were in progress at the time of this investigation, but the exposure may increase significantly during extended working periods. Therefore, recommendations are made to assure effective control under prolonged working hours.

37184 (PB–89-166235/XAB) **Health-hazard evaluation determination report No. 75-151-259, Winchester Hospital, Winchester, Massachusetts.** Levy, B.S.B. National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Jan 1976. 17p. (HHE–75-151-259). Available from NTIS, PC A03/MF A01.

A health-hazard evaluation investigation was conducted by NIOSH on September 29-30 and October 1, 1975 at the Winchester Hospital in Winchester, Massachusetts to determine the concentrations of waste anesthetic gases and vapors to which operating-room personnel were being exposed. On the basis of environmental sampling, it was determined that concentrations of nitrous oxide measured in the operating rooms, greatly exceeded 30 ppm and that the concentrations of halothane were usually in excess of the 0.5 ppm level. The existing scavenging system absorbs the halothane vapors but not the nitrous oxide. Recommendations are made for effective control of both anesthetics.

37185 (PB–89-166243/XAB) **Health-hazard evaluation determination report No. 74-78-297, Amax Speciality Metals, Parkersburg, West Virginia.** Thoburn, T.W. National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Jun 1976. 17p. (HHE–74-078-297). Available from NTIS, PC A03/MF A01.

A health-hazard evaluation investigation was conducted by NIOSH on July 16-19, 1974 at the Amax Speciality Metals, Parkersburg, West Virginia, a facility engaged in the production of nuclear-reactor-grade zirconium and hafnium from crude zirconium tetrachloride. Based on medical interviews and cutaneous examination of the exposed workers, personal observations made by NIOSH investigators, review of medical records and studies, and a review of the pertinent literature it was determined that a dermatitis problem and a respiratory irritancy problem existed in conjunction with the company's refining of zirconium and hafnium. In November 1974, zirconium operations were discontinued due to the inability to purchase or manufacture economically crude zirconium tetrachloride.

37186 (PB–89-166250/XAB) **Health-hazard evaluation determination report No. 73-185-256, Electromotive-Division, GMC (Plant 2), Chicago, Illinois.** Bloom, T.F. National Inst. for Occupational Safety and Health, Cincinnati, OH (USA). Jan 1976. 28p. (HHE–73-185-56). Available from NTIS, PC A03/MF A01.

A health-hazard evaluation investigation was conducted by NIOSH on May 16, July 15-16, and October 15-16, 1974 and June 25, 1975 at the ElectroMotive Division, GMC, Plant 2, Chicago, Illinois, a manufacturer of diesel-locomotive components. The survey regarded lack of ventilation in the welding areas, which allegedly did not remove welding fumes. On the basis of the findings obtained in a random sample of workers, it was determined that some welders were exposed to concentrations of iron oxide fumes. Welders were not exposed to toxic concentrations of carbon monoxide, ozone and nitrogen dioxide. The presence of eye and respiratory irritation indicates that an irritant exposure takes place from a possible synergistic effect from the combination of irritant gases and particulates. The potentially toxic exposure to carbon dioxide in one area could have been responsible for the high incidence of headaches. No evidence of systemic toxicity was observed. Recommendations are made for improved environmental-control measures.

37187 (PB–89-167654/XAB) **Statistics on smoke and sulfur dioxide pollution in South Africa. Special report.** Walker, N.; Ellerbeck, R.; Marinus, N. National Physical Research Lab., Pretoria (South Africa). Atmospheric Sciences Div. Mar 1987. 79p. (CSIR-SR-ATMOS–87/13). Available from NTIS, PC EE06/MF E06.

Also pub. as National Physical Research Lab., Pretoria (South Africa). Atmospheric Sciences Div. rept. no. ISBN-07988-4025-0. See also PB–88-192091. North American Continent sales only.

The data collected during the period October 1984 to September 1986 via the National Survey of Smoke and Sulfur Dioxide are presented. Throughout the period monthly averages, monthly maxima, and seasonal and annual averages are given. For each operational site, the long- and short-term trends are presented, along with their respective statistical significance. Work associated with the operation of survey and results from research studies undertaken during the report period is summarized and presented. Recommendations for the future expansion of the project are given.

37188 (PB–89-168728/XAB) **Southern California Air Quality Study: fall study. Final report.** Appel, B.R.; Tokiwa, Y.; Povard, V. California Dept. of Health Services, Berkeley, CA (USA). Air and Industrial Hygiene Lab. Jul 1988. 79p. (CA/DOH/AIHL/SP–50). Available from NTIS, PC A05/MF A01.

See also PB–86-223427.

Atmospheric sampling was performed during the fall portion of the Southern California Air Quality Study (SCAQS), on six intensive study days in November - December 1987 at Long Beach Community College. The investigators measured nitrous, nitric, and hydrochloric acids, in addition to ammonia and nitrogen oxides. These species were sampled with annular denuders and a chemiluminescent NOx analyzer. Nitrogen dioxide measured by the NOx analyzer averaged about 13% higher than without denuders to remove interferents such as HNO_3 and HONO. HONO exhibited maxima between 0000 and 0600 hours, with 6-hour mean concentrations up to 14 ppb. Some evidence of artifactual HONO in the denuders was shown, however. HCL exhibited a diurnal maximum between 1000 and 1400 hours, with concentrations up to 15 ppb. HN_3 concentrations exhibited maxima during night or morning hours, with four or six hour averages up to 15 ppb.

37189 (PB–89-169833/XAB) **National Performance Audit Program; ambient air audits of analytical proficiency, 1987.** Parr, B.F.; Lampe, R.L.; Hunike, E.T.; Mitchell, W.J. Environmental Protection Agency, Research Triangle Park, NC (USA). Atmospheric Research and Exposure Assessment Lab. Jan 1989. 53p. (EPA–600/3-89/006). Available from NTIS, PC A04/MF A01.

See also PB–88-161542.

The report presents the results of the U.S. Environmental Protection Agency's 1987 National Ambient Air Audit Program by pollutant and by analytical method. Semiannual audits were conducted for

CO, Pb, NO_3 and SO_4 (filter strips) and acid rain, and an annual audit was conducted for particulate sampler flow rate. Continuous SO_2 monitors were audited throughout the year such that no monitor was audited more than once. Approximately 45 laboratories participated in each semiannual acid rain audit and in each NO_3 and SO_4 audit and approximately 90 laboratories participated in each Pb audit. Five hundred and ninety-five CO monitors, 262 SO_2 monitors, and 1333 high volume flow samplers were also audited. The results for each 1987 audit are presented in tabular form for each concentration level. The overall performance for all participants for each audit conducted since the beginning of the program is also illustrated in a series of figures.

37190 (PB–89-170716/XAB) **Release of dispersed asbestos fibres from soils.** Addison, J.; Davies, L.S.T.; Robertson, A.; Willey, R.J. Institute of Occupational Medicine, Edinburgh (UK). Sep 1988. 158p. (TM–88/14). Available from NTIS, PC EE08/MF E08.

Both natural and industrial asbestos contamination in soil on sites required for development can present health hazards if the soil is to be disturbed. Very little information is available about likely airborne asbestos fiber concentrations which might be encountered in working such a site or on the possible suppressant effects of water spraying during work. The study is aimed at providing some basic relevant information to these problems. Artificial mixtures were prepared using three different soil types (clay, sand and intermediate) with each of three asbestos types (chrysotile, amosite, and crocidolite) in concentrations of 1%, 0.1%, 0.01% and 0.001%, by weight. Airborne dust clouds were generated over periods of four hours from each mixture using a dust dispenser discharging into a 1.3 cu m test chamber. Airborne dust concentrations were measured for the full duration of the test using gravimetric dust sampling instruments and a sequence of membrane filter samples were collected for fiber counting by phase contrast optical microscopy.

37191 (PB–89-170724/XAB) **Further studies of respiratory health of wool textile workers. Final report, October 1986-July 1988.** Love, R.G.; Donaldson, K.; Cullen, R.T.; Smith, T.A.; Muirhead, M. Institute of Occupational Medicine, Edinburgh (UK). Oct 1988. 129p. (TM–88/16). Available from NTIS, PC EE07/MF E07.

Contents include: plan of study and layout of report; estimated risks of symptoms in wool textile workers in relation to inspirable-dust concentration; lung functional and chest radiographic effects of wool dust exposure in textile workers; ability of wool-dusts to cause pulmonary inflammation in rats, and immunological responses in mice; further characterization of respiratory illnesses related to wool mill dust.

37192 (PB–89-172274/XAB) **National Air Audit System FY 1986-1987 national report. Final report.** Environmental Protection Agency, Research Triangle Park, NC (USA). Office of Air Quality Planning and Standards. Jan 1989. 144p. (EPA–450/2-89/003). Available from NTIS, PC A07/MF A01.

See also PB–86-169133.

The National Air Audit System (NAAS), which was developed jointly by EPA and representatives of State and local air-pollution-control agencies, was implemented for the first time in FY 1984, and audits were again conducted in FY 1985. The report for FY 1986-1987 indicates that State and local agencies generally have sound programs in each of the audited areas and the audited agencies show improvement over the previous audits. There are still areas where improvement is needed, however, and various remedial actions have been initiated. A task force is also being formed to assess how to improve the function of the NAAS, to make the audit results more comprehensive and useful.

37193 (PB–89-860910/XAB) **Electrostatic precipitators. January 1979-April 1989 (Citations from the NTIS data base). Report for January 1979-April 1989.** National Technical Information Service, Springfield, VA (USA). May 1989. 226p. Available from NTISPC N01/MF N01.

Supersedes PB–88-859053.

This bibliography contains citations concerning the utilization of electrostatic precipitators for air-pollution control in industrial plants and electrical power-generating facilities. Topics include theoretical analyses, field investigations of specific installations, and performance comparisons with other particulate removal systems. Economic evaluations and system design considerations are presented. (This updated bibliography contains 400 citations, 41 of which are new entries to the previous edition.)

37194 (PB–89-861017/XAB) **Atmospheric modeling of air pollution. September 1984-March 1988 (Citations from the NTIS data base). Report for September 1984-March 1988.** National Technical Information Service, Springfield, VA (USA). May 1989. 177p. Available from NTISPC N01/MF N01.

See also PB–89-861025.

This bibliography contains citations concerning the development, validation, and application of mathematical models for air-pollution studies of mobile and stationary pollution sources. The models cover a wide range of mathematical complexity, utilizing factors such as terrain features, wake effects, diffusion, atmospheric stability, atmospheric wind, precipitation scavenging, gravitational deposition, atmospheric photochemistry, and urban heat islands. The models are used to support environmental-impact studies and effects of proposed emission-control strategies. Excluded are models of stratospheric pollution behavior, as applied to high-flying aircraft. (This updated bibliography contains 352 citations, none of which are new entries to the previous edition.)

37195 (UCRL–53903) **Effects of trace gases on global atmospheric chemical and physical processes.** Kinnison, D.E. Lawrence Livermore National Lab., CA (USA). 26 May 1989. 262p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-48. Order Number DE89013887/JAW. Available from NTIS, PC A12/MF A01 - OSTI; GPO Dep.

Thesis. Submitted to Univ. of California, Berkeley.

This study examines the effects that increased emissions of anthropogenic and naturally-occurring trace gases have on the chemical and physical processes in the global temperature. The Lawrence Livermore National Laboratory (LLNL) one- and two-dimensional chemical-radiative-transport models of the troposphere and stratosphere, are used to calculate the net effects that variations in these trace gases, either individually, or taken together have on the ozone distribution and temperature structure. Using the LLNL one-dimensional model, calculation are made that include large changes of NO_x, Cl_x, and HO_x. The object was to see of any interesting or unexpected effects could be found. The nitrous oxide boundary value is varied from 1/4 to 8 times the reference (1960) value of 300 ppbv. Stratospheric Cl_x, is varied from 0 to 22 ppbv. Special atmospheres are considered in which all HO_x, NO_x, and Cl_x, or combinations of these are omitted from the reference atmosphere. A sensitivity study is carried out using the LLNL one- and two-dimensional chemical-radiative-transport models to examine possible effects of future aircraft NO_x emissions on stratospheric ozone. A broad range in magnitude, altitude, and latitude of the assumed NO_x emissions is examined for various background Cl_x values. The change in column-ozone is calculated for each sensitivity scenario relative to a reference atmosphere. 217 refs.

37196 (UCRL–99927-Rev.1) **Evaluating CFC [chlorofluorocarbon] alternatives from the atmospheric viewpoint: Revision 1.** Connell, P.S.; Wuebbles, D.J. Lawrence Livermore National Lab., CA (USA). May 1989. 12p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890692–13-Rev.1: 82. Air and Waste Management Association annual meeting and exhibition, Anaheim, California, USA, 25-30 Jun 1989). Order Number DE89014268/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Current understanding of atmospheric processes in the troposphere and stratosphere, in particular stratospheric ozone-controlling photochemistry, allows evaluation of the effects on the stratosphere of chlorine-containing compounds envisioned as CFC (chlorofluorocarbon) replacements prior to their production and release. Such evaluations can help to direct decisions on selecting CFC alternatives and define acceptable levels of production or emission. We employ a two-dimensional (latitude and altitude) computational representation of the troposphere and stratosphere which incorporates physical processes, e.g., species transport and radiative transfer, and homogeneous photochemical processes. Laboratory measurements of OH and $O(^1D)$ reactivity and spectral parameters of the alternative HCFC (hydrochlorofluorocarbon) compounds were used as input. The model-derived ozone depletion

potential (ODP) is a defined quantity relating the effect on ozone of emission of a species to the model-calculated effect of a standard compound, here CFC-11 ($CFCl_3$). Globally and annually averaged ozone depletion potentials vary from less than .02 to greater than 1.0 for various CFCs and HCFCs, primarily as a result of differences in calculated atmospheric lifetimes. Differences in stratospheric photochemistry among CFCs and HCFCs play a smaller but significant role. Zonally averaged ODPs for some compounds can range over a factor of three with latitude, however, as a result of differences in stratospheric lifetime and the altitude profile of Cl release in CFC or HCFC loss processes. While globally defined ODPs are useful in designing methods to reduce the overall stratospheric Cl burden and its impact on ozone, latitudinally and seasonally varying ODPs must be additionally considered as knowledge of specific areas of the impacts of decreasing ozone column abundance increases. 6 refs., 4 figs., 4 tabs.

37197 Errors in grab sample measurements of N_2O from combustion sources. Muzio, L.J. (Fossil Energy Research Corp., Laguna Hills, CA (USA)); Teague, M.E.; Kramlich, J.C.; Cole, J.A.; McCarthy, J.M.; Lyon, R.K. *JAPCA, International Journal of Air Pollution Control and Waste Management (USA)*, 39(3): 287-293 (Mar 1989). DOE Contract AC22-84PC70771.

An artifact in the use of grab sampling techniques for the measurement of N_2O emissions from fossil fuel combustion has been identified. Storing combustion products containing SO_2, NO_x and water for periods as short as two hours can lead to the formation of several hundred parts per million of N_2O where none originally existed. The amount of N_2O formed depends both on the amount of NO_x and SO_2 originally in the container. The experimental results are supported by a proposed chemical mechanism and kinetic calculations. An investigation of sampling protocols indicate that drying the gas to a 0°C dewpoint before introduction in the container reduces, but does not eliminate, N_2O formation. More complete drying may yield a valid sample although this approach has, as yet, not been evaluated. Valid grab samples can be obtained by either (1) removing the SO_2 before introducing the gas into the container; or (2) increasing the pH of the aqueous phase in the container with NaOH. The findings of this work has important consequences with respect to the role of combustion generated N_2O in the atmospheric N_2O balance, since much of the present data base has been obtained using grab sampling techniques.

37198 (CEA-DAS–561) **Test emission of uranium hexafluoride in atmosphere. Results interpretation.** Crabol, B. CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. d'Analyse de Surete. Jan 1989. 14p. (In French). (CONF-8810351–: Meeting on uranium, Montpellier, France, 10-12 Oct 1988). Order Number DE89781564/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

To permit the modelization of gaseous uranium hexafluoride behaviour in atmosphere, a validation test has been executed the 10 April 1987. The experimental conditions, the main results and a comparison with a diffusion model are given in this report.

37199 (GAO/RCED–88-103) **Indoor radon.** General Accounting Office, Washington, DC (USA). Resources, Community and Economic Development Div. 1988. 63p. Available from US General Accounting Office, PO Box 6015, Gaithersburg, MD 20877.

Potentially hazardous levels of radon may be present in one out of every eight houses in the United States. One of the Environmental Protection Agency's major radon identification efforts has encountered delays, and its planned national assessment is still years from competition. Its initial tests of various mitigation techniques have demonstrated significant radon reductions but the techniques still need to be tested in a larger number of houses. Agencies which finance and insure civilian housing have radon activities ranging from responding to a few site-specific problems to not being involved with indoor radon issues at all. The limited involvement is due to the lack of a specific legislative mandate for an agency radon program. Courts have not addressed whether the federal government is required to compensate for or mitigate radon in housing when it acts as a seller, insurer, or landlord.

This document contains a cumulative index to the first through twentieth AEC, ERDA, DOE, and DOE/NRC Nuclear Air Cleaning Conferences and incorporates corrections of errors appearing in prior intermediate indexes.

37203 (ORNL–6542) **Pasture grass interception and retention of ^{131}I, ^{7}Be, and insoluble microspheres deposited in rain.** Hoffman, F.O.; Frank, M.L.; Blaylock, B.G.; von Bernuth, R.D.; Deming, E.J.; Graham, R.V.; Mohrbacher, D.A.; Waters, A.E. Oak Ridge National Lab., TN (USA). May 1989. 150p. DOE Contract AC05-84OR21400. Order Number DE89014567/JAW. Available from NTIS, PC A07/MF A01 - OSTI; GPO Dep.

Environmental Sciences Division Publication No. 3247.

During the summer of 1987, a series of field experiments was conducted for the National Cancer Institute to investigate the initial interception and postdeposition retention by pasture vegetation of soluble and insoluble forms of ^{131}I in rain. These experiments employed mechanical rain simulators to reproduce rain intensities ranging from 1.4 to 12.2 cm/h and droplet sizes of 1.7 and 2.5 mm. The tracers used in this study were ^{131}I as either iodide or periodate, $^{7}Be^{2+}$, and three size classes of radioactively labelled polystyrene microspheres (3, 9, and 25 μm in diameter). These materials were applied in simulated rain, in amounts varying from 1 to

30 mm, to pure stands of white clover and fescue and to mixed stands of old field vegetation. For either chemical form of ^{131}I, the fraction intercepted by vegetation over 5 cm tall decreased in almost direct proportion to the amount of rain. At low amounts of rain (1 to 2.5 mm) and high biomass (0.2 to 0. 3 kg_{dry}/m^2), the highest values of interception for ^{131}I ranged from 20 to 55%. At high amounts of rain (20 to 30 mm) and low values of biomass (0.05 to 0.12 kg_{dry}/m^2), the interception fraction decreased to about 0.6 to 2%. Unlike the results for ^{131}I, approximately 10 to 80% of the insoluble microspheres and soluble $^{7}Be^{2+}$ was intercepted by vegetation over 5 cm tall, with only minor differences attributed to the amount or intensity of rain. The most important variable for the vegetation interception of these substances was the amount of standing biomass. The effect of differences in vegetation type was minor compared to the combined influence of biomass and the amount and intensity of rain. 26 refs., 37 figs., 20 tabs.

37204 (WAPD-RC/E(EE)–451) **Effluent and environmental monitoring report for calendar year 1988.** Bettis Atomic Power Lab., West Mifflin, PA (USA). 1988. 78p. Sponsored by DOE Nuclear Energy. DOE Contract AC11-89PN38014. Order Number DE89013938/JAW. Available from NTIS, PC A05/MF A01 - OSTI; GPO Dep.

The results of the radiological and non-radiological environmental monitoring programs for 1988 at the Bettis Laboratory are presented. The results obtained from the monitoring programs demonstrate that the existing procedures ensure that all environmental releases during 1988 were in accordance with applicable Federal and State regulations. Evaluation of the environmental data indicates that operation of the Laboratory continued to have no adverse effect on the quality of the environment. Furthermore, a conservative assessment of radiation exposure to the general public as a result of Laboratory operations demonstrated that the dose received by any member of the public was well below the most restrictive dose limits prescribed by the Environmental Protection Agency and the Department of Energy. 27 refs.

During the current funding period, we have focused on two main areas: (1) a consideration of the water sources used by plants, (2) a consideration of the role, extent and significance of twig photosynthesis in aridland species, and (3) studies of variation in carbon isotopic composition in plants as an indicator of water-use efficiency (ratio of photosynthesis to transpiration). Although not specifically a research project, a substantial amount of time was also spent organizing and editing "Stable Isotopes in Ecological Research," which was the result of a very successful, DOE-OHER sponsored symposium bringing together terrestrial and marine ecologists to discuss this topic for the first time. 14 refs., 6 figs., 2 tabs.

37207 (EGG–10617-2015) **The occurrence and status of candidate species listed by the US Fish and Wildlife Service on Naval Petroleum Reserve No. 1, Kern County, California.** EG and G Energy Measurements, Inc., Goleta, CA (USA). Santa Barbara Operations. Nov 1988. 62p. Sponsored by DOE Environment Health & Safety. DOE Contract AC08-88NV10617. Order Number DE89013926/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

The distribution and status of four plant and nine animal species being considered by the US Fish and Wildlife Service (FWS) for protection under the Endangered Species Act and one animal species recently listed in the Act as endangered was determined for the Naval Petroleum Reserves in California (NPR-1 and 2). Hoover's woolly-star (Eriastrum hooveri), a Category 2 plant species, was located at 28 sites on NPR-1. The California jewelflower (Caulanthus californicus), Kern mallow (Eremalche kernensis), and San Joaquin woolly-threads (Lembertia congdonii) were not observed. Of these, the Kern mallow is most likely to occur based on habitat utilization and autecology. No evidence was gathered that suggests the Buena Vista Lake shrew (Sorex ornatus relictus) was present on either of the Reserves. Nelson's antelope ground squirrel (Ammospermophilus nelsoni) and the short-nosed kangaroo rat (Dipodomys nitratoides brevinasus) are both Category 2 mammals that were relatively abundant on NPR-1 and 2. The San Joaquin pocket mouse (Perognathus inornatus) was also captured on NPR-1 and 2, but was less numerous. The Tipton kangaroo rat (Dipodomys nitratoides nitratoides), a recently listed endangered species, was found in Section 23S of NPR-1 and Section 18H of NPR-2. No evidence was found that Morrison's blister beetle (Lytta morrisoni), Moestan blister beetle (Lytta moesta), Hopping's blister beetle (Lytta hoppingi), and the Molestan blister beetle (Lytta molesta) exist on either of the Reserves. Similarly, a survey conducted for the striped-skinned snail (Helminthoglypta callistoderma) found no evidence that the snail exists on either of the Reserves. No additional surveys for candidate species that were undetected are needed unless new evidence is collected that suggests the species are or may be present. 17 figs., 7 tabs.

37208 (INIS-BR–1539) **Contribution to origin of the reefs in northeastern.** Nobrega Coutinho, P. da; Farias, C.C. Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do Nordeste. 1979. 5p. (In Portuguese). (CONF-7911203–: 9. symposium of geology in northeast, Natal, Brazil, Nov 1979). Order Number DE89619691/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Several reef lines parallel to the seashore are encountered on the heaches of north east Brazil, composing one of the most characteristic morphological phenomena of the region. The textural and mineralogical composition of the reefs is very similar to the sediments met in the submarine beach. The initial comentation seems to take place beach. X-ray diffraction analyses showed that the cement of the first reef line of the intertidal zone is constituited of 60% aragonite and of 40% magnesium calcite with approximately 15-18 mol. %$MgCO_3$ in the calcite. The cement of the second reef line in the submarine beach is made up of solely calcite with only 3 mol. %$MgCO_3$. This proportion becomes even smaller in the cement in the reefs beneath the sand bank. The cement of these reefs is a result of the dissolution and precipitation of organic fragments present in the submarine beach sediments, especial Halimeda. The composition of these fragments appeared to be identical to the reefs of the intertidal zone. The magnesium calcite is mainly a result to the alteration of the aragonite, being the marine inorganic precipitation as a secondary process.

37209 (INIS-BR–1540) **Mineralogical behavior of the phosphatic sedimentation in Pernambuco-Paraiba sedimentar coastal basin.** Albuquerque Menor, E. de; Amaral, A.J.R. do. Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do

Nordeste. 1979. 12p. (In Portuguese). (CONF-7911203–: 9. symposium of geology in northeast, Natal, Brazil, Nov 1979). Order Number DE89619692/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

This work reports the execution of the "Phosphate in the Sedimentary coastal zone of Pernambuco-Paraiba" Project, resulting from the execution of 35 drilling holes distributed between Paulista City, State of Pernambuco and the Miriri river valley, State of Paraiba. The rocks were analysed by X-ray diffraction, and the results were used in the working up of mineralogical logs. The mineralogical logs interpretation makes possible to distinguish phosphorite and sandy phosphorite areas inside a mineralization zone, wich laterally passes to a phosphatic carbonatic rocks area situated far from cost line of that epoch. Differences of the mineral paragenesis are used under a regional sedimentar model conception and indicated as prospecting guides. The dominance of Kaolinite is related to continental sediments (Beberibe Formation). The dominance of montmorillonite, on the other hand, is more to marine facies than to particular conditions of the phosphatic mineralization. The analysis of these conditions shows that the continental areas resistant to the pre-Maestrichtrian transegressive oscillations coincide to the more favourable places to the phosphatic mineralization.

37210 (INIS-BR–1541) **Mineralogy of bismutotantalite from Northeastern. Brazil.** Adusumilli, M.S. Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do Nordeste. 1979. 10p. (In Portuguese). (CONF-7911203–: 9. symposium of geology in northeast, Natal, Brazil, Nov 1979). Order Number DE89619693/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Bismutotantalite samples were identified in the Carnauba dos Dantas pegmatites (State of Rio Grande do Norte). The study of the various species includes the optical characteristics and determination of X-ray fluorescence and diffraction whose results allowed to show the existence of ordered and disordered Bismutotantalites. The degree of "order-disorder" has been ascribed to the complex chemical composition and possible diadoch exchange between the Bi, $^{-}$Fe, $^{-}$Sn, $^{-}$Mn and Ta ions under influence of the varying physical and chemical conditions during the development of the pegmatite.

37211 Comparative analysis of broad-scale landscape patterns. Gardner, R.H. (Oak Ridge National Lab., Oak Ridge, TN (US)); Turner, M.G.; Milne, B.T.; O'Neill, R. *Bulletin of the Ecological Society of America (USA),* 68(3): 308 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

The effects of ecological processes on observed landscape patterns can be studied by using models which are neutral to the processes of interest. When USGS land use data (LUDA) were compared to data from neutral landscape models, significant differences in the number, size distribution of patches, and the area/perimeter (fractal) indices were found. Results have shown that landscape patterns are dependent on the scales at which they are measured. Therefore, it is critical to identify the appropriate scales and map resolution at which disturbance and landscape processes interact.

37212 The role of heterogeneity in structuring spatial hierarchies. O'Neill, R.V. (Environmental Sciences Div., Oak Ridge National Lab., Oak Ridge, TN (US)). *Bulletin of the Ecological Society of America (USA),* 68(3): 380 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

Following a paradigm based on Statistics and Newtonian physics, ecology often emphasizes the central tendency of observations and considers heterogeneity as extraneous noise. This approach ignores heterogeneity as an important measure of ecological systems. The present paper discusses two ways that heterogeneity characterizes the spatial hierarchies we observe on a landscape. As an exogenous factor, heterogeneity transforms a uniform landscape into a diverse array of habitats. Topography, moisture gradients, etc., create a spectrum of opportunities for species establishment. Heterogeneity compresses space, allowing a larger number of species to survive in a given area. As an endogenous factor, heterogeneity results from competition and natural selection acting to fill the available niches. In either case, heterogeneity is critical to understanding spatial hierarchies and community structure.

37213 Regeneration patterns in a southeastern floodplain forest. Sharitz, R.R. (Savannah River Ecology Lab., Aiken, SC (US)); Martin, N.E.; Schneider, R.L. *Bulletin of the Ecological Society of America (USA),* 68(3): 414 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

Hydrologic regime exerts a critical control on regeneration processes in floodplain wetlands. Community composition, seed rain, seedling establishment and survivorship patterns of woody species are compared in two bottomland hardwood communities along the same stream. These sites differ in flooding frequency and duration. Total species composition and numbers of seeds differed between the two sites over a two-year period. although seedling composition and densities also differed, first year survivorship for all species combined was high (70-80%) at both sites and not statistically different. However, of the two canopy dominants, intraspecific differences in survivorship between upstream and downstream sites were demonstrated by Liquidambar styraciflua (50 vs. 77%) but not by Acer rubrum (80 vs 74%). Seedling mortality patterns of most species were similar following winter, spring frost, summer flooding, and drought at both sites.

37214 Response of wetland herb communities to gradients of disturbance and substrate. Scott, M.L. (Savannah River Ecology Lab., Aiken, SC (US)); Dunn, C.P. *Bulletin of the Ecological Society of America (USA),* 68(3): 412 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

The effect of thermal disturbance and site characteristics on the distribution of herbs was studied in portions of a 3020 ha wetland in the southeastern U.S. Data were collected from four sites with different disturbance histories. Rank correlations between DCA ordination scores and site characteristics indicate that species composition differences among sites were associated with disturbance. Within site differences are related to water depth and substrate type. For all sites along the disturbance gradient, species richness is greatest on consolidated muck. Fewest species occur on loose muck at the most disturbed site (x-bar=1.9), whereas at the other two disturbed sites, logs support fewest species (x-bar=4.1 and 4.2). After 18 yrs of revegetation at a fourth site, vegetation patterns are moderately correlated with water depth (r=0.52). The authors' results fit such mechanistic concepts as the intermediate disturbance hypothesis and the subsidy-stress gradient.

37215 (CONF-8805296–1) **Report on Working Group deliberations: Water quality group.** Wesely, M.L. Argonne National Lab., IL (USA). 1988. 4p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. From First regional workshop on integrated monitoring; New Brunswick, Canada; 31 May - 2 jun 1988. Order Number DE89013193/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Major effects on monitoring of water quality are currently active in transboundary areas that include the St. Croix River Basin, at the Kejimkujik Research Station in Nova Scotia, and in Atlantic coastal waters. A large number of agencies in Canada and the United States are involved in measurements of variables that range from water pH to bioaccumulation of toxic substances. At least five of the projects are considered long-term and continuous. Needs expressed most often by the Working Group were for greater accessibility by various user groups to data from multiple sources and more continuous monitoring efforts for toxic organic substances. Many of the Working Group members were particularly concerned with efficient use of available data for addressing problems as perceived by the public.

37216 (CONF-8905162–1) **Containment of organic leachates from leaking underground storage tanks using tailored soils as liners.** Peters, R.W.; Cadena, F.; Page, M.W. Argonne National Lab., IL (USA). 1989. 36p. Sponsored by Department of Defense.

DOE Contract W-31109-ENG-38. From Hazardous waste and environmental management in gas industry; Chicago, IL, USA; 1-2 May 1989. Order Number DE89013180/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The technical feasibility of using tailored soils for containment of hazardous organic pollutants has been demonstrated. The adsorptive properties of soils for benzene are dramatically improved using organophilic coatings. Tailoring of the soils results in a highly selective adsorbent, which have a great capacity to remove benzene, toluene, and xylene (BTX) compounds. All four soils studied showed significant adsorptive capacity improvement after tailoring with tetramethylammonium ions (TMA^+). The optimum TMA^+:CEC (cation exchange capacity) ratio was between 0.6 and 1.5. Soils tailored at TMA^+ doses as low as 50% of the CEC of the soil removed significant amounts of benzene from solution. pH plays a secondary role in the adsorption of benzene on the tailored soils. The capacities for benzene removal under dynamic column conditions were about 40–75% lower than those predicted from batch adsorption studies. The holdup of benzene increases with increasing clay content of the soils. The breakthrough curves for the pollutant movement through the soil columns can be predicted using conventional one-dimensional solute transport models. 28 refs., 10 figs., 4 tabs.

37217 (DOE/FC/10618–T1) **Ion exchange and soil attenuation of Gulf Coast and Great Plains soils: Final report.** Hassett, D.J.; Groenewold, G.H.; Stevenson, R.J.; Schmit, C.R.; Daly, D.J. North Dakota Univ., Grand Forks, ND (USA). Energy and Mineral Research Center. 15 Sep 1988. 100p. Sponsored by DOE Fossil Energy. DOE Contract AC21-84FC10618. Order Number DE89010850/JAW. Available from NTIS, PC A05/MF A01 - OSTI; GPO Dep.

There are many trace elements, including arsenic, selenium, and molybdenum, which can occur in significant concentrations in ash from low-rank coals. These elements have the potential to be leached from disposed ash and returned to the environment. As coal-waste leachates from disposal sites come into contact with surrounding sediments, these sediments can have a pronounced effect on concentrations of dissolved trace elements in the leachate. This project was designed to measure and characterize the trace element attenuation properties of overburden sediments from Texas, Montana, and Wyoming. The project began with a previous study of pH buffering and trace element attenuation properties of North Dakota sediments. The initial study provided much essential information and insight into possible mechanisms of trace element attenuation. In addition, this initial research provided us with an established experimental protocol with which to conduct studies on pH buffering and trace element attenuation properties of near surface overburden sediments. The samples used in this study were obtained from test holes drilled to a maximum depth of 100 feet. The resulting samples were evaluated with respect to their ability to buffer pH and attenuate trace elements using the techniques developed during the North Dakota phase of the project. 37 refs., 18 figs., 24 tabs.

37218 (EC–1988, pp. 89-99) **Acid rain and agricultural production in Ontario.** Ludlow, L. (Univ. of Guelph, Guelph, ON, Canada); Smit, B. Environment Canada, Ottawa, ON (Canada). 1988. (CONF-8611291–: Perspectives on land modelling, Toronto, Canada, 17-20 Nov 1986;MICROLOG–88-06350). In *Perspectives on land modelling. Workshop proceedings.* Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

An analytical framework was developed to assess the implications of environmental change for agriculture. In this framework, the degree to which acid rain distribution patterns may change, given an alternative future acid emission scenario, and the impacts of acid rain on crop yields, are estimated. Finally, the yield response estimates are included in a land model to assess the impacts of acid rain on regional agricultural production and production potential in Ontario. The scenario identified in this paper assumes that future acid emissions will decrease such that rain across Ontario becomes unpolluted by acids. Information derived from experiments and in the field are used to estimate the yield responses of selected crops if acid pollution was eliminated. Changes in regional production are then calculated for each county in southern Ontario by applying the yield response estimates to current land-use patterns of agricultural production. The implications of acid rain for production potential are determined using a model that maximizes the proportion by which current production levels can be exceeded. Results reveal that overall impacts of acid rain are relatively small. It is estimated that the province is incurring an annual loss of about $43 million (representing about 2%) due to acid rain. Although the impacts on total production are modest, it is shown that for some crops and regions the effects are more pronounced. The study illustrates the potential of models to assess the effects of changes in environmental conditions on the use of land resources from the local to the national scale. 20 refs., 3 figs., 2 tabs.

37219 (EC/IWD–IW/L-AR-WQB-88-143) **An application of SPANS technology to toxic contaminant monitoring in the Atlantic region.** O'Neill, H.J.; Hanna, W.B. Environment Canada, Ottawa, ON (Canada). Inland Waters Directorate. 1988. 53p. (MICROLOG–88-06352). Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

Two maps for Atlantic Canada were generated through the conjugation of land use, land capability, industrial location, and demographic databases. The Potential Sources of Pesticides map illustrates the potential sources of agricultural pesticides, while the Potential Sources of Toxics maps illustrates known agricultural, industrial, and population factors. A relative scale ranging from very high to low was employed to rank contaminant potential on a regional scale. An areal analysis of this map indicates that approximately 10% of the region fell into the very high and high categories. An examination of empirical data confirms the general accuracy of this map. Of the 55 observations of toxic contaminants (polycyclic aromatic hydrocarbons, including fluoranthene, DDT, and PCB) ranked high and very high, 78% (43) are located in areas ranked high and very high on the hypothesis map. Additionally, a strong correlation between potential pesticide input and nutrient levels supports the validity of the hypothesis map. Monitoring networks for individual toxic contaminants may be enhanced by following the approach of this study. The occurrence of a toxic chemical in the environment is a function of many factors, but by converting information relevant to a specific toxin (contributing industries, soil types, etc.) into maps and conjugating the maps together via matrix overlays, accurate predictive maps may be created. 12 refs., 12 figs., 5 tabs.

37220 (ORNL–6526/R4) **Environmental Regulatory Update Table, May 1989.** Houlberg, L.M.; Langston, M.E.; Nikbakht, A.; Salk, M.S. Oak Ridge National Lab., TN (USA). Jun 1989. 100p. Sponsored by DOE Environment Health & Safety. DOE Contract AC05-84OR21400. Order Number DE89014569/JAW. Available from NTIS, PC A06/MF A01 - OSTI; GPO Dep.

Environmental Sciences Division Publication No. 3248.

The Environmental Regulatory Update Table provides information on regulatory initiatives of interest to DOE operations and contractor staff with environmental management responsibilities. The table is updated each month with information from the Federal Register and other sources, including direct contact with regulatory agencies. Each table entry provides a chronological record of the rulemaking process for that initiative with an abstract and projection of further action.

37221 (PB–89-166359/XAB) **Use of industrial-hygiene samplers for soil-gas measurement.** Kerfoot, H.B.; Mayer, C.L. Lockheed Engineering and Management Services Co., Inc., Las Vegas, NV (USA). Mar 1989. 36p. Available from NTIS, PC A03/MF A01.

This report describes a field evaluation of a passive-sampling technique for soil-gas surveying. The system uses a sampler, consisting of an industrial hygiene organic vapor monitor inside a metal-sampling manifold, buried at a depth of approximately 0.3 meters (1 foot). An absorbent sampler is buried at a shallow depth and allowed to collect VOCs from the soil atmosphere. After a set time (8 hours to several weeks), the sampler is retrieved, sealed immediately, and transported to a laboratory for analysis. Analysis

results indicate the identity and concentration of VOCs collected by the sampler. The main advantage of passive sampling lies in the simplicity of field operations, that is, field support (supplies, personnel, and equipment) is much less costly than for grab sampling, and equipment problems are virtually non-existent. The disadvantages associated with passive sampling are that results are not available for days to weeks and that deep sampling is difficult without more elaborate equipment.

37222 (PB–89-167365/XAB) **Drum centrifuge modelling of long-term pollutant migration through a soil layer.** Edwards, R.I. Cambridge Univ. (UK). Dept. of Engineering. 1988. 46p. (CUED/D-SOILS/TR–220). Available from NTIS, PC EE05/MF E05.

With the advent of the awareness of potential problems associated with land based waste-repository configurations, studies have been conducted to examine some of the site processes involved. These include the processes by which leachate pollutants migrate away from these disposal sites, with the subsequent contamination of the ground-water system. Studies employing accelerated physical modelling have been undertaken incorporating both the drum and beam centrifuge systems. These have to date been conducted over relatively short (30-100 years) prototype migration times, a drum centrifuge test was therefore conceived which by utilizing the full area of the drum wall, would allow the study of pollutant transport over a wide range of conditions.

37223 (PNL-SA–16782) **The need for control agencies to update today's conceptual basis for groundwater quality requirements and subsurface evaluation guidelines.** Nelson, R.W. Pacific Northwest Lab., Richland, WA (USA). May 1989. 11p. Sponsored by DOE Defense Programs. DOE Contract AC06-76RL01830. (CONF-890397–2: New field measurements conference, Dallas, Texas, USA, 20 Mar 1989). Order Number DE89014453/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper proposes that: (1) the implicit assumptions forming the conceptual basis of today's subsurface water quality control requirements and evaluation guidelines are too simple, (2) such unrealistic simplicity means the present conceptual basis is incomplete, (3) the bottom-line result is incomplete, which leads to poor quality technical evaluations. Also, because of the simplified and incomplete conceptual basis, there are a continuing proliferation of control regulations and an ever growing stream of more complicated guidelines. Each guideline inacted to clarify the earlier flawed position. Such a Band-Aid over Band-Aid upon Band-Aid approach for covering the incomplete and too simplistic basis is doomed from the outset. The real solution lies in changing the incomplete basis and starting afresh with realistic regulations and key meaningful fundamental technical guidelines. 2 refs.

5103 Radioactive Materials Monitoring and Transport

37224 (AERE-R–12978) **Sorption of radionuclides on London clay.** Berry, J.A.; Bourke, P.J.; Green, A.; Littleboy, A.K. UKAEA Harwell Lab. (UK). Chemistry Div. Feb 1989. 36p. Available from H.M. Stationery Office, London, price Pound 10.00.

Techniques for studying the sorption of radionuclides on London clay have been investigated. This work involved the use of through-diffusion, in-diffusion, high-pressure convection and batch methods to study the sorption of iodide, strontium, caesium and americium. Through-diffusion and high-pressure convection methods were found to be most useful for investigating weakly and moderately sorbing nuclides and give realistic values for sorptivity. The batch technique remains the most practical method of obtaining large quantities of data within a relatively short timescale but gives very high sorptivity values. It is however very useful for intercomparisons of nuclides or geological media. The in-diffusion method requires further refinement for use with strongly sorbing nuclides. Good agreement between through-diffusion and high-pressure convection methods was obtained for the sorptivity of strontium, whilst trends observed for caesium by through-diffusion were confirmed by batch measurements.

37225 (CFFTP-G–87004) **Field studies of HT oxidation and dispersion in the environment. I. The 1986 August experiment at Chalk River.** Brown, R.M.; Ogram, G.L.; Spencer, F.S. Canadian Fusion Fuels Technology Project, Toronto, ON (Canada). Jan 1987. 81p. Order Number DE89619866/JAW. Available from NTIS (US Sales Only), PC A05/MF A01 - OSTI; INIS.

The environmental dispersion and oxidation of a controlled atmospheric release of tritiated hydrogen (HT) was studied in a pilot-scale field experiment. This study was designed to test procedures and obtain preliminary results for planning a more intensive experiment to determine the environmental behaviour of HT with emphasis on the processes leading to the appearance of HTO in the atmosphere, ie., conversion, deposition and resuspension. Field observations led to the following conclusions: (1) no evidence was found for the rapid conversion of HT to HTO in the atmosphere, (2) observations support the hypothesis that the dominant process giving rise to the observed HTO in air was HT oxidation in the soil by microbial action followed by resuspension of HTO, (3) HT deposition velocities to soil ranged between 0.041 cm/s and 0.13 cm/s, consistent with previous chamber measurements, (4) the rate of HTO loss from soil, averaged over 21 days, was less than 1% per hour, and (5) vegetation HTO concentrations initially increased with time then by 48 hours decreased exponentially at a rate similar to soils. These results will be validated and extended by the intensive experiment scheduled for June, 1987.

37226 (CONF-890207–34) **Implementation of an integrated CERCLA-NEPA environmental process at a FUSRAP site.** Devgun, J.S.; Beskid, N.J.; Robertson, R.C.; Atkin, R.G. Argonne National Lab., IL (USA). 1989. 11p. Sponsored by DOE Environment Health & Safety. DOE Contract W-31109-ENG-38. From Waste management '89; Tucson, Arizona, USA; 26 Feb - 2 mar 1989. Order Number DE89013650/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980 and its amendment in 1986 through the Superfund Amendments and Reauthorization Act (SARA) have significantly affected the environmental compliance process. Remedial actions at contaminated sites now must satisfy the requirements of not only the National Environmental Policy Act (NEPA) but also CERCLA, as amended. For planning and conducting remedial actions under the Formerly Utilized Sites Remedial Action Program (FUSRAP), the US Department of Energy has developed and implemented an integrated process aimed at satisfying the requirements of both NEPA and CERCLA, as amended. The integrated approach involves a single, comprehensive environmental process that results in a single set of documentation. The process is streamlined, efficient, and cost effective and it minimizes confusion to the public. This paper discusses the need for, and the elements of, the integrated process as applied to FUSRAP sites. The implementation of the process is illustrated through a case study of FUSRAP sites in Tonawanda, New York. 5 figs.

37227 (DOE/OR/21400–T371) **Impacts of DOE Order 5820.2A on Oak Ridge National Laboratory.** Robinson, S.M. Oak Ridge National Lab., TN (USA). 1989. 12p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89010175/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The Department of Energy (DOE) is responsible for promulgating regulations, guidelines, and performance standards relative to the operations of DOE facilities. DOE establishes orders and guidelines for the conduct of operations at contractor-operated sites which manage radioactive, hazardous, and mixed waste. These sites are regulated through DOE Orders which are written, implemented, and enforced through DOE Headquarters in Washington, DC. In addition, DOE sets the policy for complying with applicable public laws. Waste management activities in general have been subjected to increased scrutiny over the past eight years. Federal and state laws and regulations covering all aspects of hazardous and radioactive waste management have been promulgated. As state and federal regulations have become increasingly strict, DOE sites have been exempt from the restrictions imposed on their neighboring industrial plants. In addition, the news media has begun to focus on DOE's past waste management practices which have led to environmental

contamination problems at various sites throughout the United States. As a result, DOE has received criticism for the manner in which it regulates its own waste and environmental management activities. Meanwhile, technical advancements have been made to allow more effective waste treatment and isolation from the environment. These criticisms and technical advancements have prompted DOE to pass several new orders containing much stricter requirements for waste handling, treatment, and disposal.

37228 (NUREG–0837-Vol.9-No.1) **NRC TLD [thermoluminescent dosimeter] Direct Radiation Monitoring Network: Progress report, January–March 1989.** Struckmeyer, R.; McNamara, N. Nuclear Regulatory Commission, King of Prussia, PA (USA). Region I. Jun 1989. 222p. Sponsored by Nuclear Regulatory Commission. Available from NTIS, PC A10/MF A01 - GPO - OSTI.

The US Nuclear Regulatory Commission (NRC) Direct Radiation Monitoring Network is operated by the NRC in cooperation with participating states to provide continuous measurement of the ambient radiation levels around licensed NRC facilities, primarily power reactors. Ambient radiation levels result from naturally occurring radionuclides present in the soil, cosmic radiation constantly bombarding the earth from outer space, and the contribution, if any, from the monitored facilities and other man-made sources. The Network is intended to measure radiation levels during routine facility operations and to establish background radiation levels used to assess the radiological impact of an unusual condition, such as an accident. This report presents the radiation levels measured around all facilities in the Network for the first quarter of 1989. A complete listing of the site facilities monitored is included. In some instances, two power reactor facilities are monitored by the same set of dosimeters. All radiation measurements are made using small, passive detectors called thermoluminescent dosimeters (TLDs), which provide a quantitative measurement of the radiation levels in the area in which they are placed. Each site is monitored by arranging approximately 40 to 50 TLD stations in two concentric rings extending to about five miles from the facility. All TLD stations are outside the site boundary of the facility.

37229 (TVA/PUB–88/19) **Annual radiological environmental monitoring report, Watts Bar Nuclear Plant.** Tennessee Valley Authority, Chattanooga, TN (USA). Radiological Control. May 1988. 117p. Sponsored by Tennessee Valley Authority. Order Number DE89014206/JAW. Available from NTIS, PC A06/MF A01 - OSTI.

This report describes the preoperational environmental radiological monitoring program conducted by TVA in the vicinity of the Watts Bar Nuclear Plant (WBN) in 1988. The program includes the collection of samples from the environment and the determination of the concentrations of radioactive materials in the samples. Samples are taken from stations in the general area of the plant and from areas that will not be influenced by plant operations. Station locations are selected after careful consideration of the weather patterns and projected radiation doses to the various areas around the plant. Material sampled includes air, water, milk, foods, vegetation, soil, fish, sediment, and direct radiation levels. During plant operations, results from stations near the plant will be compared with concentrations from control stations and with preoperational measurements to determine potential impacts to the public. The exposures calculated from environmental samples were contributed by naturally occurring radioactive materials, from materials commonly found in the environment as a result of atmospheric fallout, or from the operation of other nuclear facilities in the area. Since WBN has not operated, there has been no contribution of radioactivity from the plant to the environment. 4 refs., 2 figs., 1 tab.

37230 (TVA/PUB–88/20) **Annual radiological environmental operating report, Sequoyah Nuclear Plant, 1988.** Tennessee Valley Authority, Chattanooga, TN (USA). Radiological Control. Apr 1989. 114p. Sponsored by Tennessee Valley Authority. Order Number DE89014207/JAW. Available from NTIS, PC A06/MF A01 - OSTI.

This report describes the environmental radiological monitoring program conducted by TVA in the vicinity of the Sequoyah Nuclear Plant in 1988. The program includes the collection of samples from the environment and the determination of the concentrations of radioactive materials in the samples. Samples are taken from stations in the general area of the plant and from areas not influenced by plant operations. Station locations are selected after careful consideration of the weather patterns and projected radiation doses to the various areas around the plant. Material sampled includes air, water, milk, foods, vegetation, soil, fish, sediment, and direct radiation levels. Results from stations near the plant are compared with concentrations from control stations and with preoperational measurements to determine potential impacts of plant operations. The vast majority of the exposures calculated from environmental samples were contributed by naturally occurring radioactive materials or from materials commonly found in the environment as a result of atmospheric nuclear weapons fallout. Small amounts of Co-60 were found in sediment samples downstream from the plant. This activity in stream sediment would result in no measurable increase over background in the dose to the general public. 4 refs., 2 figs., 2 tabs.

37231 (TVA/PUB–88/21) **Annual radiological environmental operating report, Browns Ferry Nuclear Plant, 1988.** Tennessee Valley Authority, Chattanooga, TN (USA). Radiological Control. Apr 1989. 126p. Sponsored by Tennessee Valley Authority. Order Number DE89014208/JAW. Available from NTIS, PC A07/MF A01 - OSTI.

This report describes the environmental radiological monitoring program conducted by TVA in the vicinity of Browns Ferry Nuclear Plant in 1988. The program includes the collection of samples from the environment and the determination of the concentrations of radioactive materials in the samples. Samples are taken from stations in the general area of the plant and from areas not influenced by plant operations. Station locations are selected after careful consideration of the weather patterns and projected radiation doses to the various areas around the plant. Material sampled includes air, water, milk, foods, vegetation, soil, fish, sediment, and direct radiation levels. Results from stations near the plant are compared with concentrations from control stations and with preoperational measurements to determine potential impacts of plant operations. The vast majority of the exposures calculated from environmental samples were contributed by naturally occurring radioactive materials or from materials commonly found in the environment as a result of atmospheric nuclear weapons fallout. Small amounts of Co-60 were found in sediment samples downstream from the plant. This activity in stream sediment would result in no measurable increase over background in the dose to the general public. 3 refs., 2 figs., 2 tabs.

37232 (TVA/PUB–88/22) **Environmental radioactivity levels Bellefonte Nuclear Plant: Annual report, 1988.** Tennessee Valley Authority, Chattanooga, TN (USA). Radiological Control. [1989]. 31p. Sponsored by Tennessee Valley Authority. Order Number DE89014209/JAW. Available from NTIS, PC A03/MF A01 - OSTI.

The Bellefonte Nuclear Plant (BLN), being constructed by the Tennessee Valley Authority (TVA), is located in Jackson County, Alabama, on a peninsula bounded on the west by Town Creek embayment and on the east by Guntersville Reservoir at Tennessee River Mile (TRM) 391.5. The site is approximately 6 miles (10 kilometers) northeast of Scottsboro, Alabama. The plant will consist of two pressurized water reactors; each unit is rated at 3620 MWt and 1271 MWe. Fuel load in Unit 1 has not been scheduled. A preoperational environmental radiological monitoring program was implemented in August 1978 and continued through 1983. This program had the objective of establishing a baseline of data on the distribution of natural and manmade radioactivity in the environment near the plant site. Because of the extended delay in fuel loading, the sampling program was substantially reduced for 1984, 1985, and 1986. This reduced program was discontinued in the fall of 1988. The full preoperational sampling program will be restarted approximately 1 year prior to fuel loading. This report presents the results obtained from the program conducted during 1988. 16 figs., 10 tabs.

37233 Absorption, distribution, and fate of neptunium in plants. Cataldo, D.A. (Pacific Northwest Laboratory, Richland, WA (USA)); Garland, T.R.; Wildung, R.E. *Journal of Agricultural and Food Chemistry (USA)*, 36(3): 657-662 (May-Jun 1988). DOE Contract AC06-76RL01830.

Soil-plant concentration ratios (CR) for neptunium (Np) in bushbean, measured over the range of 5.2×10^{-7} to 4.1 mg of Np/g of soil, are approximately 2 at soil concentrations below 4×10^{-4} mg/

g and increase to 12 at higher soil levels. The CR values determined for soybean, bushbean, barley, and alfalfa range from 0.5 to 4 at a soil concentration of 2.6×10^{-6} mg/g. Root absorption by soybean seedlings of Np from solutions containing 7×10^{-7} to 473 mg of Np(V)/mL is generally proportional to concentration but exhibits some saturation in root absorption at higher concentrations. Seed concentrations in bushbean and wheat are a factor of 10 lower than vegetative tissues. Neptunium is transported within the plant in organic complexes containing one or more organic acid residues. Fractionation of plant tissues indicates that Np is substantially more soluble than plutonium, especially in seeds, with approximately 50% of the soluble Np in roots and leaves associated with plant ligands of less than 5000 molecular weight.

37234 (EC/NHR/S–88016) **NOGAP C-11A. Sediment regime of lakes in the Mackenzie Delta.** Marsh, P.; Ferguson, M. Environment Canada, Saskatoon, SK (Canada). National Hydrology Research Inst. 1988. 71p. (MICROLOG–88-06252). Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

During the summer of 1987, detailed hydrologic and sedimentation measurements were made on three lakes in the Mackenzie Delta near Inuvik. Due to the importance of sediments in carrying adsorbed hydrocarbon contaminants, this work on the spatial and temporal patterns of sediment deposition under different flow conditions improves the ability to predict and evaluate environmental impacts of hydrocarbon development in the Mackenzie Basin. This work illustrates the large variations in regimes found in typical lakes. Sedimentation decreases with increasing lake sill elevation and distance from the main channels. For example, the mean sedimentation rates ranged from 1.3 mm for the lowest sill elevation lake to only .02 mm for the highest lake. Large spatial and temporal variations in this sediment input were found. At one lake, 67% of all sediment was input during the brief spring flood period, and 53% of all sediment was deposited in only 6% of the lake area. Using these sedimentation data and published values of hydrocarbons adsorbed onto the suspended sediments in East Channel at Inuvik, the input of hydrocarbons into NRC, Skidoo, and South Lakes was estimated as 2,363, and 620 g or 25,961, and 996 $\mu g/m^2$, respectively, during 1987. General remarks can be made concerning the input of hydrocarbon contaminants due to accidental spills. With a knowledge of the water level during a spill, the total number and area of lakes affected could be estimated and using the data on spatial variation of sedimentation, so can the lake areas most affected. This type of information has important implications for predicting the effect of hydrocarbon development on the lakes in the Mackenzie Delta. 34 refs., 25 figs., 3 tabs.

37235 (MNR/FB–88-04) **Summary of phytoplankton data for the Nelson River and Rat-Burntwood lakes, 1987.** Livingston, L. Manitoba Dept. of Natural Resources, Winnipeg, MB (Canada). Fisheries Branch. 1988. 170p. (MICROLOG–89-00714). Available from Manitoba. Manitoba Natural Resources, Public Information Services, 1495 St. James St., PO Box 22, Winnipeg, MB, Canada R3H 0W9; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

This study was initiated to provide background data for assessing the impact of the Churchill River (Manitoba) hydrolelectric project diversion on the first ecology of northern Manitoba lakes. During the 1987 field season, phytoplankton samples were collected from Cross, Rat, Sipiwesk, Split, Stephens and Threepoint lakes. The phytoplankton were identified to species and biomass was calculated. In this report the emphasis was placed on identifications to genera and the occurrence of the major algal species. In the 1987 samples, with exception of Cross Lake, the dominant taxomomic order was Diatomeae. The secondary order was Cyanophyceae or Cryptophyceae. For Cross Lake, the dominant taxonomic order was Diatomeae. The secondary order was Cyanophyceae or Cryptophyceae. For Cross Lake, Cyanophyceae was the dominant order, while Diatomeae and Chlorophyceae were the secondary orders. The dominant genera for the lakes were one or a combination of Melosira, Anabaena, Pediastrum, or Rhodomonas. Compared to the 1986 phytoplantkton data, there was an increase in diversity of genera for each order. 1 ref., 7 figs., 6 tabs.

37236 (NEI-NO–82, pp. 57-68) **Hydrologic system characterisation for biogeochemical process research in forest ecosystems.** Bouten, W. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Hydrologic system characterisation is of utmost importance in biogeochemical process research. This is amplified in the first part of this paper. Within the framework of the Dutch Priority Program on Acidification, a hydrologic study supports microbiological, soil chemical and plant physiological research. This paper describes how a calibrated hydrologic numerical simulation model is used to perform sensitivity analysis with respect to water fluxes and moisture conditions within a forested catchment. First of all, the effect of errors in the determination of soil physical properties, secondly the effect of the vertical root distribution and thirdly the effects of rainfall by the canopy and the forest floor are investigated. Conclusions are drawn on the necessity of model extension and adjustment of the field monitoring programs. 2 figures, 1 table, 25 references.

37237 (NEI-NO–82, pp. 117-126) **Oxygen isotopic composition of sulphates in the uplandforest of the plastic lake watershed.** Stempvoort, D.R. van; Fritz, P.; Drimmie, R.J.; Wills, J.J. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

The upland soil water sulphate in the watershed has a distinct oxygen isotopic composition (avg. $\delta^{18}O$=5.67 0/00) relative to local precipitation sulphate (avg. $\delta^{18}O$=11.65 0/00). This is explained by chemical/bioloical reactions in the soil and/or overlying forest canopy. Throughfall and stemflow samples indicate that, at most, a very small shift (avg. 0 to 2 0/00 $\delta^{18}O$) takes place in the aboveground vegetation. SO-2 absorption to the soil, snow, or vegetation may be an important process, but preliminary data indicate no significant associated isotopic shift. Sulphate adsorption by Fe and Al oxyhydroxides in the B horizon also has a minor effect on soil water sulphate oxygen composition. Microbial mineralization of organic sulphur produces secondary sulphate and this soil process is probably the major cause of the observed isotope shift. 2 figures, 1 table, 28 references.

37238 (NEI-NO–82, pp. 127-137) **Quality of surface water evolution during snowmelt. International symposium on acidification and water pathways.** Gabriela, B.; Dusan, B. Norsk Hydrologisk Komite, Oslo (Norway). 1987. In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

The paper deals with the quality of surface water evolution during snowmelt. The results were achieved in study of snowpack and streamwater chemistry in mountainous drainage basin Bystrianka (Low Tatra mountains) in Czechoslovakia. Used data are obtained from regular measurements in the winter seasons 1984/85, 1985/86. Accumulation and evolution of sulphate levels in the both snow and

stream are evaluated during the snow accumulation and melting. The results of our observations according to the successive washout of mentioned solutes during snowmelt indicate remarcable impact on the ecosystem from acid precipitation, witch is similar to observations in northern countries. 2 figures, 3 tables, 12 references.

37239 (NEI-NO–82, pp. 185-194) **Conceptual model for analysing soil and groundwater acidification on regional scale. International symposium on acidification and water pathways.** Vries, W. de. Norsk Hydrologisk Komite, Oslo (Norway). 1987. In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

This paper presents the interim status of a simulation model for analysing long-term responses of soil and groundwater quality to acid deposition. It will be linked as a submodel in an overall framework predicting environmental impacts from energy emissions. The acidification process is conceptualized as a disturbance in (forest) element cycling. Consequently, the model utilizes (relatively simple) mechanistic descriptons of all relevant bio- and geochemical processes affecting the nutrient cycles, such as fliar uptake, foliar exudation, litterfall, root turnover, (net) mineralization, weathering, and root uptake. The model is meant to predict yearly averaged fluxes and concentrations of major ions (H, Al, Ca, Mg, NH-4, NO-3, SO-4, Cl, RCOO) in characteristic forest-soil ecosystems in the Netherlands. Preliminary show reasonable agreement with data on ion concentration near the phreatic surface. 1 figure, 2 tables.

37240 (NEI-NO–82, pp. 101-105) **Processes affectin the chemistry of waters passing through a high elevator Sierra Nevada watershed.** Nodvin, S.C. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

The Eastern Brook Lakes watershed is located in the Sierra Nevada Mountains of California and spans and elevational range from 3060 to 3780 m. Changes in stream and lake chemistries along spatial and temporal flowpaths demonstrate that both terrestrial and aquatic processes were important in regulating surface water chemistries within the 250 ha watershed. Streams generally showed increasing pH, alkalinity, and conductance values with decreasing elevation. Large changes in stream chemistries occurred over short distances at locations such as alpine meadows. During the spring, stream alkalinities and conductance values decreased while stream pH values increased with time. pH values reached their maximim in June when alkalinity and conductance values were at their minimum values. Internal lake processes strongly influenced the chemistry of Upper Eastern Brook Lake. During spring and summer, lake waters exhibited near-neutral pH, low conductance (10-12 μS/cm), low alkalinity (100-120 μEq/L), and undetectable ammonium. Under the ice, major changes in lake chemistry occurred associated with oxygen depletion in the hypolimnion. pH values decreased with time towards a minimum of 6.3 at 6 m depth. Other parameters increased w time and depth under the ice, reaching maximum values as follows: conductance > 80 $\mu S/cm^{-1}$ Gran's alkalinity > 370 $\mu Eq/L^{-1}$, and ammonium > 50 $^{m}u^{E}q/L^{-1}$. 5 figures, 10 references.

37241 (NEI-NO–82, pp. 195-205) **Effects of air pollutants on groundwater quality in the Federal Republic of Germany.** Wieting, J. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

The deposition of acid-forming air pollutants has resulted in qualitative and quantitative changes in the exchange of organic and inorganic substances between water and the surrounding media, and has led to substantial damage to biological systems. The capacity of the soil to function as a sink for pollutants is already exhausted in certain areas, and acid is being released suddenly from the soil. Groundwater and surface waters are in turn being biologically and chemically affected by this release of acid (free ion passage). With the continued acidifi- cation of soils and the transport of acid the soil profile, the endangerment of groundwater and surface waters in most areas is now a question of B'whenBB and not BBifB' . In light or this question, the first estimates for the amount of acid deposition, the buffering capacity of soils, the mobilization of heavy metals, and the degree and extent of groundwater acidification with regard to drinking water supplies have been made for the Federal Republic of Germany (FGR). 3 figures, 2 tables, 10 references.

37242 (NEI-NO–82, pp. 223-235) **Acidity of surface water in Norway.** Rosenqvist, J.T. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

The paper deals with acidity of surface water together with the ecological impact of acid precipitation in Norway. 5 figures, 18 references.

37243 (NEI-NO–82, pp. 259-268) **Increased acidity and aluminium concentration in streams following afforestation: Causative mechanisms and processes.** Hornung, M.; Reynolds, B.; Stevens, P.A.; Neal, C. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

On certain site types in the UK uplands, streams draining for coniferous plantations are more acid and contain higher concentraions of aluminium than moorland streams. The characteristics of the affected site types are outlined. The changes in processes resulting from afforestation, and which wolud produce the detected differences in streamwater chemistry are discussed using examples from 3 catchment studies in Wales. Changes in site hydrology alone are unlikely to explain the differences in streamwater chemistry, changes in the chemistry of th inputs to the streams are also required. Increased capture, and concentration, of atmospherically derived ions, particulary mobile strong-acid anions, on the forest canopy provides the main driving mechanism changing the chemistry of inputs to the stream. 5 tables, 22 references.

37244 (NEI-NO–82, pp. 249-363) **Loch Fleet Project.** Brown, D.J.A.; Howells, G.D.; Paterson, K. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

The background to the Loch Fleet Project, an acid-lake restoration research project, is described together with the initial chemical changes which resulted from the first set of lime application to the catchment in the spring of 1986. These changes are encouraging with increases in pH and calcium concentration and decreases in toxic aluminium cocentration having been observed in the surface waters draining treated subcatchments and in loch outlet. Also, the normal tendency for pH and calcium concentration to fall during times of increased flow has been reversed. 9 figures, 2 references.

37245 (NEI-NO–82, pp. 237-248) **Event studies and the interpretation of water quality in forested basin.** Keller, H.M.; Kloeti, P.; Froster, F. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

A longterm monitoring project, to observe streamflow and its quality in small forested basin in Switzerland was started in 1967. The

basins were monitored continuously for streamflow, and dissolevd nutrients were analysed in regularly taken grabsamples. More recently also precipitation chemistry (rain and snow) has been monitored to estimate dissolved soils input from the atmosphere and 3 basins been equiped with continuous flow proportional samplers This study shows the changes of concentration and loadings of nutrients in precipitation, throughfall, soil water and streamflo of 3 small catchments. Special emphasis is put on the results obtained in study on the effect of the forest canopy on precipitation chemistry. 6 figures, 2 tables, 10 references.

37246 (NEI-NO–82, pp. 325-348) **Mitigation studies.** Johannessen, M.; Hindar, A. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Mitigation research aims at obtaining information on: Advantages and limitaions of various neutralizing agents; treatment technics for lakes, river, and brooks; dose-response relationships and models; realistic goals and strategies for each project; pratical and economic realistic strategies;ecological effects of treatments on ecosystems. In addition the research programmes have given information of how ecosystems respond to stress factors such as pollutants, how different species might dominate the acidified system, and how and to what extent recolonization occurs after treatment. The research is also closely linked to acidification research as the reacidification process has been studied closely. There is a need for longterm studies connected to the ongoing liming programmens. The biologic responses on over the long term and after repeated liming treatment are still not known. Even though deleterious effects have not been observed over the short term, a question mark is put on long-term effects. The paper focuses on results from liming activities in Norway with emphasis on liming strategies and dose-response nelationships. 16 figures, 14 references.

37247 (NEI-NO–82, pp. 365-374) **Liming as a method to neutralize highly acidic drainage waters from sulphate basins in western Finland.** Bjoerkqvist, D.; Weppling. K. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Land upheaval in combination with drainage projects and flood control works cause serious acidity problems in many rivers and estuaries along the Ostrobothnian coast. Sulphide-rich sediments from the former Litorina Sea are oxidized, with a subsequent leaching of sulphates and potentially toxic soil metals into the watercourses. Extremely low pH-values (3-4) and high metal con- centrations (e.g. a total Al maximum of 80 mg/1) have been measured, leading to occasional fish deaths and severe distrubance in fish reproduction. Liming as a countermeasure was studied experimentally in 1985. Very high doses of $CaCO_3$ (200-1000 g/m3) were needed to raise the pH-value to acceptable levels, compared to the amounts needed for neutralizing waters affected by acid deposition. The elevated pH level (pH 6-7) led to a rapid precipition of Al and Fe from the water. A significantly improved survival rate was recorded for the test organisms used (roach, Rutilus and perch, Perca fluviatilis) immediately after liming, stressing the importance of high Ca-concentrations in reducing the detrimental effects of toxic metals. 5 figures, 1 table, 13 references.

37248 (SKI–86035) **Influence of spatial discretization in 3D groundwater flow calculations using the finite-element method.** Nedbal, T. Swedish Nuclear Power Inspectorate, Stockholm (Sweden). 24 Feb 1988. 14p. (KEMAKTA-AR–88-07). Order Number DE89618368/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The SKI has from the Atomic Energy Research Establishment (AERE) at Harwell, U.K., acquired the computer model NAMMU for groundwater hydrology calculations. This code was first implemented on an AMDAHL 470, an IBM compatible computer, and then modified to get integrated with HYPAC which is a program package for pre- and postprocessing finite element data, development by KEMAKTA Consultants Co. The NAMMU code was then transferred to a CYBER 205 by Control Data AB. This report describes the implementation of HYPAC on CYBER 205, enhancement of NAMMU performance on CYBER 205 and a study of the influence of spatial discretization on groundwater flow calculations.

37249 (TR-EL–82-4/82(11.100)) **Species profiles: Life histories and environmental requirements of coastal fishes and invertebrates (Mid-Atlantic): Blue crab.** Hill, J.; Fowler, D.L.; Van Den Avyle, M.J. Army Engineer Waterways Experiment Station, Vicksburg, MS (USA); Fish and Wildlife Service, Washington, DC (USA); Georgia Univ., Athens, GA (USA). Georgia Cooperative Fish and Wildlife Research Unit. Mar 1989. 20p. (BR–82(11.100)). Available from OSTI - U.S. Fish and Wildlife Service, NASA-Slidell Computer Complex, 1010 Gause Boulevard, Slidell, LA 70458.

Species profiles are summaries of the literature on taxonomy, life history, and environmental requirements of coastal fishes and aquatic invertebrates. They are prepared to assist with impact assessment. The blue crab, Callinectes sapidus, occurs in lower reaches of freshwater rivers, estuaries, and coastal waters along the Atlantic seaboard and Gulf of Mexico, and the species supports the largest crab fishery in the United States. Chesapeake Bay provides the greatest production of blue crabs on the east coast. The blue crab's high abundance in estuaries, diverse feeding habits, and importance as prey for other marine animals indicate its important role in the structure and function of estuarine communities. Female blue crabs spawn in high-salinity lower estuaries of coastal areas; the resulting larvae are planktonic and develop into juveniles at 5 to 10 weeks of age. Juveniles gradually migrate into shallower, less-saline upper estuaries and rivers where they grow and mature at 1-2 yr of age. Mating occurs in the upper estuaries after which females migrate to areas having higher salinities. Growth and survival of blue crabs are strongly affected by water temperature and salinity, but tolerances vary with life stage. Larvae require temperatures of 20-30°C and salinities of 10-30 ppt for proper development, but salinity and temperature tolerances are broad for advanced juveniles and adults. Blue crabs use nearly all areas within estuaries as nursery habitat, and crab populations are sensitive to changes in physical features of contamination of these areas. 94 refs., 4 figs., 2 tabs.

37250 Effects of structure on scattering from marine organisms. Quinby-Hunt, M.S. (Marine Sciences Group, and Applied Science Div., Lawrence Berkeley Univ. of California, Berkeley (US)); Hunt, A.J. v.v of Ocean optics IX. Blizard, M.A. SPIE Society of Photo-Optical Instrumentation Engineers, Bellingham, WA (1988). (CONF-880410–: Ocean optics 9, Orlando, FL, USA, 4-6 Apr 1988).

Microscopic particulates (organisms and non-living components) in the ocean are responsible for the largest and most variable component of oceanic scattering. Marine scattering is dominated by small unicellular populations that are the most effective organisms per unit mass for scattering and absorption. Most unicellular organisms important for scattering can be identified as members of groups that are selfsimilar (that is, they have the same structure) and can be described in terms of simple geometric forms or combinations thereof. Thus the light scattering characteristics of prevalent marine populations may be predicted by applying particular scattering theories. This is a complementary approach to current methodologies for the prediction and interpretation of the radiative transport properties of the ocean. To better predict realistic scattering from marine organisms, structural models for small unicellular oceanic organisms are being implemented. For a few special geometries (spherical symmetries, infinite cylinders), rigorous calculations can be performed for unrestricted size and optical properties. Models based on the Rayleigh-Debye approximation allow many more shapes but are only valid for a restricted range of sizes and optical properties.

37251 Immobilization of unicellular marine organisms for optical characterization. Lofttus, K. (Applied Science Div., Lawrence Berkeley Lab. (US)); Hunt, A.J.; Livolant, F.; Maestre, M.F. v.v of Ocean optics IX. Blizard, M.A. SPIE Society of Photo-Optical Instrumentation Engineers, Bellingham, WA (1988). (CONF-880410–: Ocean optics 9, Orlando, FL, USA, 4-6 Apr 1988).

A new method has been developed to study the light scattering properties of single, immobilized unicellular marine organisms. Cells

of the dinoflagellate Prorocentrum micans were fixed and immobilized by mixing them into a solution that formed a transparent gel. The residual Rayleigh scattering caused by the gel was effectively eliminated by substituting a second liquid into the gel to match the index of refraction of the gel network, thereby producing a transparent support medium. Scattering measurements of the elements of the Mueller matrix were performed on a single Prorocentrum micans cell using a polarization-modulation scanning nephelometer. The angular dependence of S_{11} and normalized S_{12}, S_{22}, S_{33}, S_{34}, S_{13}, and S_{14} are presented. The structure in all elements is very rich, cell orientation dependent, and completely reproducible. The measurements also revealed significantly non-zero values for all 16 elements of the scattering matrix and the non-equivalence of cross-diagonal elements. A striking feature of the measurements is the large peak values of S_{14} for a single immobilized cell. In recent years S_{14} has generally been reported to be zero for sea water and very small for laboratory systems.

37252 **Microbial colonization on natural and artificial macrophytes in a phosphorus-limited, hardwater lake.** Burkholder, J.M. (Michigan State Univ., Hickory Corners (USA)); Wetzel, R.G. *Journal of Phycology (USA),* 25(1): 55-65 (Mar 1989).

Epiphyte communities in a phosphorus-limited hardwater lake were compared over a 14-week period from Potamogeton illinoensis and structurally similar artificial plants of different leaf ages. Artificial plants were serially incubated in the lake to simulate the age of natural leaves. The physiognomy of loosely attached epiphytes appeared similar on the two substrata. Algal cell number and biovolume were 15-fold and 17-fold higher, respectively, on artificial leaves early in the growing season, but total algal density gradually became similar on natural and artificial plants. In contrast, the taxonomic composition of loosely attached algae became increasingly distinct, and mean cell biovolume on natural leaves was twice that on artificial leaves. Adnate epiphytes on both substrata developed from sparse populations of bacteria on new leaves to a community of diatoms, blue-green algae and numerous bacteria on mature and senescent leaves. Adnate community succession on natural leaves in late senescence/death differed from that on artificial leaves colonized for comparable periods in having (1) a marked increase in filamentous blue-green algae, (2) a subsequent decrease in all algae, and (3) a final fungi-dominated stage. The trends in colonization indicate that macrophytes in this oligotrophic lake provided a distinct habitat from that of artificial substrate for epiphytes throughout the growing season.

37253 **Photoadaptation and the package effect in Dunaliella tertiolecta (Chlorophyceae).** Berner, T. (Bar Ilan Univ., Ramat Gan (Israel)); Dubinsky, Z.; Wyman, K.; Falkowski, P.G. *Journal of Phycology (USA),* 25(1): 70-78 (Mar 1989).

In the marine unicellular chlorophyte, Dunaliella tertiolecta Butcher, the spectrally averaged in vivo absorption cross section, normalized to chlorophyll a (so-called a* values), vary two-fold in response to changes in growth irradiance. The authors used a kinetic approach to examine the specific factors which account for these changes in optical properties as cells photoadapt. Using Triton X-100 to solubilize membranes, they were able to differentiate between package effects and pigmentation effects. Their analyses suggest that 43-49% of the variability in a* is due to changes in pigmentation, whereas 51-57% is due to the package effect. Further analyses revealed that changes in cell size did not significantly affect packaging, while thylakoid stacking and the transparency of thylakoid membranes were important factors. Their results suggest that thylakoid membrane protein/lipid ratios change during photoadaptation, and these changes influence the effective rate of light harvesting per unit chlorophyll a.

37254 **Distribution, abundance, and transport of larval sciaenids collected during winter and early spring from the continental shelf waters off west Louisiana.** Cowan, J.H. Jr. (Louisiana State Univ., Baton Rouge (USA)); Shaw, R.F. *Fishery Bulletin (USA),* 86(1): 129-142 (Jan 1988).

The larvae of six species of Sciaenidae were collected in continental shelf waters off west Louisiana on five midmonthly ichthyoplankton cruises from December 1981 to April 1982. Ranked in order of abundance these species were sand sea trout, Cynoscion arenarius; Atlantic croacker, Micropogonias undulatus; spot, Leiostomus xanthurus; black drum, Pogonias cromis; southern kingfish, Menticirrhus americanus; and banded drum, Larimus fasciatus. Total larva density was highest in April, and the high densities were associated with the coastal boundary layer, a horizontal density front caused by an intrusion of fresher water onto the inner shelf that probably issued from the Atchafalaya River east of the study area. Spawning by sand sea trout began in January, two months earlier than previously reported, and first occurred offshore of midshelf but moved shoreward as the season progressed. Analysis of length-frequency data suggest that spot probably began to spawn in November, one month earlier than once thought. Both sand sea trout and Atlantic croaker larvae were captured at higher rates at night than during the daytime. Sand sea trout larvae appear to be somewhat surface oriented while spot may undergo vertical migration. Interpretation of the sciaenid data support a previously developed transport hypothesis involving gulf menhaden larvae and west-northwest alongshore advection within and just outside of a horizontally stratified coastal boundary layer.

37255 (DP-MS–88-185) **Managing data from a large-scale groundwater monitoring program.** Lorenz, R.; Fay, W.; Killeen, T.; Sims, W.R. Westinghouse Savannah River Co., Aiken, SC (USA). 1989. 14p. Sponsored by DOE Defense Programs. DOE Contract AC09-89SR18035. (CONF-8906138–1: International symposium on the design of water quality information systems, Fort Collins, Colorado, USA, 7-9 Jun 1989). Order Number DE89013710/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The purpose of the paper is to describe how the SRS groundwater data management system is used to verify, manipulate, and store groundwater data and how it is used to fulfill regulatory requirements. This paper will describe the development of the M-Area groundwater data management program and will focus on how well, field and analytical data from this program are managed. 7 figs.

37256 (EC/IWD–7) **Proceedings of the technology transfer workshop [for] northern water quality monitoring.** Environment Canada, Ottawa, ON (Canada). Inland Waters Directorate. 1988. 161p. (CONF-8705380–: Technology transfer workshop [for] northern water quality monitoring, Yellowknife, Canada, 4-7 May 1987;MICROLOG–88-06242). Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

A workshop was held for leading experts in northern aquatic ecology to present research results on techniques of water quality monitoring and their application in the Yukon and the Northwest Territories. Presentations and discussions were made in the areas of water quality information needs, monitoring activities in the North being conducted by various agencies, water quality research projects in specific geographical areas, and water quality impacts from mining and from hydrocarbon-related activites. This report includes summaries of research and transcripts of the discussions. 2 refs., 21 figs., 2 tabs.

37257 (EC/IWD–157) **A large-sample extractor for determining organic contaminants in the Great Lakes.** Neilson, M.A.; Stevens, R.J.J.; Biberhofer, J.; Goulden, P.D.; Anthony, D.H.J. Environment Canada, Ottawa, ON (Canada). Inland Waters Directorate. 1988. 30p. (MICROLOG–88-06238). Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

The construction and operation of two large-sample extractors are described. They can extract water at up to 1 l/min and were used to extract water samples of approximately 50 l volume with dichloromethane during the monitoring cruises on lakes Erie, Huron, Ontario, and Superior in early 1986. Both whole water and clarified

water were extracted. The dichloromethane extracts were later analyzed for organochlorines, chlorobenzenes, polychlorinated biphenyls, and polynuclear aromatics by the National Water Quality Laboratory in Burlington, Ontario. A solution containing surrogate standards was continuously added at a fixed rate to the water being extracted. The recoveries of these surrogates provide a continuous measure of the extraction efficiency and reproducibility of the analytical process, and confirm that the processes used are valid. 5 refs., 13 figs., 5 tabs.

37258 (NEI-NO–82 vp.) **Is the deposition of anthropogenic sulphate onto Scandinavia mature for a harrowing reconsideration ?.** Sorensen, N.A. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

The paper deals with the deposition of antheropogenic sulphate onto Scandinavia. Two connections are studied. The first one concerns the concentration of the major ions in seven large Swedish rivers covering the range 60-65 NL during the period 1965 -1981. The second one concerns the investigation of the sulphate concentration in Norwegian lakes lying in a Huvial basin giving minimal weathering. Mineral weathering renders calcium in the largest amounts, 8 figures, 2 tables, 19 references.

37259 (NEI-NO–82, pp. 29-35) **Alkalinity production in soil and rock: A useful concept for understanding acidification of soil and freshwater.** Eriksson, E. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Weathering in hard rocks except limestones is, fundamentally a process of hydrolysis of primary minerals. It seems to be relativly independent of pH in fairly wide range, at least for feldspar minerals. This implies a more or less constant rate of alkalinity increase (or acidity decrease) along flow paths of underground waters. Considering the general flow patterns underground one will obtain a general stratification of acidity/alkalinity in the water all according to the age distribution. This means usually an increase in alkalinity (or decrease in acidity) with depth. However, in lakes and streams the resulting acidity/alkalinity is only dependent on the surface area of primary minerals in contact with water, not on the flow patterns, down to depths where calcite formation consumes the alkaliced alkalinity produced or mineral transformations occur that preserve the potential alkalinity of the minerals. Flow path patterns are, however, important for the specific seasonal variation in the alkalinity/acidity of run-off that takes place. Considering acid deposition the root zone will carry the heaviest part of the load followed by shallow groundwater while the deep groundwater will usually escape the acid deposition effect. Surface waters, being at the end of the water circulation path, shows the capacity of the basin to resist acidity. Estimates of alkalinity production rates can be made from knowlegde of the specific discharge and the chemistry of surface waters. 3 figures, 1 table, 13 references.

37260 (NEI-NO–82, pp. 15-28) **Attenution of acidity in groundwater flow systems.** Edmunds, W.A. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Acid groundwaters with alkalinities of 50 mg HCO-3/l or less are found in a variety of hard rock terrains and also in some sedimentary rocks such as sands, sandstones and grits. The extent to wich the rainwater acidity (H^+) is attenuated in the bedrock is primarily dependent upon the mineralogy, the degree of water-rock contact and hydrological pathway. It is suggested that the calcite saturation index (SI-c) of streams and groundwater can provide a good estimate of the bedrock sensitity and examples of its use in studies in Scotland and northwest England are given. Deeper groundwaters in the Permo-Triassic sandstones of estern England contain a record of atmopheric inputs over 1000 years and demonstrate the extent of industrial contamination of groundwater. Unsaturated zone profiles may also a way of establishing short term (10-100 y) records of acid inputs and attenuation of acidity. 7 figures, 10 references.

37261 (NEI-NO–82, pp. 37-55) **Use of representative field plots for the determination of hydrological flow-paths and associated hydrochemistry in studies of surface water acidification.** Langan, S.J.; Wheater, H.S.; Miller, J.D.; Ferrier, R.C. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Experimental plots have been establihed, as part of the SWAP (surface water acidification project) research programme, on representative soil series of tow experimental areas in Scotland. The plots are hillslope segments, draining to cut soil faces with throughflow trays at the base of the major soil horizons. Baseline monitoring of accumulated precipitation, stemflow, throughfall and throughflow is carried out at fortnightly intervals. A number of plots have been augmented to include continuous recording of precipitation and throughflow, evnt sampling of precipitation and throughflow chemistry and continuous monitoring of soil moisture dynamics using a distributed tensiometer network. The utility of these experiments in defining hydrological flow paths and associated hydrochemistry are discussed with reference to selected results from the 1986 field season. 7 figures, 5 tables, 21 references.

37262 (NEI-NO–82, pp. 91-100) **Precipitaton, surface and subsurface water chemistry in a tolerant hardwood forest basin.** Nicolson, J.A.; Craig, D.; Foster, N.W. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Water quality in the terrestrial portion of the Wishart Lake basin in the Turkey Lakes watershed, Ontario, was characterized in 1983, Ion concentrations in precipitation, soil water, groundwater at depths up to 7 m, and streamwater at two locations were examined. Mean annual H^+ concentrations decreased while alkalinity and Ca^{2+} increased with depth below the soil surface and with the length of the groundwater flow path. Solutions were dominated by Ca^{2+} and SO_4^{2-} in the unsaturated and shallow groundwater zones and in streams, and by Ca^{2+} and alkalinity in deeper groundwater. Lower alkalinity and Ca^{2+} concentrations in one streams suggested that it received a greater proportion of water from shallow groundwater and hence was more sensitive to acid inputs. With respect to watershed acidification. SO_4^{2-} from atmospheric acid deposition was supplemented by SO_4^{2-} released from the soil zone. Geochemical weathering of carbonates in the till was the major reaction controlling groundwater alkalinity, and through groundwater discharge, streamwater alkalinity. Biotic and abiotic reactions in the basin seem to be regulating drainage water chemistry more than the chemistry of precipitation. 3 figures, 2 tables, 9 references.

37263 (NEI-NO–82, pp. 107-116) **Size distribution patterns for trace elements in waters draining a small catchment, S.E. Norway.** Lydersen, E.; Salbu, B.; Bjoernstad, H.E.; Englund, J.O.; Hovind, H.; Rambaek, J.P. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Trace elements in natural fresh waters may be present in different physico-chemical forms varying f.inst. in size. Other components

(e.g. humicsubstances clay minerals) present in the waters will influence the distribution patterns of trace elements as transformation processes (e.g.sorption, complexation, aggregation, dispersion) occur. The presence of different species varying in size, charge and density will, affect the transport, the mobility and the bioavailability of an element of interest. Size fractionation techniques are appropriate for distinguishing between categories of species (e.g.low molecular weight species, colloids, particles) In the present work in situultrafiltration using hollow fibres has been utilized for studying changes in groundwaters being exposed to surface surrounding. Sampling has taken place in the catchment, at a groundwater spring and 3 sampling sites downstream. The total concentrations and the size distribution patterns for most trace elements investigated changes rapidly due to the surface expos and are to a large extent influenced by the contribution of organic substances downstreams. 4 figures, 1 table, 7 references.

37264 (NEI-NO–82, pp. 163-172) **Experience from integated simulations of runoff, water quality and residence time. International symposium on acidification and water pathways.** Bergstroem, S.; Lindstroem, G. Norsk Hydrologisk Komite, Oslo (Norway). 1987. In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Simulation of short term natural variations of pH and alkalinity in natural rivers can be accomplished by a conceptual water balance model with a rather simplistic hydrochemical substructure. This is supported by experience from applications of the PULSE-model in several Swedish basins. Detailed hydrochemical models require more physically based hydrological models with a realistic description of the residence-time of water. Such a model structure is lined out, and its verification with data on rainfall, runoff and the stable isotope oxygen-18 is shown. The transit time distribution of the model is further tested by a tracer experiment with tritium injected in a shallow till aquifer. 9 figures, 7 references.

37265 (NEI-NO–82, pp. 173-184) **Relation between water flow paths in the soil and runoff chemistry at Risdalsheia, a small headwater catchment in southern Norway.** Hauhs, M. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Runoff at the EGIL-catchment (hatched areas represent bare rock) is acidified and stems from a thin, patchy, and poorly developed soil. The fact that the whole catchment is covered by a roof that extends 2-3 meters beyond its boundaries provides an outstading possibility to control catchment hydrology. The patterns of soil water movement during storm runoff were identified by automatically recording tensiometers. Even under flow conditions equivalent to 50 (mm/day) no signs of surface flow or components bypassing the soil were found. Flow occurred near the soil surface and was mixed with resident soil water. The role of these pathways for the interaction between solution and rundoff chemistry was investigated by a tracer experiment with LiBr as the tracer solute. The tracer episode was conducted under hydrologic steady-state conditions. During the episode soil solution throughout the catchment was monitored by 16 lysimeters. Chemical changes due to soil/soil-solution interaction occurred mainly during unsaturated, vertical infiltration. Saturated, lateral flow caused high porewater velocities (> 10 m/hr) and only SO-4, NO-3, and H were changed along the horizontal flow path. Sulfate in runoff after the dry period that preceeded the tracer episode partly came from oxidation of reduced S in stangnat pockets of soil. The key processes that explain the behavior of stormflow chemistry at the EGIL-catchment are: subsurface, translatory flow and equilibrium reactions along vertical transport across the vadose zone. These results correspond to observations from other headwater catchments that are much larger in size. 5 figures, 3 tables, 16 references.

37266 (NEI-NO–82, pp. 249-258) **Aluminium dynamics in response to experimental additions of acid to a small Norwegian stream.** Norton, S.A.; Henriksen, A.; Wathne, B.M.; Veidal, A. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

The paper deals with aluminium dynamics in response of acid to experimental additions of acid to a small Norwegian stream which was experimentally acidified four times to a pH near 4 with H_2SO_4. Each experiment lasted approximately 24 hours. Over 50 percent of th acid was neutralized in 135 m of stream bed by the release of Ca. Mg, and Al from the streams bed as well as protonation of HCO_3. Ca release declined in a few hours and was only slightly regenerated after 48 hours of normal flow and chemistry. Neutralization of H+ by Al dissolution was initially dominated by the release of aluminum from a rapidly dissolevd but small pool which was not regenerated after two days and subsequently by a large reservoir of slightly less soluble Al. Al concentration approached values in equilibrium with the stream pH within 80 m. This indicates that episodes of depressed pH and elevated Al streams are probably initially largely controlled by the release of Ca from the stream bed. This process is dominated by moss in Bonnabekken. 2 figures, 3 tables, 8 references.

37267 (NEI-NO–82, pp. 281-290) **Hydrologic and chemical characteristics of darkwater, clearwater and acidic lakes in the United States.** Brakke, D.F.; Eilers, J.M.; Landers, D.H. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Major differences were found in the distribution of lake types between areas. Drainage lakes were most common in the Northeast and West. Seepage lakes were common in some areas of the Upper Midwest (59% of the lakes in Northcentral Wisconsin) and Florida (66%). Seepage lakes represented 18% of the lakes in the West. Seepage lakes in Northeast had ANC values similar to drainage lakes whereas seepage in the Upper Midwest and Florida had lower ANC compared to drainage lakes. Reservoirs in all regions had the highest median ANC Ca^{2+}. Hydrologic residence times were two to three times shorter in the Northeast than in the Upper Midwest, but DOC was inversely related to residence time in both areas. . Clearwater lakes suggesting the acidic lakes were derived from low DOC, clearwater lakes. 4 figures, 3 tabels, 14 references.

37268 (NEI-NO–82, pp. 377-391) **Effect of acidification on structures in soil and water.** Kucera, V. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Increased corrosion due acidification of water and soil may arise in susceptible areas as one of the long-range transport of air pollutants. Corrosion in soil is a complicated process and dose reponse relations between the corrosion rate and acidification parameters are lacking. Distribution mains, galvanized foundations of power line towers and lead sheathed cabels belong to potentially susceptible structures. Falling alkalinity and pH increase the corrosion rate of steel, copper, zinc and lead in water. Increased internal corrosion of water pipes is considered a great technical problem and elevated lead contents in tap water create also a potential health hazard. 7 figures, 43 references.

37269 (NEI-NO–82, pp. 393-402) **Corrosion aggressiveness og groundwaters on the underground route in Warsaw.** Pich, J.; Rebas, E. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577-–: International symposium on acidification and water

pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Hydrochemical research has proved that ground waters in quaternary formations through which the Warsaw underground passes are very strongly polluted. The chemism of these waters considerably varies from the natural hydrochemical background. This is result of prolonged urbanization of the area and communal and industrial waters are the source of contamination. Over the decades, as the anthropogenic influence has became more intensive, degradation of the quality of groundwaters will increase. It is a widely acknowledged phenomenon that polluted groundwaters are much more aggresive towards iron concrete. This fact forces us to use proper anticorrosive materials and technologies at all Warsaw underground building sites and raises the overall costs of this construction. 4 firgures, 2 tables, 2 references.

37270 (NEI-NO–82, pp. 405-416) **Prediction models for acidification.** Kaemaeri, J. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Only in recent years with the fast development of modern computers has analysis of ecological systems become a practical possibillty. Systems analysis implies a description of the system and its processes, i.e. a development of model representing real system, the behavior of which closely resembles that of the real system. Two broad categories of models can be distinguished capable of predicting acidification: Research models and Management models. In acidification research, models of the first type have proved useful in their hypothesis-generating role as well as in improwing our understanding of the important mechanisms of acidification. Management models, in turn, can significantly assist in the evaluation of emission control strategies. There are two basic ways of using a prediction model in a decision- marking context: scenario analysis and optimization analysis. The different ways to use prediction models are discussed. 3 figures, 1 tables, 23 references.

37271 (NEI-NO–82, pp. 417-434) **Modelling long term stream acidification trends in upland Wales.** Whitehead, P.G.; Neale, R.; Paricos, P. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

Historical reconstructions and predictions of streamwater acidification are presented for mooreland and afforested catchments in the Welsh Uplands at Plynlimon and Llyn Brianne. The model MAGIC (Model of Acidification of Groundwater in Catchments) is used to illustrate that atmospheric deposition and conifer afforestation can increase stream acidity. The historical trends determined by the model illustrate that long term acidification has been present since the turn of the century and will continue unless either deposition levels are reduced significantly or liming is undertaken on a major scale. 11 figures, 5 tabels, 29 references.

37272 (NEI-NO–82, pp. 435-444) **Mathematical model for podzolic soil profiles exposed to acid deposition.** Sverdrup, H.U.; Warfvinge, P.G.; Broemsen, U. von. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

A simple model for soil acidification describes the observed pH and base saturation profiles in a Swedish podzol affected by acid deposition. The models is based on a mechanistic respresentation of ion exchange and the weathering rade and is based on a mass balance for calcium and alkalinity. 5 figures, 3 tables, 17 references.

37273 (NEI-NO–82, pp. 447-458) **Acidification and water pathways. What about the future?.** Seip, H.M. Norsk Hydrologisk Komite, Oslo (Norway). 1987. (CONF-870577–: International symposium on acidification and water pathways, Bolkesjo, Norway, 4-8 May 1987). In *Acidification and water pathways. Vol. 1. Proceedings of International symposium on acidification and water pathways, Bolkesjoe, 4-5 May 1987.* Order Number DE89766881/JAW. Available from NTIS (US Sales Only), PC A20/MF A01.

The paper gives a short review of present knowledge of acidification of soils and water and gaps in knowledge identified. on this basis research needs are pointed out. Future trends in deposition of S and N compounds and likely developments in acidification of soil and water are discussed. 3 figures, 20 references.

37274 (PB–89-169171/XAB) **Persistent Marine Debris, challenge and response: the Federal perspective.** Alaska Univ., Fairbanks, AK (USA). Sea Grant Program. 1988. 50p. Available from NTIS, PC A03.

See also PB–89-109938. Color illustrations reproduced in black and white.

Information in the publication is drawn from the 1988 Report of the Interagency Task Force on persistent Marine Debris. The subject areas included in the report are: scope of the problem; sources of marine debris; effects on wildlife and humans and what measures are being done to prevent the problem.

37275 (PB–89-170344/XAB) **AQUIRE: Aquatic Toxicity Information Retrieval data base. Data file.** Anderson, E.; Pilli, A. Environmental Protection Agency, Duluth, MN (USA). Environmental Research Lab. 13 Mar 1989. mag ta Available from NTISCP T02.

Source tape is in the ASCII format. This restricts preparation to 9 track, one-half inch tape only. Identify recording mode by specifying density only. For price at 6250 bpi density, call NTIS Computer Products.

The purpose of Aquatic Toxicity Information Retrieval (AQUIRE) data base is to provide scientists and managers quick access to a comprehensive, systematic, computerized compilation of aquatic toxicity data. Scientific papers published both nationally and internationally on the toxicity of chemicals to aquatic organisms and plants are collected and reviewed for AQUIRE. Independently compiled data files that meet AQUIRE parameter and quality assurance criteria are also included. Selected toxicity-test results and related testing information for any individual chemical from laboratory and field aquatic toxicity tests are extracted and added to AQUIRE. Acute, sublethal, and bioconcentration effects are included for tests with freshwater and marine organisms. The total number of data records in AQUIRE now equals 104,500. This includes data from 6000 references, for 5200 chemicals and 2400 test species. A major data file, Acute Toxicity of Organic Chemicals (ATOC), has been incorporated into AQUIRE. The ATOC file contains laboratory acute test data on 525 organic chemicals using juvenile fathead minnows. The complete data file can be accessed by requesting review code 5 as a search parameter.

37276 (PNL–6955) **Hanford Site implementation of the National Environmental Policy Act: Activities tracking.** Killinger, M.H.; Selby, K.B. Pacific Northwest Lab., Richland, WA (USA). Jun 1989. 33p. Sponsored by DOE Environment Health & Safety. DOE Contract AC06-76RL01830. Order Number DE89014162/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The National Environmental Policy Act (NEPA) environmental review process is mandatory for federal agencies. This report provides the DOE Richland Operations Office (DOE-RL) and the Hanford contractors with a method for tracking, integrating, and coordinating NEPA compliance activities at the Hanford Site. The environmental review process is briefly described and illustrated in a flow chart. The report then explains a method for developing project timecharts that show when documents or decision points were completed or are projected to be completed. The tracking system has been automated and placed on the Hanford Local Area Network (HLAN). Time schedules for many Hanford projects are available for viewing. 4 refs., 6 figs.

37277 Determinants of Daphnia clonal diversity in lakes. Kolasa, J. (Univ. of Windsor, Windsor, Ontario (CA)); Mort, M. *Bulletin of the Ecological Society of America (USA),* 68(3): 343 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

Populations of Daphnia show high clonal diversity in large lakes. Hypothetically, this diversity may be maintained by either intrinsic population mechanisms such as reproductive strategies or by structuring properties of habitat such as heterogeneity and associated scale differences. To discriminate between these two classes of factors the authors have applied a predictive hierarchichal model to clone data from 9 northern German lakes (46 clones; N=1236). The model operated reliably by using ecological ranges (a course measure of heterogeneity) of taxa. Concordance of observed patterns and predictions of the model would favor the heterogeneity hypothesis, while the opposite result would suggest greater influence of population-based mechanisms in explaining clonal diversity/abundance patterns. The results of their analysis point towards habitat heterogeneity as the dominant determinant of diversity and abundance structure of Daphnia populations in lakes.

5203 Radioactive Materials Monitoring and Transport

37278 (EPA–520/5-88-016) **Radiological surveys of Naval Facilities on Puget Sound.** Lloyd, V.D.; Blanchard, R.L. Environmental Protection Agency, Washington, DC (USA). Office of Radiation Programs; Environmental Protection Agency, Montgomery, AL (USA). Eastern Environmental Radiation Facility. Mar 1989. 33p. Sponsored by Environmental Protection Agency. Available from OSTI - US Environmental Protection Agency, Office of Radiation Programs, 401 M. Street SW, Washington DC 20460.

The radiological surveys of Puget Sound Naval Shipyard, Submarine, Base, Bangor, and the proposed site for the Carrier Battle Group Homeporting Project at Everett provide the basis for the following conclusions: A trace amount of Co-60 (0.04 {+ } 0.01 pCi/g) was detected in one sediment sample at PSNS. All other radioactivity detected in the eighty sediment samples is attributed to naturally occurring radionuclides or fallout from past nuclear weapons tests and the Chernobyl reactor accident in 1986. Results of core sampling did not indicate any previous deposit of Co-60 in the sediment. Water samples contained no detectable levels of radioactivity other than those occurring naturally. Two mollusk samples collected at SUBASE Bangor contained trace amounts of Ag-110m. The presence of this radionuclide was confirmed by decay measurements. The source of Ag-110m was not determined, but is possibly due to fallout from the Chernobyl reactor accident. All other radioactivity detected in the biota samples is attributed to naturally occurring radionuclides or fallout from past nuclear weapons tests. External gamma-ray measurements did not detect any increased radiation exposure to the public above natural background levels. The preoperational survey of the proposed site at Everett confirmed the presence of only background levels of radioactivity. Based on these surveys, current practices regarding nuclear-powered warship operations have resulted in no increases in radioactivity that would result in significant population exposure or contamination of the environment. 17 refs., 4 figs., 4 tabs.

37279 (EPA–520/5-88-019) **Radiological survey of San Diego Bay.** Semler, M.O.; Blanchard, R.L. Environmental Protection Agency, Montgomery, AL (USA). Eastern Environmental Radiation Facility. Jun 1989. 25p. Sponsored by Environmental Protection Agency. Available from OSTI - US Environmental Protection Agency, Office of Radiation Programs, 401 M Street SW, Washington, DC 20460.

A radiological survey of three sites in San Diego Bay provided the basis for the following conclusions: 1. Small quantities of Co-60 (0.02-0.05 pCi/g) are present in the bottom sediments in some areas of the harbor at the Submarine Base. Most, if not all, of the Co-60 contamination present probably originated prior to the earlier 1967 survey that reported Co-60 levels as much as 300 times larger than those observed in this study. The highest Co-60 concentration measured is now less than one percent of the normal background radioactivity in harbor sediment samples. 2. No tritium or gamma-ray emitters, other than trace amounts of those occurring naturally, were detected in surface water from the dock areas or in nearby drinking water supplies. 3. Only radionuclides of natural origin and trace amounts of Cs-137 from fallout of previous nuclear weapons tests were detected in samples of kelp, algae, and fish taken from the harbor at the Submarine Base. 4. Gamma-ray surveys of the harbors near the docking areas and along shorelines and beaches near the shipyards failed to detect any exposure rates above background. 3 refs., 4 figs., 3 tabs.

37280 (PB–89-162283/XAB) **Fiscal year 1987 program report (Massachusetts Water Resources Research Center). Annual report.** Godfrey, P.J. Massachusetts Univ., Amherst, MA (USA). Water Resources Research Center. Dec 1988. 64p. Available from NTIS, PC A04/MF A01.

See also PB–88-223516.

The 1987-88 Massachusetts WRRC program (Federal FY87) focused on areas of high priority for the state and region: acid-deposition impacts, minimization of nitrate ground-water contamination, drinking water pricing, and proposed water diversion from a 'Wild and Scenic' river. The Water Resources Institute Program (WRIP) projects studied central Massachusetts cloud and fog acidity, peat use in rural sewage systems to minimize nitrate ground-water contamination, and determination of true water costs to help plan new sources or infrastructure renovation.

37281 (PB–89-175459/XAB) **Evaluation criteria guide for water-pollution prevention, control, and abatement programs. Technical manual.** Department of the Army, Washington, DC (USA). 23 Apr 1987. 152p. (DA-TM–5-814-8). Available from NTIS, PC A08/MF A01.

The manual describes principles and procedures to be followed in formulating and conducting a water-pollution prevention, control, and abatement program, and in planning facilities required for solution of water pollution problems. The manual provides guidance for selecting and applying proven technologies for waste-water treatment and for solids handling and disposal. Both capital expenditures and operating costs are outlined. While the manual is directed primarily toward handling of domestic waste-waters, system alternatives for handling special process wastes from munitions manufacture and processing, metal plating, washrack, photographic, laundry, hospital and other sources are also addressed. The manual includes technical and cost information needed for project decisions and supporting data.

53 ENVIRONMENTAL–SOCIAL ASPECTS OF ENERGY TECHNOLOGIES

5301 Social and Economic Studies

37282 (CRSL–ESRF087) **Planning for large-scale construction projects. A socio-economic guide for communities, industry, and government.** Storey, K.; Shrimpton, M. Community Resource Services Ltd., St. John's, NF (Canada). 1987. V (MICROLOG–89-00755). Available from Canada Oil and Gas Lands Administration, 355 River Rd., 15th Floor, Tower B, Ottawa, ON, Canada K1A 0E4; $18.00 CAN; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

Large-scale construction projects such as power plants bring both benefits and problems for communities near the project sites. Those communities need to know about possible socio-economic effects and ways to deal with them. It is important for the community, government, and industry to know about the likely effects of construction projects. Then they can assess more accurately the costs and the benefits of the project and therefore in a better position to seek or allocate financial resources. Most importantly, they can develop planning strategies prior to the project. Advance planning helps to prevent some adverse effects, to minimize or mitigate others, and to enhance beneficial ones. This guide provides information that will help local people, government officials, and developers to develop plans for the successful management of large-scale construction projects. A traditional planning model is adopted in which impact issues are identified, strategies to deal with them are selected and implemented, outcomes are monitored, and adjustments are made as necessary. The guide is organized into four sections: the planning process; the impact assesment and screening process; possible management strategies dealing with issues such as employment, transportation, accommodation, community services, funding, and wind-down; and a list of supplementary sources of information about community planning, impact assessment, and growth management. 30 refs., 3 figs., 2 tabs.

37283 (SU/G–2-86) **A guide to socio-economic impact monitoring in the Northwest Territories.** Bone, R.M.; Stewart, D.A. Saskatchewan Univ., Saskatoon, SK (Canada). Dept. of Geography. 1987. 54p. (MICROLOG–88-06138). Available from Indian and Northern Affairs Canada, Reference Centre, Les Terrasses de la Chaudiere, Ottawa, ON, Canada K1A 0H4; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

A monitoring program was conducted to investigate the economic and social effects of an oilfield expansion and pipeline project on northern peoples in Canada. The goals of this report are to document the essential elements of the program and to make recommendations for future monitoring efforts in the Northwest Territories. The basic principle underlying this report is that socio-economic monitoring of large-scale industrial projects is an important government function and that monitoring, by providing socio-economic impact information, helps to formulate policy aimed at reducing regional economic and social inequalities. The purpose of monitoring is twofold: to record the economic and social characteristics of a population over time and to identify changes in that population caused by the construction of a large-scale industrial project; and to improve the management of development impacts. The first step in the monitoring program involved community surveys to gather necessary socio-economic information from households and businesses. Particular attention was paid to the impacts on native peoples. Data were gathered for three key periods: pre-construction, construction, and post-construction of the pipeline and related facilities. Responses were recorded in a form facilitating computerized data processing. The design of the monitoring program is discussed, considering the data needed, the selection of questions, questionnaire design, and data collection procedures. Field survey methods, creation and maintenance of a data base, and creation of reports are also described. Recommendations are provided for future monitoring programs.

5302 Assessment of Energy Technologies

55 BIOMEDICAL SCIENCES, BASIC STUDIES

37284 (PB–89-162002/XAB) **Preliminary assessment of habitat protection needs for West Indian manatees on the east coast of Florida and Georgia. Final report.** Marine Mammal Commission, Washington, DC (USA). Dec 1988. 121p. Available from NTIS, PC A06/MF A01.

The report assesses information on the status of endangered West Indian manatees (Trichechus manatus) on the east coast of Florida and Georgia in the southeastern United States and recommends actions to improve protection of the species and its habitat in that area. Manatees on the east coast of Florida and Georgia appear to constitute a discrete population numbering perhaps 700 to 900 animals. Based on carcass-salvage data, recent annual mortality rates of between 8% and 10% are indicated. Perhaps 3% to 4% of the population was killed as a result of collisions with boats during 1987, and this threat appears to be increasing. Collisions with boats and destruction of essential habitat are the principal threats to the population. Recommendations include: quadruple the size of the boat-speed regulatory system on the east coast of Florida; limit development in essential manatee habitats; acquire additional manatee habitat as additions to Federal and State refuges and preserves.

37285 (ANL/MCS-TM–132) **Generating alignments of genetic sequences.** Butler, R.; Butler, T.; Foster, I.; Karonis, N.; Olson, R.; Overbeek, R.; Pfluger, N.; Price, M.; Tuecke, S. Argonne National Lab., IL (USA). Mathematics and Computer Science Div. Jun 1989. 25p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE89014163/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Molecular biologists have recently developed the technology required to determine the genetic information of complete organisms. They are now faced with a number of interesting computational problems as they attempt to process data. We are interested in developing a software environment to support molecular biologists. As their computational problems are frequently complex and computation-intensive, we believe that such an environment must both support rapid prototyping of new algorithms and allow high performance execution on a variety of multiprocessor configurations. We believe that this can be achieved using a bilingual approach, in which the upper levels of programs are coded in a concurrent logic programming language and the lower levels in C. The concurrent language provides ease of parallel programming and portability over a range of parallel computers; C provides efficient implementation of low-level algorithms. To explore the suitability of this approach, we have investigated its use in attacking a prototypical computational problem, the problem of aligning a set of sequences of genetic material. This report introduces the algorithm used to generate alignments, outlines the techniques used to develop the bilingual program, and describes initial experiments in parallel execution of this program. 7 refs., 2 tabs.

37286 (CONF-8704370–, pp. 3-16) **What transposable elements do in bacteria.** Shapiro, J.A. (Univ. of Chicago, IL (USA)). Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Transposable elements are well known as agents of genome restructuring and mutagenesis in bacteria. In addition to the widely recognized phenomena of sequence disruption and transcription blocks, their influence on genome functioning comprises multiple positive and negative effects. Some examples of these are detailed: Tn1000 can act at a distance as a transcriptional silencer of the ebgA promoter; IS2 utilizes several kinds of sequence rearrangements to create new promoters; IS1 and IS5 can act as transcriptional enhancers of the existing but poorly expressed β-glucoside (bgl) promoter. Besides having a wide repertoire of mechanisms for altering genome function, the activities of transposable elements display considerable responsiveness to changes in bacterial physiology. Some examples of such responsiveness are detailed: insertions of Tn3, IS1, and IS5 are highly sensitive to the topology of target DNA; phase Mu can mediate the fusion of two different protein coding sequences, and this fusion occurs in a highly regulated manner in response to selection for hybrid protein function. A Mudlac element can block plasmid inheritance, and this inhibitory activity can be programmed to occur at specific times in

colony development. These examples of genomic modulation and physiological responsiveness point to useful roles for transposable elements in facilitating bacterial survival and proliferation.

37287 (CONF-8704370–, pp. 63-70) **Regulation of the maize suppressor-mutator element.** Fedoroff, N. (Carnegie Institution of Washington, Baltimore, MD (USA)); Masson, P.; Banks, J. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

The nature of the regulatory mechanisms governing expression of the transposable maize suppressor-mutator (Spm) element has been deduced from genetic and molecular studies. Small, extensively deleted, transposition-defective Spm (dSpm) elements insert into and near genes in such a way that gene expression is under either the negative or positive control of a separate nondefective element, implying that the element encodes a trans-acting gene product that interacts with element sequences. The properties of the a-m2 Spm insertion alleles of the maize a locus suggest that the element-encoded regulatory mechanism is a positive one. Spm elements also undergo reversible genetic inactivation, possibly by methylation of the element, and there is evidence that the element can exist in two different states of inactivity. One of the inactive states is relatively unstable and readily reversed by the element's positive regulatory function, whereas the other inactive state, termed cryptic, is very stable and can be reversed by the element's positive regulatory function only at a low frequency.

37288 (CONF-8704370–, pp. 71-78) **Functional potential of the human LINE-1 family of interspersed repeats.** Singer, M.F. (National Cancer Institute, Bethesda, MD (USA)); Skowronski, J.; Fanning, T.G.; Mongkolsuk, S. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

LINE-1s (L1s) are likely to be mammalian movable elements that transpose through a mechanism involving an RNA intermediate and an element-encoded reverse transcriptase. Such a mechanism implies the occurrence of L1 transcription and translation. Earlier, the authors identified unit length L1 transcripts in the cytoplasmic, poly(A)$^+$ RNA of a human teratocarcinoma cell line, NTera2D1. The RNAs represent only one L1 strand, the one with long open reading frames (ORFs), and initiate (5' end) with the first residue of the genomic L1 family members. They have now been characterized further by sequence analysis of cDNAs. Although each of 19 cDNAs is slightly different in sequence and, thus, is probably transcribed from a different family member, their overall structures are similar and consistent with the RNAs being intermediates in reverse-transcription-mediated transposition. In the cDNA consensus sequence, an approximately 5-kb reading frame is broken in two (to form a 5' ORF 1 and a 3' ORF 2) by a short region containing two in-frame stop codons. ORF 2 (3852 bp) includes regions that could encode a polypeptide with homology to both reverse transcriptase and a nucleic-acid-binding domain. RNA transcribed from at least one of the cDNAs can be translated in vitro, suggesting that the cDNA represents a functional mRNA.

37289 (CONF-8704370–, pp. 79-90) **Factors affecting retrotransposition of intracisternal A-particle proviral elements.** Kuff, E.L. (National Institutes of Health, Bethesda, MD (USA)). Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Although intracisternal A-particle (IAP) proviral elements are abundant in the mouse genome, a number of factors restrict their potential for retrotransposition. The most obvious restrictions are imposed by genetic defects in the elements themselves and by the inhibitory effects of genomic methylation. Sequestration of elements in genetically inert heterochromatin may also be a major limiting factor. Even when transcription of competent provirus(es) has been initiated, the location and other properties intrinsic to the particles themselves may hamper reverse transcription and/or integration of provirus. Most of the IAP elements found to be transposed have contained major deletions involving both the gag and pol coding regions; retrotransposition of such elements must depend upon co-expression of competent IAP genes. A number of factors that limit retrotransposition are common to both IAPs and the Ty elements of yeast and may be general mechanisms for maintaining equilibrium between reiterated endogenous transposable elements and their host genome.

37290 (CONF-8704370–, pp. 91-100) **Two families of human endogenous retroviral genomes.** Callahan, R. (National Institutes of Health, Bethesda, MD (USA)). Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Retroviruses are the causative agents of naturally occurring tumors in diverse vertebrate species. In addition to their spread as infectious agents, they can also enter the germ line and be transmitted to subsequent generations of the host as stable Mendelian genetic elements (endogenous retroviruses, Erv). DNA sequences related to infectious retroviruses from several mammalian and avian species represent approximately 0.1% of the human genome. They are found on many, if not all, of the human chromosomes. These retroviral-related sequences can be divided into two diverse families (designated class I and II) based on their relative homology to either mammalian type C or to types A, B, D, and avian type C retroviral genomes. Some of the human endogenous retroviral (Herv) genomes are organized in a manner expected for an integrated proviral genome; others are present in one of two aberrant structures. Expression of Herv genomes has been detected in normal and tumor tissues, as well as in tissue culture cell lines. Although there is no evidence at the present time that they encoded infectious virus, it seems possible that they could be associated with certain inherited diseases or neoplasias.

37291 (CONF-8704370–, pp. 115-122) **Transposons as probes of regulatory machinery.** Bingham, P.M. (State Univ. of New York, Stony Brook (USA)); Chou, T.; Zachar, Z. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

su(w^a), suppressor-of-white-apricot, is a retrotransposon insertion allele-specific suppressor locus in Drosophila. As such, su(w^a) is a presumptive regulatory gene. The authors review here their studies indicating that su(w^a) expression is autoregulated at the level of splicing. Specifically, the su(w^a) protein product apparently feeds back to block splicing of the first two of the seven introns whose removal is required to produce the message coding for this protein. Implications of these and related observations for mechanisms of regulation of metazoan gene expression are discussed. Furthermore, the authors briefly review prospects for progress resulting from using transposon parasites to probe the regulatory machinery of their cellular hosts.

37292 (CONF-8704370–, pp. 131-144) **Regulation of expression and transposition of murine endogenous retroviral elements.** Wilson, M.C. (Research Institute of Scripps Clinic, La Jolla, CA (USA)); Policastro, P.F.; Fredholm, M. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

The majority of murine leukemia virus (MLV)-related sequences in the murine genome are defective for production of infectious virus

but are transcribed in a variety of tissues. Their transcription is governed by at least two trans-acting genes, Gv-1 and Gv-2, as well as tissue specific factors. Some of these endogenous retroviral transcripts contain deletions of gag-pol and env coding sequence. Oligonucleotide probes spanning these deletions have been used to both isolate Gv-1 responsive genes from murine strain 129 and demonstrate the mobility of these elements among different strains of inbred mice. A target sequence for trans regulation within the long terminal repeats (LTR) of these endogenous sequences, but not in infectious virus, is postulated. The authors propose that the movement of these sequences, mediated by transcription and retrotransposition, may represent mutagenic events within the murine genome.

37293 (CONF-8704370–, pp. 155-168) **Genetic control of recombination between repeated sequences.** Rothstein, R.J. (Columbia Univ. College of Physicians and Surgeons, New York, NY (USA)); Arthur, W.L.; Wallis, J.W. Jr.; Ronne, H.; Thomas, B.J. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

In thinking about genome stability in eukaryotes, it is important to consider the question of the control of recombination between repeated sequences. The genomes of virtually all organisms are filled with repeated sequences. Thus, if there were uncontrolled recombination between these elements, deletions, inversions and translocations would be generated at high frequency. Since this is not observed, it implies that these recombination events may be suppressed. Recent observations in yeast emphasize the importance of this postulated control, since meiotic recombination between homologous sequences in nonhomologous positions (ectopic gene conversion) has been found to occur very near the levels observed for homologous recombination. In this report the authors discuss recombination among repeated sequences including δ-sequences and Ty elements. They will focus on the mechanism of rearrangements that use the host recombination apparatus.

37294 (CONF-8704370–, pp. 183-194) **Regulatory aspects of the expression of P-M hybrid dysgenesis in Drosophila.** Kidwell, M.G. (Univ. of Arizona, Tucson (USA)). Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

The degree of mobility of P elements in Drosophila melanogaster appears to be largely dependent on P-element-encoded properties. Intact, autonomous elements encode a trans-acting transposase and at least some classes of truncated or deleted elements apparently code for regulatory molecules. Transposition is restricted to the germline and is controlled at the level of mRNA splicing. Environmental variables, such as temperature and aging, have important effects on the level of expression of specific phenotypic traits. There is some evidence for variability in host functions affecting P element mobility, but the ease of interspecific transfer suggests that, if such functions exist, they must have been highly conserved during the evolution of the genus Drosophila. Site specificity for P element insertion occurs at several levels, including those of the nucleotide and the individual gene. Secondary mutations usually occur at least one to two orders of magnitude more frequently than primary insertion mutations. Studies of the evolution and population biology of P elements are providing valuable insights into the role of element-encoded regulatory functions in natural and laboratory populations.

37295 (CONF-8704370–, pp. 235-244) **Effect of temperature on Ty transposition.** Paquin, C.E. (Univ. of Cincinnati, OH (USA)); Williamson, V.M. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

A method of estimating the transposition rate of the transposable element Ty (transposon yeast) in the yeast Saccharomyces cerevisiae has been developed. The transposition assay is based on the altered expression of two alcohol dehydrogenase (ADH) structural genes, ADH2 and ADH4, upon insertion of a Ty adjacent to these genes. Ty transposition to both ADH2 and ADH4 is 100-fold more frequent at 15°C or 20°C than at 30°C, the optimum growth temperature for S. cerevisiae. These results demonstrate that transposition rates can be dramatically altered by changes in environmental conditions.

37296 (CONF-8704370–, pp. 299-308) **Retrovirus-like particles, reoviruses, and c-src expression in malignant tumors of Drosophila melanogaster.** Gateff, E. (Johannes Gutenberg Univ., Mainz (West Germany)). Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Mutated, recessive differentiation genes of Drosophila melanogaster cause malignant transformation of specific tissues and cell types in homozygous mutant animals. Retrovirus-like particles (RLPs; previously virus-like particles, VLPs) were regularly observed in mutant tumor cells. The presence of RLPs and copia transcripts was studied in the tumorous lethal(2)giant larvae (l(2)gl) neuroblasts in situ and after transplantation in adult abdomens. Neither RLPs nor copia transcripts were detected in the mutant neuroblasts in situ. However, large amounts of copia transcripts were found in RLPs from l(2)gl neuroblasts subcultured in the abdomens of wild-type flies. Karyotypic abnormalities increased dramatically with each new transfer generation in subculture in vivo. Moderate amounts of RLPs were also found in the blood cells in situ in two blood tumor mutants: lethal(a)malignant blood cell neoplasm, l(1)mbn, and lethal(3)malignant blood cell neoplasm, l(3)mbn. The number of RLPs increased drastically after in vitro subculture of l(3)mbn blood cells and the blood cells of the mutant lethal(2)malignant blood neoplasm, l(2)mbn. In addition to large amounts of RLPs, a new respiratory enteric orphan virus (reovirus) designated as Drosophila F virus (DFV) and a well-known picorna virus, the Drosophila C virus (DCV), were found in in-vitro-subcultured l(2)mbn and l(3)mbn blood cells. Compared to the tumorous blood cells in situ, the in-vitro-subcultured blood cells showed slightly elevated c-src expression.

37297 Structural studies of Klenow fragment: an enzyme with two active sites. Steitz, T.A. (Yale Univ., New Haven, CT (USA)); Beese, L.; Freemont, P.S.; Friedman, J.M.; Sanderson, M.R. pp. 8 of Cold Spring Harbor symposia on quantitative biology. Volume 52, Evolution of catalytic function. Cold Spring Harbor Laboratory, Cold Spring Harbor, NY (1987). From Cold Spring Harbor symposia on quantitative biology: evolution of catalytic function; Cold Spring Harbor, NY, USA; Jul 1987.

Among the catalytic activities that were presumably required very early in evolution is that of RNA and/or DNA polymerase. The ability to replicate the nucleic acid genome accurately is essential to the process of evolution. One might expect that the basic polymerase function of the present-day DNA polymerases evolved from a common ancestor, since an intermediate evolutionary state of switching from one polymerase to another is difficult to imagine. It may even turn out that RNA and DNA polymerases are evolutionarily and thus structurally related. A detailed understanding of the enzymatic mechanism of current DNA and RNA polymerases might or might not provide clues concerning the possible nature of earlier prebiotic RNA polymerases. The crystal structure of the Klenow fragment shows that the 605-amino-acid polypeptide is folded into two distinct structural domains of approximately 200 and 400 amino acids. The amino terminal one third of the Klenow fragment can bind two divalent metal ions and a molecule of dNMP. The larger carboxy-terminal domain forms a structure that contains a deep cleft, about 20-24 Å wide and 25-35 Å deep. Above the cleft are 40 to 50 amino acid residues that are partially disordered in the crystal structure, indicating that this region is flexibly attached to the rest of the molecule.

37298 (DOE/ER/60623–1) **A soliton mechanism for DNA melting: Progress report, November 1, 1988–October 31, 1989.**

Sobell, H.M. Rochester Univ., NY (USA). Dept. of Biophysics. Jun 1989. 2p. Sponsored by DOE Energy Research. DOE Contract FG02-88ER60623. Order Number DE89013967/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A key feature of the soliton mechanism for DNA melting that has been proposed is the existence of an activated metastable DNA conformational state called β-DNA. Being metastable, this DNA conformation must be "pinned" or stabilized by an intercalating drug molecule such as actinomycin D in order to be observed. We have synthesized a series dodecamer oligonucleotide fragments, and have succeeded in forming crystalline complexes with actinomycin D. Their x-ray determination should allow atomic resolution and clarify how actinomycin binds to DNA. This will allow us to prove (or disprove) the actinomycin-DNA model we have proposed.

37299 (INIS-mf–11950) **Development of radioimmunological methods to determine the constituents of nicotiana plants and cell cultures.** Kolossa, E. Muenchen Univ. (Germany, F.R.). Fakultaet fuer Chemie und Pharmazie. 20 Dec 1983. 220p. (In German). Order Number DE89788270/JAW. Available from NTIS (US Sales Only), PC A10/MF A01.

This study outlines the technique, optimisation and range of uses of radioimmunoassays for nicotine as well as α-cembratriendiol and β-cembratriendiol, which due to their specificity are suitable for relevant detection procedures in non-purified raw extracts from plants. The tests are characterised by high accuracy (with an intra-assay variance between 3.3 and 4.5% and an interassay variance between 12 and 17%) and sensitivity (the limits of detection being 0.5 ng for nicotine, 1 ng for α-cembratriendiol and 3 ng for β-cembratriendiol) and easy enough to handle to permit quantitative determination of 800 samples per day and person.

37300 (SAND–89-1145C) **Quantitative infrared spectroscopy of glucose in blood using partial least-squares analyses.** Ward, K.J.; Haaland, D.M.; Robinson, M.R.; Eaton, R.P. Sandia National Labs., Albuquerque, NM (USA). 1989. 11p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890674–1: 7. international conference on Fourier transform spectroscopy, Fairfax, Virginia, USA, 19-23 Jun 1989). Order Number DE89014706/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The concentration of glucose in drawn samples of human blood has been determined using attenuated total reflectance (ATR) Fourier transform infrared (FT-IR) spectroscopy and partial least-squares (PLS) multivariate calibration. A twelve sample calibration set over the physiological glucose range of 50-400 mg/deciliter (dl) resulted in an average error of 5.2 mg/dl. These results were obtained using a cross validated PLS calibration over all infrared data in the frequency range of 950-1200 cm^{-1}. These results are a dramatic improvement relative to those obtained by previous studies of this system using univariate peak height analyses. 3 refs., 3 figs.

This project involves kinetic studies of RNA splicing reactions catalyzed by the intervening sequence from the precursor rRNA of Tetrahymena thermophila. Fluorescent substrates were developed that can be used for transient kinetics experiments. The ultimate goal is identification and understanding of each step in the mechanism for splicing.

37302 (PB–89-158752/XAB) **Recombinant DNA in Japan: current status and future prospects.** Department of Commerce, Washington, DC (USA). Office of Japanese Technical Literature. 1989. 147p. Available from NTIS, PC EE06/MF A01.

The goals of the report are to evaluate the current status of Japanese Recombinant DNA Biotechnology, and to suggest ways to improve the use of the Japanese biotechnology literature. Abstracts and titles of papers presented at Japanese scientific meetings held from November 1987 to November 1988 were evaluated and translated to give the reader an overall idea of the areas in which Japanese researchers are active. In general, Japanese recombinant DNA technology is on a par with that in the U.S. - there is no technology lead on either side. The author recommends that U.S. bio-researchers should read the Japanese language literature, particularly in applied areas, since the abstracts of meetings held in Japan in Japanese are a good source of current, concise information.

37303 (UCRL–52000-89-4) **Energy and Technology Review.** Poggio, A.J.; Mayall, B.H. (eds.). Lawrence Livermore National Lab., CA (USA). Apr 1989. 27p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE89013919/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The Lawrence Livermore National Laboratory (LLNL) is an acknowledged world center for analytical cytology. This leadership was recognized by the Regents of the University of California (UC), who in 1982 established and funded the Program for Analytical Cytology to facilitate the transfer of this technology from scientists at LLNL to their University colleagues, primarily through innovative collaborative research. This issue of Energy and Technology Review describes three of the forty projects that have been funded in this way; chosen to illustrate the potential medical application of the research. Analytical cytology is a relatively new field of biomedical research that is increasingly being applied in clinical medicine. It has been particularly important in unraveling the complexities of the human immune system and in quantifying the pathobiology of malignancy. Defined as the characterization and measurement of cells and cellular constituents for biological and medical purposes, analytical cytology bridges the gap between the quantitative discipline of molecular biology and the more qualitative disciplines of anatomy and pathology. It is itself multidisciplinary in nature. Two major approaches to analytical cytology are flow cytometry and image cytometry. In each of these research techniques, cells are measured one at a time in an automated device. In flow instruments, the cells are dispersed in fluid suspension and pass in single file through a beam of laser light to generate optical signals that are measured. In image cytometry, cells are dispersed on a slide and are imaged through a microscope onto an electronic imaging and analysis system that processes the cell image to extract measurements of interest.

37304 (CONF-8704370–, pp. 17-28) **Role of the bacterial host in the mechanism and regulation of Tn10 transposition.** Roberts, D. (Harvard Univ., Cambridge, MA (USA)); Morisato, D.; Kleckner, N. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Transposon Tn10 can promote a variety of genetic alterations in Escherichia coli, including insertion mutations, chromosomal deletions, and chromosomal rearrangements. The authors describe below several ways in which the occurrence of these Tn10- and IS10-promoted events is under control of the host cell. First, DNA methylation by the host enzyme dam methylase reduces transposase expression. Second, methylation prevents transposase action at inner termini. Third, host-DNA-binding proteins integration host factor (IHF) and/or hemagglutinating unit (HU) are necessary for transposase action at the outer termini. Finally, the authors present evidence that the host cell responds to transposition by induction of a λ prophage and hence, probably, the cellular SOS system.

37305 (CONF-8704370–, pp. 41-50) **Mobile DNA elements and spontaneous gene mutation.** Green, M.M. (Univ. of California, Davis (USA)). Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order

Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

The molecular genetic analysis of presumptive spontaneous mutations in Drosophila melanogaster demonstrates an inordinate fraction to be causally associated with inserts of mobile DNA elements. The operational definition of spontaneous mutation as an autonomous event is examined in the context of those genetical-environmental conditions that drive mobile DNA elements.

37306 (CONF-8704370–, pp. 51-62) **Molecular genetic studies of the mouse dilute locus: analysis of two dilute alleles and dilute-suppressor.** Strobel, M.C. (NCI-Frederick Cancer Research Facility, MD (USA)); Seperack, P.K.; Moore, K.J.; Copeland, N.G.; Jenkins, N.A. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

The original mouse dilute mutation (d) was identified solely by its variant coat color. However, most other d alleles manifest the additional phenotypes of neurological disorders and juvenile lethality. The over 200 alleles at the dilute locus provide a strong genetic basis for the molecular analysis, which will allow a correlation between these phenotypes and expression patterns of the genomic d locus. Initial studies have focused on two d mutations, the original d and a dilute-lethal allele, d^{120J}. The original d mutation, now termed dilute-viral or d^{v}, is causally associated with an ecotropic murine leukemia provirus, Emv-3, whereas the d^{120J} mutation is correlated with a small deletion. Analysis of germline and somatic d^{+} revertants of d^{v} has elucidated the probable mechanism by which proviral excision causes phenotypic reversion. Together, d^{v} and d^{120J} have provided molecular entree to the genomic d locus, allowing the initial identification of dilute transcripts. Finally, the effect of dilute-suppressor (dsu), an unlinked, semidominant mutation that suppresses the dilute coat color defect of d^{v}, on the d^{120J} allele has been examined. These studies have allowed a hypothesis to be drawn concerning the mechanism of suppression by dsu.

37307 (CONF-8704370–, pp. 103-114) **Concerted transposition in Drosophila melanogaster.** Tchurikov, N.A. (N.K. Koltsov Institute of Developmental Biology, Moscow (USSR)); Gerasimova, T.I.; Georgieva, S.G.; Mizrokhi, I.J.; Georgiev, P.G.; Ilyin, Y.V. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

The authors studied the molecular nature of mutations occurring during transposition explosions in Drosophila melanogaster. Besides mobile element excisions and long terminal repeat (LTR)-targeted reinsertions, deletion mutations of single-copy gene sequences and their reversions to the wild type were observed. The characteristic sets of mutation changes were shown to appear independently in certain strains. Such simultaneous multiple transposition events were demonstrated in the cut (ct) and white (w) loci. The possible mechanisms of the described events are discussed.

37308 (CONF-8704370–, pp. 123-130) **Molecular basis of transposable element-induced mutations in Drosophila melanogaster.** Geyer, P.K. (Johns Hopkins Univ., Baltimore, MD (USA)); Green, M.M.; Corces, V.G. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

In order to understand the mechanisms underlying the mutagenic effect of the gypsy transposable element, the authors carried out a detailed structural and functional analysis of the yellow (y) locus in wild-type flies, in the gypsy-induced allele y^{2}, and several phenotypic revertants. The complex pattern of temporal and spatial expression of the yellow gene is controlled by four distinct and independent regulatory elements. Sequence analysis of y^{2} revertants suggests that the phenotype of the gypsy-induced allele is not due to the integration of the transposon into regulatory sequences, or distancing of these sequences from the TATA box, but rather to the interaction between transcriptional regulatory elements located in gypsy and the yellow control regions responsible for the proper expression of this gene in the affected tissues.

37309 (CONF-8704370–, pp. 145-153) **Genes that affect Ty-mediated gene expression in yeast.** Winston, F. (Harvard Medical School, Boston, MA (USA)). Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Ty and solo δ insertion mutations in the 5' noncoding regions of genes in Saccharomyces cerevisiae can inhibit adjacent gene expression. Frequently, this occurs because transcription signals on the Ty or δ interfere with those of the adjacent gene. Trans-acting suppressors of Ty and δ insertion mutations are candidates for mutations in genes that encode transcription factors that are required for the function of Ty transcription signals. The authors have isolated and analyzed a large number of suppressors of Ty and δ insertion mutations and have identified eight new genes. Mutations in these genes alter transcription of genes adjacent to Ty and δ insertion mutations. In addition, they frequently cause other mutant phenotypes, suggesting that they may also be important for more general cellular functions.

37310 (CONF-8704370–, pp. 169-180) **Regulation of yeast Ty element transposition.** Boeke, J.D. (Johns Hopkins Univ. School of Medicine, Baltimore, MD (USA)); Eichinger, D.; Fink, G.R. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Yeast Ty elements transpose via a retrovirus-like mechanism. They are responsible for causing a variety of spontaneous mutations; systems in which the frequency of these events is greatly elevated are very useful for the study of the retrotransposition process. At least one gene, SPT3, encoded by yeast, regulates the transcription of, and hence the transposition of, Ty elements. During transposition, Ty element sequences apparently recombine with each other to generate hybrid elements. Such recombinational processes may be important in shuffling Ty promoters of various strengths in front of either functional or nonfunctional Ty coding sequences. The authors have analyzed the molecular nature of the defect in one such nonfunctional Ty element.

37311 (CONF-8704370–, pp. 209-216) **Structure of mutations induced by I-R hybrid dysgenesis in Drosophila melanogaster.** Finnegan, D.J. (King's Buildings, Edinburgh (England)); Busseau, I.; Lynch, M.; Fawcett, D.H.; Lister, C.K.; Pelisson, A.; Sang, H.M.; Bucheton, A. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Transposable elements with a sequence organization similar to that of I elements are found in a wide range of organisms. These include L1 elements in mammals, F and G elements in D. melanogaster, and an element called ingi found in the genome of Trypanosoma brucei. The Doc and jockey sequences of D. melanogaster may also be elements of this type. The authors have shown that I elements can cause mutations by inserting into genes and can be responsible for gross rearrangements of adjacent sequences. The frequency with which these events take place is low in I strains but is greatly increased when complete I factors are expressed at high levels under conditions of I-R hybrid dysgenesis. This raises the possibility that other elements of this type may produce similar genomic changes and that these might make a significant contribution to mutation frequencies if expression of functional elements were to be stimulated by outcrossing or other forms of genomic shock.

37312 (CONF-8704370–, pp. 219-234) **Evidence of host-mediated regulation of retroviral element expression at the posttranscriptional level.** McDonald, J.F. (Univ. of Georgia, Athens (USA)); Strand, D.J.; Brown, M.R.; Paskewitz, S.M.; Csink, A.K.; Voss, S.H. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

The authors study of copia, RSV, and HIV LTR expression in Drosophila, murine, and human cells, as well as their survey of copia tissue-specific expression over Drosophila development, suggest that a significant component of the host-mediated trans-regulatory control of retroviral element expression occurs on the posttranscriptional level. Interestingly, posttranscriptional regulation is emerging as an important component of eukaryotic gene expression in general. The developing consensus is that eukaryotic gene expression is a coordinated process, involving a complex of cell- and stage-specific factors that exert their regulatory effects at multiple levels. Since retroviral element expression appears to be mediated by pre-established, host-encoded regulatory networks, it is perhaps not surprising that the underlying molecular mechanisms also involve multiple levels of gene control.

37313 (CONF-8704370–, pp. 275-286) **DNA modification of Mu elements in maize.** Chandler, V.L. (Univ. of Oregon, Eugene (USA)). Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

The increased mutation rate in Mutator stocks of maize is associated with the transposition of Mu elements. The high mutation rate is heritable, although Mutator stocks occasionally lose their mutagenic activity. Southern blot analysis of Mu elements demonstrates a correlation between loss of activity and an inhibition of digestion of Mu elements by methylation-sensitive restriction enzymes. This modification is stable through several generations of out-crosses. Most stocks of maize are non-Mutator, yet they usually contain a few copies of intact Mu elements. The authors have characterized an intact Mul-like element from the non-Mutator line B37 that is identical to Mul, an element known to transpose in Mutator stocks. In B37 genomic DNA this element is modified such that certain methylation-sensitive restriction enzymes will not cut it. Modification of this element is lost when it is placed in an active Mutator stock by genetic crosses. They hypothesize that DNA modification of transposable elements may serve as a heritable, but potentially reversible, mechanism for regulating transposable elements. One source of genomic instability may be the liberation of transposable elements through the demethylation of cryptic elements.

37314 (CONF-8901130–1) **Genetics of early embryo survival.** Niswander, L.; Edstroem, J.E.; Rinchik, E.M.; Magnuson, T. Oak Ridge National Lab., TN (USA). 1989. 10p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From UCLA symposia on molecular and cellular biology: transgenic models in medicine and agriculture; Taos, NM, USA; 28 Jan - 3 feb 1989. Order Number DE89013053/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The albino-deletion complex represents one of the few regions of the mouse genome where a set of specific developmental defects are associated with a series of overlapping chromosomal deletions. A total of 37 deletions exist, all of which remove the region of mouse chromosome 7 that surrounds and includes the albino coat-color locus. The complementation patterns among these deletion chromosomes indicate that at least 9 distinct functional units exist in this region. Two of these units contain genes whose expression is required around the time the basic body plan is being established in the early postimplantation embryo. Embryos homozygous for the deletions that remove one of these units develop to day 8.5. Extensive development of the extraembryonic structures occurs, and the three primary germ layers form but there is no organization of mesoderm into somites or induction of the neural axis. Embryos homozygous for deletions that remove the second region, as well as the first, do not undergo gastrulation, and there is no development of the extraembryonic structures. 10 refs., 2 figs., 1 tab.

37315 (Juel–2249) **Construction of an expression vector for the gram-negative bacterium Zymomonas mobilis.** Reynen, M. Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Biotechnologie; Duesseldorf Univ. (Germany, F.R.). Dec 1988. 129p. (In German). Order Number DE89788398/JAW. Available from NTIS (US Sales Only), PC A07/MF A01.

The gram-negative bacterium Z.mobilis offers a considerable potential for industrial ethanol production. But till now, not a single commercially interesting process has been established, because of the limited substrate range of the organism. All attempts to enlarge the substrate range by means of molecular genetics failed. Reasons are, the small number of suitable vectors for Z.mobilis, the lack of a transformation system and the often poor expression of heterologous genes in this microorganism. In this work the Pyruvate Decarboxylase gene (pdc) originated from Z.mobilis ATCC29191 has been characterized and the promoter region was used for the construction of an expression vector for Z.mobilis.

37316 (IAEA-R–3695-F) **Israel EQAS for thyroid related hormones. Final report for the period June 1984 - February 1988.** Kahana, L. Carmel Hospital, Haifa (Israel). Inst. of Endocrinology; International Atomic Energy Agency, Vienna (Austria). Oct 1988. 35p. Order Number DE89618050/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

An External Quality Assessment Scheme (EQAS) for thyroxine (T_4), triiodothyronine (T_3) thyroid stimulating hormone (TSH) and free thyroxine (FT_4) radioimmunoassay (RIA) was operated in 36 laboratories. The 17 serum pools distributed covered analyte concentrations from subnormal to elevated values. Five of these were based on "zero analyte" pools artificially prepared by treatment with Amberlite. "Spiked" sera was used for recovery studies. Eleven pools were analyzed more than once. Abnormal, method dependent results with large interlaboratory variation was observed in the Amberlite treated pools. A "matrix effect' was suspected and the results excluded from analysis. The All Laboratory Trimmed Mean (ALTM) was stable to within 4% for each analyte and taken as target value. Overall recovery for T_3, T_4, and TSH was 101, 91, and 89 per cent. Laboratory performance was assessed from the bias of each result and the variability of bias (as CV of bias for each test), over one year. Performance has improved, especially for TSH, where median bias decreased to 1% from 39%. Percentage of laboratories with unacceptable performance fell from 79% to 32%. A trend towards increased use of IRMA for TSH and of F-T_4 was observed. However, F-T_4 results proved method dependent. TSH IRMA is suggested as the best supplementary test to T_4 for thyroid function testing. Refs, figs and tabs.

Voprosy atomnoj nauki i tekhniki.; no. 2.

The sources of interpretation deadlock arisen after mathematical treatment of a great number of liver radioisotope images are examined within a scheme proposed by authors. It turned out that in the framework of the rules currently in force for data interpretation all examined patients without exception should considered sick. This conclusion was rejected for many reasons including the lack of any evidences that the results of treatment are correct. The results obtained made it possible to reject the assumption about nonorgan nature of detected traces and thereby to reveal an excessive simplicity of the current rules of making diagnostic conclusion. 5 refs.; 12 figs.

37320 (ORNL/TM–11145) **Nuclear Medicine Program progress report for quarter ending December 31, 1988.** Knapp, F.F. Jr.; Ambrose, K.R.; Callahan, A.P.; McPherson, D.W.; Srivastava, P.C.; Allred, J.F.; Blystone, S.L.; Kropp, J.; Lisic, E.C.; Rice, D.E. Oak Ridge National Lab., TN (USA). Jun 1989. 13p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89013758/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A new project involving the development of production and processing technology for radionuclides of biomedical interest has been initiated in the Nuclear Medicine Program. This research supports the development of radioisotope production and processing technology and radionuclide generator systems to provide the technology required to make available radionuclides of biomedical interest. The principal focus is the evaluation of radioisotope reactor production modes, radiochemistry, and radioanalytical methods to provide radionuclides of high specific activity and radiochemical purity. This project complements the Nuclear Medicine and core Biomedical Radioisotope Technology Program which involves the design, development, and biological testing of new tissue-specific radiopharmaceuticals. The goal is to expand the capability at ORNL to produce medical radionuclides that are not commercially available using state-of-the-art technology. This project is not a production effort but a research and development activity to assess and solve problems associated with the production, processing, and availability of radionuclides of medical interest. The synthesis of 15-(p-iodophenyl)-3-R, S-methyl-3-hyroxypentadecanioc acid (3-hydroxy BMIPP) is also described in this report. Comparison of the chromatographic properties of the polar metabolite isolated rat hearts administered iodine-125 BMIPP have demonstrated it to be more polar than 3-hydroxy BMIPP.

37321 (PB–89-173579/XAB) **Radiology PRICER 2.0 subroutines for RADMAIN and RADPRICE. Software.** Kowaleski, R. Health Care Financing Administration, Baltimore, MD (USA). Bureau of Program Operations. 1 Apr 1989. mag ta Available from NTISCP T05.

Source tape is in the EBCDIC character set. This restricts preparation to 9 track, one-half inch tape only. Identify recording mode by specifying density only. For price at 6250 bpi density, call NTIS Computer Products. Price includes documentation, PB–89-173587.

RADMAIN is a driver program provided for installation testing of PRICER 2.0. The format of the tape accompanying the form is 6250-BPI, 9-track, standard-label multifile tape. The six files contained on the tape are: RADMAIN - Driver program - COBOL vs source code; RADPRICE - Radiology Pricing subroutine; RADPROV - COBOL vs source code - Providers with carriers and localities; RADHCPCS - Radiology HCPCS codes; RADPREV - Prevailing charges and Fee Schedule amounts for Radiology; BILL - Radiology Bill Test File. Software Description: The software is written in the COBOL language for use on IBM 3090-500E using XA operating system.

37322 (PB–89-173587/XAB) **Radiology PRICER 2.0 subroutine installation guide, Volume 1 and Volume 2.** Kowaleski, R. Health Care Financing Administration, Baltimore, MD (USA). Bureau of Program Operations. 1 Apr 1989. 94p. Available from NTIS, PC A05/MF A01.

For system on magnetic tape, see PB–89-173579.

Radiology pricing subroutine (PRICER 2.0) is furnished by the Health Care Financing Administration to process the payment of Outpatient Medicare claims with discharges on or after April 1, 1989. Volumes 1 and 2 contain the installation and operation guidelines necessary to install PRICER 2.0 in an IBM 3090 environment. The installation requires that the receiver be familiar with COBOL/VS, OS JCL, and that an interface module has been previously installed. The installation tape contains the program source code and data files necessary to completely install Radiology PRICER 2.0. Volume 2 contains Appendix A through G: Appendix A - RADMAIN (driver) source listing; Appendix B - RADPRICE source listing; Appendix C - listing of the Provider File; Appendix D - listing of the HCPCS Code File; Appendix E - listing of the Prevailing Charge/Fee Schedule File; Appendix F - listing of the bill test file; Appendix G - listing of the expected test results.

37324 (DOE/ER/13278–2) **Detection and characterization of novel metal-binding proteins: Final report.** Holmes, D.S.; Leib, T.K. General Electric Co., Schenectady, NY (USA). Corporate Research and Development Center. Dec 1988. 45p. Sponsored by DOE Energy Research. DOE Contract FG02-84ER13278. Order Number DE89013968/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The research proposed and carried out under this grant concerned the detection and characterization of novel metal-binding proteins. In particular, the research goals as outlined in the original proposal were to detect novel metalloproteins from unusual bacteria such as Thiobacillus and Sulfolobus, to characterize one or more such novel metal-binding proteins, and, as a long-range goal beyond the scope of the proposal, to explore the conditions necessary for an industrial or scientific application of metal-binding proteins and to determine its relative advantages and limitations for the proposed application. An important part of this research involved the development of techniques that would enable us to examine the proteins of bacteria for the presence of novel metal-binding proteins. Since many metal-binding proteins are rich in cysteine, we placed emphasis on techniques that would detect cysteine in proteins. While synthesizing metal-binding polypeptides for use as models in the examination of detection techniques, we initiated a study of synthetic metal-binding proteins. We have synthesized and

characterized a family of novel, artificial metal-binding proteins whose structure is based upon naturally occurring metallothionein. Metallothionein has two important properties that make it suitable for industrial applications: very high affinities for several metals including some heavy metals and strategic metals, and exquisite specificity of metal binding. In summary, with this grant we have initiated a study of novel metal-binding proteins and the sulfur-based chemistry that these proteins use to chelate metals. Although we were unsuccessful in detecting new metal-binding proteins in microorganisms, we were able to synthesize and characterize a family of novel, artificial metal-binding proteins whose structure is based upon naturally occurring metallothionein.

37325 (DOE/ER/13339–5) **Respiratory enzymes of Thiobacillus ferrooxidans: Progress report, March 1988–July 1989.** Robert Blake II. Meharry Medical Coll., Nashville (USA). Dept. of Biochemistry. 1989. 10p. Sponsored by DOE Energy Research. DOE Contract FG05-85ER13339. Order Number DE89011526/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Research is described in the following two areas: (1) purification and characterization of the acid stable cytochrome c in crude extracts of T. ferroxidans that catalyzes the Fe(II)-dependent reduction of rusticyanin; (2) purification of the rusticyanin- like proteins from Leptospirillum ferroxidans, and to conduct a spectrophotometric investigation of the electron transfer reactions between soluble iron and the purified protein. (CBS)

37326 (DOE/ER/60556–T1) **[Comparison of the activity of subsurface and surface microorganisms and their anaerobic transformation of heterocyclic compounds]: Progress report, July 1, 1987–June 30, 1989.** Pennsylvania State Univ., University Park, PA (USA). 1989. 14p. Sponsored by DOE Energy Research. DOE Contract FG02-87ER60556. Order Number DE89014435/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Two areas of research are reported on: (1) comparison of the activity of subsurface and surface microorganisms and their anaerobic transformation of heterocyclic compounds; and (2) determination of factors which affect anaerobic microbial activity in the deep subsurface (fourth hole of the Savannah River Plant). In relation to (1) above, experiments were conducted with indole, oxindole, and pyridine under methanogenic and denitrifying conditions. In relation to (2), aerobic and anaerobic conditions of degradation are discussed. (CBS)

37327 **Reexamination of the use of otolith nuclear dimensions to identify juvenile anadromous and nonanadromous rainbow trout, Salmo Gairdneri.** *Fishery Bulletin (USA),* 86(1): 160-163 (Jan 1988).

Otoliths are a potential source of taxonomic characteristics for identifying stocks of fish. Differences in dimensions of the otolith nucleus have provided a basis for separating winter from summer races of steelhead, anadromous rainbow trout, Salmo gairdneri. Consequently, to determine whether juveniles of the two forms could be distinguished by differences in dimensions of otolith nuclei, we measured the nuclei in sagittae from steelhead and resident rainbow trout collected from the same Deschutes River, Oregon, locations used by Rybock et al. (1975). We used the definitions proposed by Rybock et al. and by Neilson et al. (1985), and compared our measurements for the two forms with each other and with published values.

37328 (AD-A–205007/8/XAB) **Characterization of chemically tritiated microcystin-Lr and its distribution in mouse. Interim report.** Robinson, N.A.; Miura, G.A.; Matson, C.F.; Dinterman, R.E.; Pace, J.G. Army Medical Research Inst. of Infectious Diseases, Fort Detrick, MD (USA). 14 Feb 1989. 23p. Available from NTIS, PC A03/MF A01.

Chemically tritiated microcystin-LR (specific activity 194 mCi/mmol), purified to 95% by C-18 reverse-phase HPLC, exhibited the same retention time and ultraviolet absorption profile as unlabeled toxin. Acid-hydrolyzed ^3H toxin yielded tritiated glutamate and beta-methylasparate. Stability of the nonexchangeable ^3H toxin in saline and urine was 93% after 42 days stored at 22, 4, or -20 C. In blood the breakdown of toxin was temperature- and time-dependent (63% at 22 C, 28 days). Unlabled toxin was stable for 42 days stored at either 4 or -20 C in saline. The LD 50 (mouse, i.p.) of ^3H microcystin-LR & unlabeled toxin was the same (75 micrograms/kg 65-90 & 65 micrograms/kg 53-80, respectively). From 3-90 min after i.p. injection of 70 micrograms/kg (3)H microcystin-LR there was a slow absorption of toxin from the peritoneal cavity & efficient accumulation in liver. The elimination half-life of the plasma concentration curve was 29 min. Tritium distribution in tissue at death or 6 hr post injection was similar for all doses (13-101 ug/kg). At 101 micrograms/kg, liver contained 56 plus or minus 1%, intestine 7 plus or minus 1%, kidney 0.9 plus or minus 0.2% & carcass 10 plus or minus 1% of the injected dose. Heart, spleen, lung and skeletal muscle contained < 1% of the radiolabel.

37329 (CONF-8704370–, pp. 309-318) **HTLV-I, HIV, and human T cell growth.** Greene, W.C. (Duke Univ. School of Medicine, Durham, NC (USA)); Dukovich, M.; Wano, Y.; Siekevitz, M. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

The biological effects of human T-lymphotropic virus type I (HTLV-I) and human immunodeficiency virus (HIV) retroviral infection on interleukin 2 (IL-2) and IL-2 receptor gene expression in human CD4$^+$ T cells were studied. The HTLV-I-derived transactivator gene product (tat I), was shown to stimulate the cellular promoter regulating IL-2 receptor (Tac) gene expression and to provide one of the two mitogenic signals required for activation of the IL-2 promoter. In viable CD4$^+$T cells infected with HIV, this virus does not alter mitogen-induced IL-2 receptor gene expression but does markedly inhibit IL-2 gene activation. The lack of production of this growth factor, which is required for the growth of CD4$^+$ T cells, may contribute to the cytopathic effects of this retrovirus and play a role in the progressive depletion of the CD4$^+$ subset of T cells observed in AIDS. Additional studies of CD4$^+$ T cells latently infected with HIV have revealed that mitogenic activation of these cells triggers HIV gene replication. This response appears to reflect properties encoded by the viral long terminal repeat (LTR), as four different types of T-cell mitogens were shown to be capable of activating this viral element. Deletion analysis of the HIV LTR has permitted identification of important positive and negative regulatory sequences that modulate the overall level of viral gene expression following mitogen stimulation.

37330 (PB–89-168140/XAB) **Hazard Communication Project: reference manual.** Human Technology, Inc., McLean, VA (USA). Mar 1989. 201p. Available from NTIS, PC A10/MF A01.

For system on diskette, see PB–89-168132.

This reference manual covers the following course objectives: to inform employees of their employer's requirements under the OSHA Hazard Communication Standard (29 CFR 1910.1200); to instruct employees on the procedures for obtaining and using information on hazardous materials, including understanding labeling systems and the material safety data sheet (MSDS) information; to provide information on 11 classes of chemicals, including their common uses, potential physical and health hazards, detection methods, and safety measures to follow. There are 14 lessons, ranging in length from 30 minutes to 1 (one) hour. The lessons are contained on 6 disks that are programmed to run on an IBM-compatible PC with an EGA graphics card and monitor. The program will not run on monochrome or CGA systems.

37331 (PB–89-860191/XAB) **Lead: occupational health hazards. January 1970-April 1989 (Citations from the NTIS data base). Report for January 1970-April 1989.** National Technical Information Service, Springfield, VA (USA). Apr 1989. 45p. Available from NTISPC N01/MF N01.

This bibliography contains citations concerning the health hazards of working with lead containing material and processes. Health-hazard evaluations of lead exposure in industrial settings such as resource-recovery plants, iron foundries, lead-ore processing plants, mines, scrap-metal processing plants and yards, tanning facilities, and printing facilities are included. Clinical studies of worker exposure to lead are presented. Occupational Health and Safety Association lead standards are discussed with regard to abatement procedures for lead exposure in the workplace. (Contains 65 citations fully indexed and including a title list.)

37332 (PB–89-860621/XAB) **Lead pollution: public health hazards and environmental toxicity. January 1970-April 1989 (Citations from the NTIS data base). Report for January 1970-April 1989.** National Technical Information Service, Springfield, VA (USA). May 1989. 95p. Available from NTISPC N01/MF N01.

This bibliography contains citations concerning the effects of exposure to lead on public health and environmental toxicity of lead pollution. Environmental exposure to lead is discussed with relation to proximity to lead-processing facilities, roadways, industry that produces lead-contaminated emissions, lead-based paints , landfill leachates, and other anthropogenic sources. Toxicity of lead on both humans and natural ecosystems is included. Lead from automotive-fuel emissions and lead exposure in the workplace are discussed in separate bibliographies. (Contains 160 citations fully indexed and including a title list.)

37333 (CNIC–00139) **Study on residues and degradation of ^{14}C-phoxim in spring wheat plants and soil.** Zhu Shuxiu; Yin Lishang. China Nuclear Information Centre, Beijing, BJ (China). Jan 1988. 15p. (In Chinese). (A65-IAAE–0012). Order Number DE89613763/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

A potting experiment on residues and degradation of ^{14}C-phoxim in spring wheat plants and soil was conducted in 1984~1986. Seed dressing or soil mixing and spraying with ^{14}C-phoxim had been done at sowing and seedling stage respectively. The radioactivities of samples were detected on the low background (3cpm) GM or Backman LS 7800 liquid scintillation counter. The transmission, dissociation and residues of ^{14}C-phoxim in spring wheat plants and soil were investigated. The amount of ^{14}C-phoxim residues in the grains was determined. The dissipation of the residues of ^{14}C-phoxim after the harvesting of spring wheat plants were discussed; the residues could be decomposed into $^{14}CO_2$, dissolved in evaporated liquid and throwed into air, or stored in soil.

37334 (ORNL/FTR–2942) **[Radiological incidents, Tours, France, June 18–June 24, 1988]: Foreign trip report.** Hoffman, F.O. Oak Ridge National Lab., TN (USA). 5 Jul 1988. 7p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014059/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

At the request of the US Department of Energy (DOE) the traveler participated in a bilateral US/French conference on responses to radiological incidents. The meeting was held in Tours, France on June 20 through 23, 1988 at the Centre D Etudes Du Ripault, headquarters of the Commisariat Energie Atomique (CEA). The traveler presented a paper on the use of mathematical models for estimating the levels of radioactivity in foodstuffs subsequent to an accidental release that would require either restriction of human consumption or intervention to reduce or eliminate the potential for human exposure to radioactivity. The traveler reviewed the intervention levels that became effective during the Chernobyl accident as well as levels that have been recommended by the International Atomic Energy Agency (IAEA), the World Health Organization, the Commission of the European Communities, and the International Commission on Radiological Protection. These discussions stressed the importance of the political process under emergency situations whereby recommendations made by the authoritative scientific community may be ignored in favor of increased conservatism. The values presented by the French speakers as potential intervention levels were found to be a factor of 5 to 50 higher (i.e., less restrictive) than values proposed by international organizations. At the conclusion of the discussion topic on the derivation of intervention levels, the traveler proceeded to the IAEA in Vienna, where he completed revisions on a draft of a proposed IAEA Safety Series on "Procedures for Evaluating the Reliability of Predictions Made By Environmental Transfer Models."

37335 (ORNL/FTR–3043) **[International workshop on terrestrial field testing of pesticide, Cambridge, United Kingdom, September 11–16, 1988]: Foreign trip report.** Suter, G.W. II. Oak Ridge National Lab., TN (USA). 30 Sep 1988. 6p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014063/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The traveler attended a workshop on Terrestrial Field Testing of Pesticides and presented a paper on Risk Assessment Models. The workshop addressed the role of field testing in assessment and discussed procedures for testing. Environmental assessment problems are similar for pesticides and other chemicals, but such problems are accentuated for pesticides because of their high toxicity and the fact that these substances are applied at rates that are intended to be bioactive. The major issue of contention was the relative roles of laboratory testing, filed testing, and monitoring the effects of pesticide use.

37336 **Effects of ozone and simulated acid rain on mycorrhizal infection in two families of Pinus taeda L.** O'Neill, E.G. (Environmental Sciences Div., Oak Ridge National Lab., Oak Ridge, TN (US)); McLaughlin, S.B. *Bulletin of the Ecological Society of America (USA),* 68(3): 379-380 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

Twelve-week-old Pinus taeda seedlings from two families, mycorrhizal with Pisolithus tinctorius, were exposed to factorial combinations of simulated acid rain (pH = 3.5, 4.3, 5.0) and O_3 (charcoal-filtered air, ambient air plus 80 nL L^{-1} or 160 nL L^{-1} O_3) in open-top chambers from August to November 1986. Mycorrhizal infection was assessed before initiation of treatments and after 6 or 12 weeks of exposure by a visual estimate of the percent of short roots infected. The two families differed significantly ($P \leq 0.05$) in percent infection at all harvests; however, no interactions between family and O_3 occurred. No effects of rain pH were found. Mycorrhizal infection was significantly decreased in both O_3 treatments at the 12-week harvest. Changes in mycorrhizal infection through time are discussed relative to patterns of seedling root growth.

37337 **Long-term recovery of northern hardwood forest following gamma irradiation.** Murphy, P.G. (Michigan State Univ., East Lansing, MI (US)); Sharitz, R.R. *Bulletin of the Ecological Society of America (USA),* 68(3): 374 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

A northern Wisconsin hardwood forest was exposed to 3300 hours of point-source gamma irradiation from 3 May to 16 October, 1972. Cumulative exposure was approximately 55 kR at 10 m from the source. The abundance of tree species, by size class, was monitored over a 12 year period following irradiation. Within two years, the number of tree seedlings was reduced by more than 90% and all trees greater than 2.5 cm in diameter were eliminated, within 10 m of the radiation source. Subsequently, the establishment and growth of tree seedlings within 15 m of the source has been inhibited by the growth of heliophilic plants (up to 110 stems/m^2) of the genus Rubus. In the zone just beyond 15 m, a band of Corylus cornuta shrubs has developed. The few colonizing trees that have attained a diameter of 2.5 cm or more over the 12 year post-irradiation period are of successional species. Overall, patterns of forest recovery appear similar to those following other stresses.

37338 **Evaluating spatial patterns of forest productivity in a disturbed, mountainous landscape using LANDSAT data and a GIS.** Graham, R.L. (Oak Ridge National Lab., Oak Ridge, TN (US)); Iverson, L.R.; Cook, E.A. *Bulletin of the Ecological Society of America (USA),* 68(3): 314 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

An unsupervised classification of a LANDSAT Thematic Mapper (TM) scene of the Great Smoky Mountains National Park was done using all 7 spectral bands. The resulting TM class values for pixels ground-referenced to 128 forest productivity plots were extracted from the scene and paired with the plots' productivity values. The paired TM class/productivity values revealed significant differences in forest productivity between TM classes. On this basis the TM classes were reassigned to three productivity classes and a digitized forest productivity map of the entire TM scene generated. Using a Geographic Information System (GIS), this map was then overlaid with digitized topography and disturbance maps. Patterns of forest productivity were evaluated in reference to historic land disturbances and topography. Productivity information indices were calculated for each disturbance type.

37339 (AD-A–204823/9/XAB) **Resistance of bacterial spores to ultraviolet light.** Setlow, P. Connecticut Univ. Health Center, Farmington, CT (USA). Dept. of Biochemistry. 1988. 13p. Available from NTIS, PC A03/MF A01.

Pub. in Comments on Molecular and Cellular Biophysics, Vol. 5, No. 5, 253-264(1988).

Dormant spores of gram-positive bacteria, such as the various Bacillus species, usually are more resistant to killing by ultraviolet light than are growing cells. During the first minutes of spore germination, the spore's UV resistance rises significantly before dropping to the decreased value of the vegetative cell. For all strains of all species that have been tested, the spores are considerably more UV-resistant than their corresponding growing cells. Since the killing of cells or spores by UV-radiation is due to the presence of UV-induced photoproducts in DNA, there are two major factors that might be expected to influence UV resistance. (1) the UV photochemistry of the DNA in vivo, i.e., the type of photoproducts formed in DNA by UV radiation, the quantum efficiency of their formation, and their lethality; and (2) the efficiency of the repair or removal of these photoproducts. The DNA in the dormant spores has a different UV photochemistry than does the DNA in the growing cell, while the young germinated spore's DNA may exhibit a third type of UV photochemistry. There is at least one repair system which is specific for UV photoproducts produced in the dormant spore, as well as repair systems that act on UV photoproducts formed in other stages of growth.

37340 (CONF-8704370–, pp. 29-38) **SOS mutagenesis and replisome reactivation in bacteria: options acquired by transposition?.** Witkin, E.M. (Rutgers, The State Univ. of New Jersey, Piscataway (USA)); Roegner-Maniscalco, V. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

In Escherichia coli, mutagenesis by ultraviolet light (UV) and many carcinogenic chemicals requires the RecA and UmuDC proteins, which are induced by DNA damage as components of the survival-enhancing SOS response. The authors show that RecA and UmuDC can interact, at least functionally, not only in UV mutagenesis but also in induced replisome reactivation (IRR), a newly recognized SOS function required for recovery from inhibition of DNA synthesis caused by UV damage. The authors propose that error-prone translesion DNA replication is possible at every site of blocked replication, although it actually occurs only at sites that are refractory to accurate modes of repair or tolerance of UV damage. They discuss evidence that umuDC and at least one of its plasmid-borne analogs, mucAB on plasmid pKM101, are (or once were) carried on transposons, and that SOS mutability (and possibly enhanced replisome reactivation activity) may be gained or lost by transposition.

37341 (CONF-8704370–, pp. 195-208) **Mutation induction by MR(P) and its modification by various conditions.** Sobels, F.H. (Univ. of Leiden (Netherlands)); Eeken, J.C.J. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Findings obtained in their laboratory over the last eight years on the induction of mutations by transposition of P elements under the influence of male or meiotic recombination (MR) are reviewed: (1) Localization of 144 MR-h12-induced lethals showed differences with the distribution of X-ray-induced lethals and with those arising spontaneously in the absence of MR. In situ hybridization provided evidence that MR-induced mutation is associated with transposition of P elements. (2) The effect of mutagens was studied by employing reversion of an MR-induced singed (sn) mutation by excision of the P element. This process was not noticeably affected by exposure to high mutagenic concentrations of ethylnitrosourea (ENU), methylmethanesulfonate (MMS), formaldehyde, and X-irradiation. (3) Under conditions of defective DNA repair as with mei-9 and mei-41, the frequency of forward mutations to sn and raspberry (ras) is enhanced, but reversion of sn is decreased. (4) A synergistic effect between MR and X rays was observed for the induction of recessive lethals. (5) From experiments in which the segregation of MR could be followed after having produced a mutation, it could be concluded that, after this event, MR retains its capacity to produce reverse mutations. (6) A molecular analysis of geographically different MR strains characterized by different potency to produce reverse mutations shows correlation of this property and the number of P elements present. (7) Following both heat and cold treatments, some enhancement of the frequency of reversion of different insertion element mutations was observed.

37342 (CONF-8704370–, pp. 319-336) **Mobile genetic elements, spontaneous mutations, and the assessment of genetic radiation hazards in man.** Sankaranarayanan, K. (State Univ. of Leiden (Netherlands)). Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Studies during the past 20 years have amply documented the existence of mobile genetic elements (MGEs) and the significant role they play in the genesis of spontaneous mutations in a number of eukaryotes. Furthermore, some of the dispersed repetitive DNA sequences present in mammalian (including human) genomes are thought to represent putative MGEs on the basis of their molecular structural similarities to the authentic MGEs in other organisms. However, at present, data that bear on spontaneous mutational effects of insertion of MGEs and on the question of whether MGEs can be induced to become mobile by radiation exposures are very limited in these species. The aims of this paper are (1) to briefly review some of the important properties of eukaryotic MGEs, including genetic effects caused by these and the effects of mutagens; (2) to examine the possible consequences of mobility of MGEs in the human genome and the probable reasons for our inability to detect MGE-mediated spontaneous mutations in man; (3) to consider the relevance of this analysis in the context of the estimation of genetic risks to man associated with exposures to ionizing radiation; and finally, (4) to present some views on where to seek evidence for MGE-mediated mutational effects in man.

37343 (CONF-8905157–1) **Risk assessment and late effects of radiation in low-earth orbits.** Fry, R.J.M. Oak Ridge National Lab., TN (USA). 1989. 15p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From Symposium on radiation hazards in space and biological consequences; Washington, DC, USA; 11 May 1989. Order Number DE89013043/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The radiation dose rates in low-earth orbits are dependent on the altitude and orbital inclination. The doses to which the crews of space vehicles are exposed is governed by the duration of the mission and the shielding, and in low-earth orbit missions protons are the dominant particles encountered. The risk of concern with the low dose rates and the relatively low total doses of radiation that will be incurred on the space station is excess cancer. The National Council on Radiation Protection and Measurements has recently recommended career dose-equivalent limits that take into account sex and age. The new recommendations for career limits range from 1.0 Sv to 4 Sv, depending on sex and on the age at the time of their first space mission, compared to a single career limit of 4.0 Sv previously used by NASA. Risk estimates for radiated-induced cancer are evolving and changes in the current guidance may be required in the next few years. 10 refs., 1 fig., 3 tabs.

37344 (CONF-8906137–1) **Chemical and nuclear emergencies: Interchanging lessons learned from planning and accident experience.** Adler, V.; Sorensen, J.H.; Rogers, G.O. Oak Ridge National Lab., TN (USA). 1989. 14p. DOE Contract AC05-84OR21400. From Joint NEA/CEC workshop on technical aspects of emergency planning; Brussels, Belgium; 27-29 Jun 1989. Order Number DE89013006/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Because the goal of emergency preparedness for both chemical and nuclear hazards is to reduce human exposure to hazardous materials, this paper examines the interchange of lessons learned from emergency planning and accident experience in both industries. While the concerns are slightly different, sufficient similarity is found for each to draw implications from the others experience. Principally the chemical industry can learn from the dominant planning experience associated with nuclear power plants, while the nuclear industry can chiefly learn from the chemical industry's accident experience. 23 refs.

37345 (CONF-8906140–1) **An update on standards for radiation in the environment and associated estimates of risk.** Kocher, D.C. Oak Ridge National Lab., TN (USA). 21 Jun 1989. 54p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From Health Physics Society summer school; Santa Fe, NM, USA; 19-23 Jun 1989. Order Number DE89013704/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

This presentation reviews current and proposed standards, recommendations, and guidances for limiting routine radiation exposures of the public, and estimates the risk corresponding to standards, recommendations, and guidances. These estimates provide a common basis for comparing different criteria for limiting public exposures to radiation, as well as hazardous chemicals.

37346 (INIS-mf–11440, pp. 580-581) **Evaluation of human internal irradiation owed to Cs-134 and Cs-137 from food after 26.04.1986.** Chiosila, I. (Spitalul Fundeni, Bucharest (Romania)); Chirovici, M.; Reviu, E. Central Inst. of Physics, Bucharest (Romania). 1988. (In Romanian). (CONF-8810372–: Advances in physics, Constanta, Romania, 6-8 Oct 1988). In *Advances in Physics.* Order Number DE89012158/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Irradiation doses received by man following ingestion of food contaminated with Cs-134 and Cs-137 are presented. (authors).

37347 (INIS-mf–11448) **Conference handbook.** Australian Inst. of Nuclear Science and Engineering, Lucas Heights (Australia). 1987. 54p. (CONF-8708339–: 11. AINSE radiation biology conference, Lucas Heights, Australia, 24-25 Aug 1987). Order Number DE89616297/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

Topics covered by the conference include food irradiation, mutagenesis, mammalian radiation biology, biological and physical dosimetry and radiation responses in nuclear medicine.

37348 (INIS-mf–11448, pp. 42) **Samarium 153 chelate localization in malignant melanoma.** Webb, J. (Freemantle Hospital (Australia)); Witt, B.C. de; Sorby, P.; Boyd, R.E.; Martindale, A.A. Australian Inst. of Nuclear Science and Engineering, Lucas Heights (Australia). 1987. (CONF-8708339–: 11. AINSE radiation biology conference, Lucas Heights, Australia, 24-25 Aug 1987). In *Conference handbook.* Order Number DE89616297/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

SAMARIUM 153/melanomas; BIOLOGICAL LOCALIZATION; CHELATES; MELANOMAS; UPTAKE

37349 (INIS-mf–11448, pp. 22) **Ionising radiation and its application to biotechnology.** Williams, J.H. (La Trobe Univ., Bundoora (Australia). Dept. of Microbiology); MacPhee, D.G. Australian Inst. of Nuclear Science and Engineering, Lucas Heights (Australia). 1987. (CONF-8708339–: 11. AINSE radiation biology conference, Lucas Heights, Australia, 24-25 Aug 1987). FROGS/biological radiation effects; FASTING; FROGS; IRRADIATION; LARVAE; OXYGEN; RADIATION DOSES; UPTAKE

37355 (INIS-mf-11984) **Radiation injuries of the intestine, treated in the Surgical Department of Wuerzburg University Hospital between 1974 and 1982.** Ho, H.V. Wuerzburg Univ. (Germany, F.R.). Medizinische Fakultaet. 14 Feb 1985. 49p. (In German). Order Number DE89788317/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The study was based on record sheets of patients operated for radiation injuries of the small and/or large intestine at any time during the period between 1974 and 1982. The available hospital data on radiation injuries and their treatment were reviewed and, the pertinent pathological substrate being well-known, analysed with the aim to evaluate the various surgical options.

37356 (INIS-SU–82, pp. 47-50) **On thorium and plutonium cocrystallization with calcium oxalate.** Basalaeva, L.N.; Bekyasheva, T.A.; Popov, D.K. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Study of possibility of ^{239}Pu and ^{234}Th concentration from bone ashe (calcium phosphate) hydrochloric acid solutions by coprecipitation with nonisotopic medium (CaC_2O_4) for their further radiometry or alpha-spectrometry is carried out. Thorium and plutonium distribution coefficients in calcium oxalate precipitate - solution system, as well as coefficients of Th and Pu cocrystallization with CaC_2O_4 and cocrystallization type are determined. Possibility of Pu and Th concentration from bone tissue solutions is demonstrated on small oxalate amount containing 25% of Ca total amount in bone tissue. 3 refs.; 2 tabs.

37357 (INIS-SU–82, pp. 59-63) **Interconnection of individual peculiarities of blood system with radiation syndrome severity in animals.** Kulikova, S.B.; Voevodina, T.M. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

To establish interconnection between initial blood indices and radiation syndrome severity experiments on rats of the same sex, age and breeding conditions were carried out. The obtained data permitted to suppose that even in one sex some organism features, reflecting in initial peripheric blood indices, have an effect on acute radiation syndrome process. 10 refs.; 3 tabs.

37358 (INIS-SU–82, pp. 67-69) **Dependence of reproduction indices of female mice on their age under the effect of fractionated irradiation.** Bazyukina, M.A. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Radiosensitivity of reproduction of different age female mice subjected to fractionated irradiation before or after conception is compared. It is stated that low dose fractionated irradiation in older age female mice suppresses reproductive function: a tendency to fertility decrease, disturbance of genetic activity in part of animals, progeny decrease are detected. In young female mice similar irradiation doesn't cause the above-mentioned consequences. 4 refs.; 1 tab.

37359 (INIS-SU–82, pp. 69-73) **Experimental model of radiation injuries of liver.** Merkushev, G.N. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

In experiments on rats it is shown that hepatectomy causes changes in all systems of intracellular supply, first of all in membranocomplexes relating to protein energy metabolism and synthesis. Phase response of these changes is in accordance with development of destructive and proliferative periods of reparation process. Irradiation results in break of rhythm of phase structural changes and metabolism of regenerating liver. Analysis of the data given permits to conclude that for regenerating liver radioprotection is more necessary than for intact one, but to study radioprotective means they can be tested on both intact and regenerating liver. 7 refs.; 1 tab.

37360 (INIS-SU–82, pp. 74-79) **Formation and prevention of destructive changes in mucous membranes of stomach of irradiated rats.** Ponomareva, T.V.; Artamonova, E.A. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

In experiments on rats prophylactic effect of medicinal preparations with different mechanism of action, e. g. tranquilizers, antihistaminic means and radioprotectors is studied and compared. It is stated that some medicinal preparations usually used in treating stomach peptic ulcer may also have prophylactic effect preventing development of stomach destructive changes caused by stress. Cymetidine is the most effective for this purpose. Gammaphos didn't have radioprotective effect on stomach. 13 refs.; 2 tabs.

37361 (INIS-SU–82, pp. 86-91) **Comparative radiosensitivity of oocytes of various stages of maturity.** Strel'nikova, N.K.; Vislenko, O.V. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Radiosensitivity of oocytes of various stages of maturity during local low dose irradiation of mice gonads was studied. It is shown that in case of whole-body and local high dose and low dose irradiation the most radiosensitive are oocytes in follicles of those stages of maturity that correspond to maximum cyclic neurohormonal changes in female organism. It permits to suppose that changes of neuroendocrinal regulation of reproduction process form the basis for increased radiosensitivity of reproduction in irradiated female mice. 6 refs.; 2 tabs.

37362 (INIS-SU–82, pp. 29-32) **Substantiation of rate setting of surface contamination with amino acids, labelled with tritium.** Zhesko, T.V. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

For rate setting of surface contamination with the wide-spread biogenic tritium compounds-protein predecessors-experimental study of skin absorption and skin deposit of amino acids labelled with tritium is carried out on rats. While extrapolating data to people and calculating tolerable skin contamination with ^{3}H- amino acids, it is supposed that people arm skin, 100-500 cm^2, has no defects and that the skin surface decontamination after radionuclide contact is carried out with a preparation, efficiency of which is not less than 97%. The value of tolerable skin absorption of tritium amino acids, being 110-550 MBq/year or 4.8 kBq/cm^2 per one working day, is calculated. 8 refs.; 1 tab.

37363 (INIS-SU–82, pp. 38-41) **On the effect of iron on plutonium metabolic mechanism in liver tissue.** Shvydko, N.S.; Rushonik, S.I. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

To determine plutonium metabolic mechanism in blood-lever system and in the liver tissue, the effect of iron on these processes, kinetics of radionuclide distribution in the liver and its fractions in animals that intook only plutonium (control group) and plutonium and per os iron (test group) was compared. It is stated that under iron effect increased plutonium content is deposited in the liver during all examination period. Therewith, maximum plutonium content is observed in the period from 6 to 24 hours (37 and 30% in comparison with 14 and 19% in control group). Later on decrease of plutonium content is observed, but in liver of rats incorporating iron plutonium

content is 1.5 times higher than in control group. Ferritine effect on plutonium metabolic mechanism in liver is discussed. 7 refs.; 1 tab.

37364 (INIS-SU–82, pp. 41-44) **^{210}Po incorporation to the structure of sulfurcontaining aminoacids.** Ponikarova, T.M. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Possibilities of ^{210}Po incorporation to methionine structure are ascertained on plants and white laboratory rats. Analysis of results obtained in experiments with ^{35}S shows that methionine synthesis during plant growth begins already in root system. Pecrystallization results testify to the fact that ^{210}Po, being sulfur analogue, substitutes it in synthesis for plants of sulfur containing aminoacids, forming methionine- and cystine-like compounds. When analysing possbility of ^{210}Po incorporation to methionine structure in animal body it is stated that ^{210}Po incorporates to molecule structure during aminoacid synthesis. It is supposed that in animals and man organism ^{210}Po forms, primarily, protein complexes. 5 refs.; 1 tab.

37365 (INIS-SU–82, pp. 44-47) **Effect of change in diet on excretion of plutonium-239 from organism.** Ivanova, N.P. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

To check supposition on milk effect on plutonium-239 excretion from organism the portable water for rats, contained in individual metabolic cages permitting separate excretion analysis, was replaced by milk. Some days later milk was excluded from diet. 24-hourly rate of radionuclide with feces and urine excretion from organism was determined. On the basis of preliminary data analysis it is supposed that interaction of some milk components with biocomponents of blood and deposition organ tissues violate ^{239}Pu steady equilibrium distribution in organism, affecting its metabolism through the intermediary of blood system. It results in increased plutonium excretion. 2 refs.; 1 tab.

37366 (INIS-SU–82, pp. 63-67) **Some questions of blastomogenic effect of internal irradiation on mammary gland.** Rusanova, O.V. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

On the basis of numerous data incorporated radionuclide effect on mammary gland is generalized. Importance of dose, dose rate, fractionation, effect of low dose beta irradiation from ^{3}H, ^{14}C and ^{35}S sources, their comparative carcinogenesis are discussed. The age modifying effect on neoplasms, as well as effect of morphofunctional mammary gland changes relating to different biological stages of organism and in lactation period are taken account of. 18 refs.

37367 (INIS-SU–82, pp. 80-83) **Biological effects of ^{137}Cs, incorporated into organism of rats.** Monakhov, A.S.; Strekalov, S.A.; Sokolov, A.V.; Aver'yanova, T.K. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Results of investigating mutagenous and hemotoxic effects of ^{137}Cs on blood lymphocytes of rats are presented. ^{137}Cs was orally administrated into organism of rats as 270 kBq/g chloride solution. ^{137}Cs mutagenous effect was studied on metaphase plates of rat blood lymphocytes in course of rats lifetime experiment. It is stated that ^{137}Cs inducing severe disturbances of genetic material in a great quantity of blood lymphocytes, causes their total killing. 5 refs.; 2 tabs.

37368 (INIS-SU–82, pp. 83-86) **Radiobiological effects of fractionated intake of ^{3}H-nucleosides by mammalian organism.** Chetchueva, M.Eh. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Results of experimental study of fractionated intake of ^{3}H-TgP and ^{3}H-TsdP by mice organism are presented. As biological tests changes of testic mass and frequency of dominant lethal mutations (DLM) were chosen. Authetic difference in changes of testis mass indices was observed after a single, three-time and ten-time administration of ^{3}H-DgP to animal organism. During 10-time ^{3}H-TsdP incorporation 2.2 times as many cells died than in single intake of equal tritium activity. Similar result is obtained in experiment carried out according DLM technique. Necessity of accounting results of fractionated intake of tritium by mice organism in extrapolation to people is pointed out. 3 refs.; 2 tabs.

37369 (INIS-SU–82, pp. 91-94) **Dependence of animal life span shortening on dose rates in case of internal irradiation.** Borisova, V.V. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A05/MF A01; INIS.

Shortening of animal life span depending on a single and daily intake of ^{137}Cs and ^{90}Sr is studied. It is shown that both with chronic and single intake of the given radionuclides the effect/dose dependence by the animal death criterion is of S-type character. At the same time, the definite peculiarities in the animal death kinetics depending on the amount of nuclide intake and, consequently, on the dose rate, are pointed out. These peculiarities are defined by both differences in the fife span and animal death causes. When introducing comparatively small amounts of ^{90}Sr the animal life span was longer and they died of nonspecific diseases relating to loss of general resistence of organism. In death pathogenesis of animal, that had higher doses of ^{90}Sr, specific radiation injuries, caused by direct radiation effect, made a significant contribution. 3 refs.; 2 tabs.

37370 (INIS-SU–82, pp. 50-59) **New aspects in studying the effect of low dose ionizing radiations.** Troitskaya, M.N. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

On the basis of literary data biological effect of low dose irradiation on organism is analysed. Effect of natural background on development of living organisms, stimulating and carcinogenic effect of low dose irradiation are discussed. Discussion data on possible threshold radiation effect, as well as investigations in determining death hazard because of neoplasms in a-bomb survivors of Hirosima and Nagasaki are presented. Possibility of developing dose-effect relationships mathematical models is discussed. 31 refs.

37371 (INIS-SU–82, pp. 145-148) **Morphological content of rat peripheral blood in combined effect of radiation factors.** Yakovleva, N.G. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Combined effect of two radiation factors: a single x-irradiation and internal irradiation due to chronic intake of ^{90}Sr and ^{144}Ce radionuclides, on blood morphology is studied. In combined effect of radiation factors on morphological blood content 3 periods are distinguished. In the first period the blood changes correspond to an acute radiation injury without severe consequences. The second normalization period was muck shorter than in case of external irradiation alone. In the third period external preirradiation was complicated by aftereffects of long-term ^{90}Sr and ^{144}Ce radionuclide intake. The experiment have shown that combined radiation delayed effects result in deep shifts in morphology of rat peripheral blood. 4 refs.; 2 tabs.

37372 (INIS-SU–82, pp. 103-106) **Combined effect of incorporated ^{90}Sr, alcohol, and tobacco smokes on reproduction of warm-blooded animals.** Mashneva, N.I. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Combined effect of incorporated ^{90}Sr, ethanol, tobacco smokes on reproduction of warm-blooded animals is studied. It is shown that chronic intake of strontium 90, ethanol and tobacco smokes suppresses the reproduction of animals. But difficulty of obtained data extrapolation to a human being is not a sufficient ground for revising existing hygienic standards for persons being in contact with ionizing radiation and habitual to alcohol and smoking. Nevertheless, they permit to set a problem on negative effect of such habits. 7 refs.; 1 tab.

37373 (INIS-SU–82, pp. 110-114) **Effect of Sr^{90} and ethanol on work ability in case of combined and separate action of these factors.** Pul'kov, V.N. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Effect of ^{90}Sr and ethanol on workability of white mice males in long-term experiment is studied. It is shown that dynamic workability is decreased to a greater extent at ^{90}Sr effect than at ethanol one. The data on predominance of the effects of combined action of these factors are obtained. Differences in time regularities of dose-effect dependence for the studied factors make it difficult to get a unique answer to the question about the character of combined action. By most factors a slight increase of combined radionuclide and ethanol effect in the end of experiment, as well as accelerated decrease of muscular work, are detected. Lower radionuclide doses hat no effect on the value of combined action that is totally referred to ethanol action. 3 refs.; 3 tabs.

37374 (INIS-SU–82, pp. 106-110) **Combined effect of internal irradiation, alcohol and smoking on some immunological indices.** Shubik, V.M. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

It is shown that chronic intake of 0.21 kBq/g ^{210}Po per day by laboratory animals after three months of experiment results in increase of autoantibody concentration to hepatic tissue and circulating immune complexes (CIC). Combined effect of radionuclide with ethanol or tobacco smokes didn't result in increase of autoantibody and CIC concentration independent of ^{210}Po concentration in experiments. During combined single chronic effect of radionuclide, ethanol and tobacco smokes considerable increase of autoantibody titers, particularly to hepatic tissue, as compared to mice, which intake of these components was separate, was detected. The results rermit to suppose on additive action of ^{210}Po, alcohol and tobacco smokes in case of their chronic effect on the boDy of laboratory animals. 4 refs.; 1 tab.

37375 (INIS-SU–82, pp. 157-161) **Modeling of combined effect of alcohol, tobacco smokes and internal irradiation of laboratory animals.** Sukal'skaya, S.Ya. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Concentration of ^{90}Sr and ^{20}Po in kidneys and bone tissues was measured both separately and in combination with ethanol introduction. Carbon oxide (CO), which content was measured by a gas analyser, served as an index of tobacco smokes in a chamber with test animals. It is shown that ethanol had no noticeable effect either on the character or the levels of radionuclide accumulation in kidneys and bone tissues. Under experimental conditions quantitative characteristics of studied factors (intensity, the effect time and levels) remained stable within the specified limits independent on their combination. 6 refs.

37376 (ISH–123) **Biological indicators for giving proof of exposure to ionizing radiation - lectin coupling to human blood cells possibly a 'biological dosemeter'?.** Schreiber, G.A.; Spiegelberg, A.; Boegl, K.W.; Willich, N. Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene. Jun 1988. 134p. (In German). Available from Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene.

The present study has been conducted in an attempt to quantify radiation-induced changes in oligosaccharides of the cell membrane of human blood cells. The purpose of this study was to estimate the dose to the body based on the measured changes in lectin binding capacities. The lectin coupling system has been described as a dosimetric system. Statistically the different blood cell types showed different degrees of radiation sensitivity which was demonstrated by increased lectin binding. The method was intended to be optimized so as to enable dose assessments for individuals as well. In addition to the described method which is based on the use of tritium-labelled concanavalin A, two other radiological methods - i.e. BSA-separation and cell-harvester-separation - were tested for their suitability. However, the radiological methods enabled neither the above mentioned differences in radiosensitivity to be confirmed nor a sufficient amount of reproducible results in blood samples of healthy donors after in vitro irradiation to be obtained. Using fluorescence-labelled concanavalin A and wheat germ agglutinin, flow cytometric measurements of fluorescence intensity yielded the reproducible result of enhanced lectin binding to platelets, lymphocytes and monocytes in the dose range of 0,5 to 5 Gy after in vitro irradiation. Differences in radiosensitivity could not be detected with this method. Therefore on the model 'radiation therapy patient' the suitability of lectin coupling as a 'biological dosemeter' could not be demonstrated.

37377 (KIYI–88-23) **Intensity of DNA synthesis in immunocompetent organs of animals in early periods after neutron irradiation with different energy values.** AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. 28p. (In Russian). Order Number DE89012162/JAW. Available from NTIS (US Sales Only), PC A03/MF A01; INIS.

Individual papers in scope for the data base are processed separately.

37378 (KIYI–88-23, pp. 3-13) **DNA exchange in mice spleen at early periods following fast neutron irradiation with different energy rate.** Indyk, V.M.; Antonenko, G.I.; Parnovskaya, N.V. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). In *Intensity of DNA synthesis in immunocompetent organs of animals in early periods after neutron irradiation with different energy values.* Order Number DE89012162/JAW. Available from NTIS (US Sales Only), PC A03/MF A01; INIS.

The DNA-synthesis in spleen of animals at early periods following fast neutron irradiation with average energy of 22 MeV produced in the reaction d/50 MeV/-> Be as compared to fission spectrum neutrons (E~1.2 MeV) is investigated. ^{60}Co γ-quanta are used as standard radiation. It is shown that the rate of mass recovery of organs, their cellular nature, DNA content and indices of its specific activity have dose and time dependences, as well as they considerably differ at different neutron energy values and different quality radiation. With the increase of neutron energy their biological activity decreases. 9 refs.; 3 figs.; 2 tabs.

37379 (KIYI–88-23, pp. 14-26) **DNA biosynthesis content and intensiveness in mice thymus at early periods following fast neutron irradiation with different energy rate.** Indyk, V.M.; Antonenko, G.I.; Parnovskaya, N.V. AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Yadernykh Issledovanij. 1988. (In Russian). In *Intensity of DNA synthesis in immuno-competent organs of animals in early periods after neutron irradiation with different energy values.* Order Number DE89012162/JAW. Available from NTIS (US Sales Only), PC A03/MF A01; INIS.

Biosynthesis of dna of the thymic glands of animals irradiated by fast neutrons with different energy values in the early post-irradiation period is investigated. It is shown that the rate of mass recovery in organs, their cellular nature, dna content and indices of their specific activity have the dose and time dependences, as well as they considerably differ at different neutron energies and different quality radiation. With the increase of neutron energy value their biological effectiveness decreases. 18 refs.; 3 figs.; 2 tabs.

37380 (NUREG/CR–4214-Rev.1-Pt.2) **Health effects models for nuclear power plant accident consequence analysis: Low LET radiation: Part 2, Scientific bases for health effects models.** Abrahamson, S.; Bender, M.; Book, S.; Buncher, C.; Denniston,

C.; Gilbert, E.; Hahn, F.; Hertzberg, V.; Maxon, H.; Scott, B. Nuclear Regulatory Commission, Washington, DC (USA). Div. of Regulatory Applications; Sandia National Labs., Albuquerque, NM (USA). May 1989. 316p. Sponsored by Nuclear Regulatory Commission. DOE Contract AC04-76DP00789. (SAND–85-7185-Rev.1-Pt.2). Available from NTIS, PC A14/MF A01 - GPO - OSTI.

This report provides dose-response models intended to be used in estimating the radiological health effects of nuclear power plant accidents. Models of early and continuing effects, cancers and thyroid nodules, and genetic effects are provided. Two-parameter Weibull hazard functions are recommended for estimating the risks of early and continuing health effects. Three potentially lethal early effects – the hematopoietic, pulmonary and gastrointestinal syndromes – are considered. Linear and linear-quadratic models are recommended for estimating cancer risks. Parameters are given for analyzing the risks of seven types of cancer in adults – leukemia, bone, lung, breast, gastrointestinal, thyroid and "other". The category, "other" cancers, is intended to reflect the combined risks of multiple myeloma, lymphoma, and cancers of the bladder, kidney, brain, ovary, uterus and cervix. Models of childhood cancers due to in utero exposure are also provided. For most cancers, both incidence and mortality are addressed. Linear and linear-quadratic models are also recommended for assessing genetic risks. Five classes of genetic disease – dominant, x-linked, aneuploidy, unbalanced translocation and multifactorial diseases –are considered. In addition, the impact of radiation-induced genetic damage on the incidence of peri-implantation embryo losses is discussed. The uncertainty in modeling radiological health risks is addressed by providing central, upper, and lower estimates of all model parameters. Data are provided which should enable analysts to consider the timing and severity of each type of health risk. 22 refs., 14 figs., 51 tabs.

37381 (ORNL/TM–10569) **Radiation exposure inside reinforced concrete buildings at Nagasaki.** Rhoades, W.A.; Childs, R.L.; Ingersoll, D.T. Oak Ridge National Lab., TN (USA). May 1989. 177p. Sponsored by Department of Defense. DOE Contract AC05-84OR21400. Order Number DE89013765/JAW. Available from NTIS, PC A09/MF A01 - OSTI; GPO Dep.

The biological effects on the residents of Hiroshima and Nagasaki due to initial-irradiation exposure during the nuclear attacks of World War II was recognized immediately as an important source of information. After the war, an extensive effort gathered data concerning the locations of individuals at the time of the attack and their subsequent medical histories. The data from personnel located in reinforced concrete buildings are particularly significant, since large groups of occupants received radiation injury without complications due to blast and thermal effects. In order to correlate the radiation dose with physiological effects, the dose to each individual must be calculated. Enough information about the construction of the buildings was available after the war to allow a radiation transport model to be constructed, but the accurate calculation of penetration into such large, thick-walled three dimensional structures was beyond the scope of computing technology until recently. Now, the availability of Cray vector computers and the development of a specially-constructed discrete ordinates transport code, TORT, have combined to allow the successful completion of such a study. This document describes the radiation transport calculations and tabulates the resulting doses by source component and individual case location. An extensive uncertainty analysis is also included. These data are to be used in another study as input to a formal statistical analysis, resulting in a new value for the LD50 dose, i.e., the dose at which the mortality risk is 50%. 55 refs., 67 figs., 70 tabs.

37382 (PNL–6450-20-HEDR) **Hanford Environmental Dose Reconstruction Project: Monthly report.** Dennis, B.S. Pacific Northwest Lab., Richland, WA (USA). Jun 1989. 48p. Sponsored by DOE Defense Programs. DOE Contract AC06-76RL01830. Order Number DE89014546/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The project is divided into the technical tasks that address each of the primary steps in the path from radioactive releases to dose estimates. These include source terms; environmental transport; environmental monitoring data; demographics, agriculture, and food habits; and environmental pathways and dose estimates. The source terms task will develop estimates of radioactive emissions from Hanford facilities since 1944. These estimates will be based on historical measurements and production information. The environmental transport task will reconstruct the movement of radioactive materials from the areas of release to populations. Movement via the atmosphere, surface water (Columbia River), and ground water will be studied.

37383 (PNL–6822) **Life-span effects of ionizing radiation in the beagle dog: A summary account of four decades of research funded by the US Department of Energy and its predecessor agencies.** Thompson, R.C. Pacific Northwest Lab., Richland, WA (USA). Jan 1989. 327p. Sponsored by DOE Energy Research. DOE Contract AC06-76RL01830. Order Number DE89014202/JAW. Available from NTIS, PC A15/MF A01 - OSTI; GPO Dep.

Nearly 40 years ago, the US Atomic Energy Commission made a far- reaching commitment to the support of life-span radiation-effects studies in a relatively long-lived animal, the beagle dog. Something in the range of 200 million dollars has already been spent on a group of closely related experiments, many of which are only now coming to fruition. Responsible fiscal management of these studies, directed toward securing an optimum return from past investments, and toward creative planning of future directions, requires a comprehensive view of this total effort. This report is designed to provide that comprehensive view. This is primarily intended as a research management document. Evaluation and interpretation are tasks for those directly involved in conducting these experiments. The limited objective of the present document is to describe what has been done, to give some of the background for why it was done, to describe results already realized and applications that have been made of these results – all in a manner designed to display the total effort rather than piecemeal details. While proposing no specific answers to the questions "Where do we go from here?"it is hoped that the document will provide a basis for approaching that question in an informed manner. The maintenance of a continuity of scientific understanding and direction in these experiments, which often continue beyond the initiating investigators' working life, is no small part of the problem involved in conducting these experiments.

37384 (SAAS–368) **Radiation exposure to skin following radioactive contamination.** Baumann, H.; Beyermann, M.; Kraus, W. Staatliches Amt fuer Atomsicherheit und Strahlenschutz, Berlin (German Democratic Republic). 1989. 28p. (In German). Order Number DE89616656/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In the case of skin contamination intensive decontamination measures should not be carried out until the potential radiation exposure to the basal cell layer of the epidermis was assessed. Dose equivalent rates from alpha-, beta- or photon-emitting contaminants were calculated with reference to the surface activity for different skin regions as a function of radiation energy on the condition that the skin was healthy and uninjured and the penetration of contaminants through the epidermis negligible. The results have been presented in the form of figures and tables. In the assessment of potential skin doses, both radioactive decay and practical experience as to the decrease in the level of surface contamination by natural desquamation of the stratum corneum were taken into account. 9 figs., 5 tabs., 46 refs.

37385 **Priorities for the next decade of research in radiation ecology.** Hoffman, F.O. Jr. (Oak Ridge National Lab., Oak Ridge, TN (US)); McCormick, J.F. *Bulletin of the Ecological Society of America (USA),* 68(3): 324-325 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

Radiation ecology is the study of the fate and effects of ionizing radiations in the environment. The 1986 Chernobyl accident provides unprecedented opportunities to test models of the transport of a great variety of radionuclides in a variety of ecosystems under a variety of conditions throughout the world. International collaboration provides exciting opportunities to explore the fate of radionuclides on a global scale. Our understanding of ecological effects of ionizing radiations is based almost entirely upon results of point source gamma studies such as those described in this symposium. While results of these studies are incomplete and insufficient, even less is

known of ecological effects resulting from high levels of radioactive fallout. High priority should be given to completing long term studies of previously irradiated ecosystems and to initiating studies of the ecological effects of radioactive fallout. The most challenging task is to improve and couple our knowledge of radionuclide transport, radiation dosimetry and ecological effects so that, for a given level of radioactivity released into specific ecosystems, we can predict immediate and long term consequences.

37386 (CONF-8704370–, pp. 245-254) **Effects of DNA damage on transcription and transposition of Ty retrotransposons of yeast.** McEntee, K. (Univ. of California, Los Angeles (USA)); Bradshaw, V.A. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Treatment of Saccharomyces cerevisiae with the mutagen/carcinogen 4-nitro-quinoline-1-oxide (NQO) results in increased levels of transcripts homologous to a set of DNA damage responsive (Ddr) genes. The structural characterization of one such Ddr sequence (Ddr78A) demonstrates that it is related to the retrotransposon Ty. After NQO exposure for 4-6 hours, transcripts homologous to Ddr78A, as well as to a Ty1 probe, accumulate in cells. The authors have asked whether the increased transcript levels of these transposable elements is accompanied by increased transposition. They have isolated a series of mutants that constitutively express normally glucose-repressible alcohol dehydrogenase activities, ADH2 or ADH4. Previous studies have demonstrated that most of the spontaneous constitutive mutations in these genes are due to Ty transposition. By Southern hybridization analysis of the ADH2 and ADH4 regions from more than 100 NQO-induced mutations, they present evidence that DNA damage stimulates Ty transposition to these loci by 2-13-fold.

37387 (CONF-8704370–, pp. 255-264) **Inducible cellular responses to DNA damage.** Lambert, M.E.; Garrels, J.I. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Despite considerable efforts over the years to study specific cellular responses to DNA damage in mammalian cells, including increased expression of endogenous retroviruses, induction of DNA repair, growth arrest, and cell killing and mutagenesis, there are little systematic data on the overall patterns of change in cellular gene expression induced after exposure to DNA-damaging agents. In addition, very little is known about the functional significance of induced changes in gene expression or of the regulation of these inducible phenomena. To identify specific protein markers for inducible responses to DNA damage in mammalian cells, the authors have, therefore, utilized the QUEST system of high-resolution two-dimensional protein gel electrophoresis (HR2D) and quantitative analysis to study patterns of change in cellular protein synthesis induced in both rat and human cells in response to several classes of DNA damage. Their findings indicate that several proteins of known cellular function are rapidly induced during the acute phase of cellular response to DNA damage, including proliferating cell nuclear antigen (PCNA) or cyclin and human major histocompatibility class I (MHC-I) proteins.

37388 (CONF-8704370–, pp. 265-274) **Induction of VL30 element expression as a response to anoxic stress.** Anderson, G.R. (Roswell Park Memorial Institute, Buffalo, NY (USA)); Stoler, D.L.; Scott, J.P.; Farkas, B.K. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

VL30 elements have structural properties of transposons and, when pseudotyped by retroviruses, have been shown to be transposable. These elements are particularly interesting in that they represent one of two sets of rat cellular sequences transduced into the genomes of the Kirsten and Harvey murine sarcoma viruses. Anoxic stress induces normal rat fibroblasts to transcribe exceptionally high levels of functional mRNA, corresponding to the VL30 sequences. This stress is relatively mild, with no reduction in cell viability associated with the induction response. One anoxic stress response protein, of 34 kD and with lactate dehydrogenase (LDH) activity, appears likely to be encoded by VL30 sequences. Induction of VL30 RNA is not seen with a variety of other respiratory poisons, with the exception of a low level response to cyanide. The induction by cyanide, however, appears different, being part of a general response to highly toxic conditions. The induction of VL30 seen with cyanide is substantially less than with anoxia and, unlike anoxia, also results in production of endogenous type C leukemia virus.

37389 (CONF-8704370–, pp. 289-298) **Possible role of retrotransposons in carcinogenesis.** Weinstein, I.B. (Columbia Univ. Comprehensive Cancer Center and Institute of Cancer Research, New York, NY (USA)); Hsiao, W.L.; Hsieh, L.; Dragani, T.A.; Peraino, C.; Begemann, M. Cold Spring Harbor Lab. of Quantitative Biology, ME (USA). 1988. DOE Contract W-31-109-ENG-38. From Eukaryotic transposable elements as mutagenic agents; Cold Springs Harbor, NY, USA; 21 Apr 1987. In *Eukaryotic transposable elements as mutagenic agents.* Order Number DE89008620/JAW. Available from Cold Spring Harbor Laboratory, Box 100, Cold Spring Harbor, NY 11724.

Carcinogenesis involves complex changes in gene expression and the structure of cellular DNA. The DNA of mammalian cells, including humans, contains thousands of copies of endogenous retrovirus-like elements whose structures closely resemble transposable elements found in lower organisms. Because these elements might play a role in multistage carcinogenesis, the authors have carried out detailed studies on their expression during the course of development of carcinogen-induced and spontaneously arising rodent tumors. These studies indicate that carcinogen-induced liver tumor formation in both mice and rats is associated with a striking increase in the expression of endogenous retrovirus-like elements in carcinogen-induced liver tumors. In related studies they found that agents that induce liver cell proliferation cause the transient expression of these sequences. Studies employing cycloheximide and transient expression assays suggest that trans-acting repressor and activator proteins normally regulate the transcription of these sequences. Further studies of this phenomenon may lead to insights into the more widespread aberrations in gene expression often seen in tumors. Studies are also in progress to determine whether the expression of retrovirus-like sequences in tumors also leads, via reverse transcription, to gene transposition and insertion mutations and thus contributes to the process of tumor progression.

37390 (EC–1988, pp. 101-111) **Evaluation of the impact of acid deposition on Eastern Canada's sport fishery.** Simmons, M. (TYDAC Technologies, Inc., Ottawa, ON, Canada); Sayer, R. Environment Canada, Ottawa, ON (Canada). 1988. (CONF-8611291–: Perspectives on land modelling, Toronto, Canada, 17-20 Nov 1986;MICROLOG–88-06350). In *Perspectives on land modelling. Workshop proceedings.* Available from Environment Canada, Library Services, Terrasses de la Chaudiere, 10 Wellington St., Ottawa, ON, Canada K1A 0H3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

Under the Long Range Transportation of Atmospheric Pollutants (LRTAP) program, the Department of Fisheries and Oceans required an estimate of the economic impact of acid deposition on eastern Canada's sport fish industry. The project required a biophysical model to predict the impact of alternative deposition scenarios on

sport fish catch rates. This paper deals with the biophysical model through the biophysical concepts employed, the modelling approach used, and the use of a microcomputer based geographic information system (SPANS) to run the model and display the results. The biophysical model identifies the per cent change in fish availability to anglers under various deposition scenarios, for input to an economic model. The following deposition scenarios were evaluated: 1980 deposition reduced by 25%, and 1980 deposition reduced by 50%. The results, presented in map form, indicate increases in catch of greater than 6% for large tracts of northwestern Ontario and along the north shore of the St. Lawrence. 6 refs., 8 figs.

37391 (OMNR/FB–87-10) **Observations of lake trout (Salvelinus namaycush) spawning behaviour in low pH lakes near Sudbury, Ontario.** Lumatainen, V.A.; Snucins, E.J.; Gunn, J.M. Ontario Ministry of Natural Resources, Toronto, ON (Canada). Fisheries Branch. 1987. 75p. (MICROLOG–88-06153). Available from Ontario Ministry of Natural Resources, Public Information Centre, 99 Wellesley St., West, Toronto, ON, Canada M7A 1W3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

The spawning behaviour of lake trout (Salvelinus namaycush) was assessed in 5 low pH (pH 5.1 -5.7) lakes in the Sudbury area and in one circumneutral reference lake. The lake trout in the low pH lakes exhibited recruitment failure with no evidence of successful reproduction for, in some cases, a decade or more. The numbers of native lake trout in the low pH lakes were estimated to be in the range from 2 to 22. The remnant adult populations continued to spawn and produce viable gametes. Selected spawning sites were shallow (6 cm-3 m depth) and usually near shore, making them vulnerable to acidic run-off. Some sites were located well offshore with little potential of expsure to run-off water. Extensive use was made of ultrasonic transmitter tags to locate spawning sites and to provide information about the movements of adults during the spawning period. Additional findings included: egg predation by juvenile hatchery-stocked lake trout; unusual inverted swimming displays by spawning adults; and spawning of mature hatchery-stocked lake trout with native adults. 22 refs., 21 figs., 25 tabs.

37392 (OMNR/FB–87-11) **Preliminary assessment of the current impact and potential risk of acidic deposition on walleye populations in Ontario.** Wales, D.L.; Liimatainen, V.A. Ontario Ministry of Natural Resources, Toronto, ON (Canada). Fisheries Branch. 1987. 55p. (MICROLOG–88-06239). Available from Ontario. Ministry of Natural Resources. Fisheries Branch, Whitney Block, Room 2347, 99 Wellesley St. W., Toronto, ON, Canada M7A 1W3; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

Netting survey and field bioassay data were used to determine a pH threshold for survival of walleye. Established pH thresholds were then used to assess the current impact and potential risk of acidic deposition on walleye populations in Ontario. Extinction of walleye appeared to occur in lakes with pH < 5.5. Some losses may also have occurred in lakes with pH 5.5-6.0. An estimated 0.3% (number of lakes (N)=12) of the Ontario walleye lakes currently have pH < 5.5 and have likely lost walleye populations. A further 1.5% (N=60) of the lakes have pH 5.5-6.0 and may show signs of acidification stress. An estimated 2.0% (N=79) of the province's walleye lakes have very low alkalinities (0.0-2.0 mg/l) and are classified as extremely sensitive to continued high deposition of acidic precipitation. 19 refs., 4 figs., 7 tabs.

37393 (PB–89-861058/XAB) **Toxicology of ozone. January 1970-March 1988 (Citations from the NTIS data base). Report for January 1970-March 1988.** National Technical Information Service, Springfield, VA (USA). May 1989. 197p. Available from NTISPC N01/MF N01.

See also PB–89-861066.

This bibliography contains citations concerning laboratory and field investigations of the toxic effects of ozone. Topics include effects on forests, agricultural crops, humans, and laboratory animals. Synergism with other atmospheric pollutants such as oxides of sulfur and nitrogen is discussed. Occupational exposure, dosage, and effects on pulmonary and respiratory systems in humans and animals are also presented. (This updated bibliography contains 374 citations, none of which are new entries to the previous edition.)

37394 (PB–89-861066/XAB) **Toxicology of ozone. April 1988-April 1989 (Citations from the NTIS data base). Report for April 1988-April 1989.** National Technical Information Service, Springfield, VA (USA). May 1989. 38p. Available from NTISPC N01/MF N01.

Supersedes PB–88-860275. See also PB–89-861058.

This bibliography contains citations concerning laboratory and field investigations of the toxic effects of ozone. Topics include effects on forests, agricultural crops, humans, and laboratory animals. Synergism with other atmospheric pollutants such as oxides of sulfur and nitrogen is discussed. Occupational exposure, dosage, and effects on pulmonary and respiratory systems in humans and animals are also presented. (This updated bibliography contains 51 citations, all of which are new entries to the previous edition.)

37395 (SCC–8804) **Airborne contaminants and aquatic systems. An assessment of research needs.** Stokes, P. Science Council of Canada, Ottawa, ON (Canada). Committee on Industrial Policies. 1988. 52p. (MICROLOG–89-00940). Available from Science Council of Canada, 100 Metcalfe St., Ottawa, ON, Canada K1P 5M1; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

Research needs related to deposition of airborne acidic and other chemical pollutants into aquatic ecosystems in Canada are reviewed. Research into acidic deposition in the USA and Canada is summarized, and new approaches are suggested. Mitigation of surface water acidification by means of liming is discussed. An outline is then presented of various interviews conducted with university and government researchers, regarding the roles of governments and universities in water-related research and monitoring, the organization of research, priorities for water-related research, the value of the watershed as a management unit, and budgeting for research and rehabilitation. 48 refs., 4 figs., 1 tab.

37396 **Effects of air pollutants on the composition of stable carbon isotopes $\delta^{13}C$, of leaves and wood, and on leaf injury.** Martin, B. (Native Plants, Inc., Salt Lake City, UT (USA)); Bytnerowicz, A.; Thorstenson, Y.R. *Fishery Bulletin (USA)*, 88(1): 218-223 (Sep 1988).

Air pollutants are known to cause visible leaf injury as well as impairment of photosynthetic CO_2 fixation. Here we evaluate whether the effects on photosynthesis are large enough to cause changes in the relative composition of stable carbon isotopes, $\delta^{13}C$, of plant tissue samples, and, if so, how the changes relate to visual leaf injury. For that purpose, several woody and herbaceous plant species were exposed to $SO_2 + O_3$ and $SO_2 + O_3 + NO_2$ for one month. At the end of the fumigations, the plants were evaluated for visual leaf lesions, and $\delta^{13}C$ of leaf tissue was determined. Woody plants generally showed less visual leaf injury and smaller effects on $\delta^{13}C$ of pollutant exposure than did herbaceous plants. If $\delta^{13}C$ was affected by pollutants, it became, with few exceptions, less negative. The data from the fumigation experiments were consistent with $\delta^{13}C$ analyses of whole wood of annual growth rings from two conifer tree species, Pseudotsuga menziesii and Pinus strobus. These trees had been exposed until 1977 to exhaust gases from a gas plant at Lacq, France. Wood of both conifer species formed in the polluted air of 1972 to 1976 had less negative $\delta^{13}C$ values than had wood formed in the much cleaner air in 1982 to 1986. No similar, time-dependent differences in $\delta^{13}C$ of wood were observed in trees which had been continuously growing in clean air. Our $\delta^{13}C$ data from both relatively short-term artificial exposures and long-term natural exposure are consistent with greater stomatal limitation of photosynthesis in polluted air than in clean air.

37397 **Physiological aspects of deposition of trace gases to leaves.** Taylor, G.E. Jr. (Environmental Sciences Div., Oak Ridge National Lab., Oak Ridge, TN (US)); Hanson, P.J. *Bulletin of the Ecological Society of America (USA)*, 68(3): 427 (Jul 1987). (CONF-870835–: 72. annual meeting of the Ecological Society of America, Columbus, OH, USA, 9-14 Aug 1987).

The exchange of trace gases between the atmosphere and leaf surfaces in a central issue in research addressing the physiological and ecological consequences of air pollution stress. Experimental approaches to characterizing deposition include gas exchange measurements in chambers, isotope labeling, chemical analysis of plant tissues and leachates, process-level modeling, and micrometeorology. The most common technique utilizes the mass balance

approach in chambers operating at the individual-leaf, whole-plant, or canopy level. With attention to experimental design, research can address foliar sites of deposition (leaf surface vs leaf interior) and the role of cuticular, stomatal, and residual resistances. An understanding of deposition is essential for characterizing (1) mechanisms of injury , (2) physiological bases of genetic variation in plant response, (3) biologically effective features of air chemistry, and (4) significance of dry deposition in the biogeochemistry of terrestrial landscapes.

5604 Other Environmental Pollutant Effects

37398 (AD-A–204724/9/XAB) **Eligibility of noise-abatement proposals for grants-in-aid under the airport improvement program.** Ohnstad, E. Federal Aviation Administration, Washington, DC (USA). Office of Airport Planning and Programming. Jan 1989. 26p. (DOT/FAA/PP–89-2). Available from NTIS, PC A03/MF A01.

This report summarizes the provisions of existing Federal laws, regulations, administrative policies, and grant-program procedures that relate to funding of noise-abatement projects. The report also presents historical data on Federally assisted noise compatibility projects and funding levels in fiscal years 1982 - 1987. A literature search was conducted and parties involved with airport-noise compatibility planning and project implementation were consulted to identify proposals currently not eligible for grant assistance and the reasons for their ineligibility. The report concludes with recommendations to make eligibility criteria more flexible and to provide clearer guidance to parties involved with noise compatibility project formulation, evaluation and implementation.

37399 (AD-A–205280/1/XAB) **Examination of noise-management approaches in the United States. Final report.** Berrens, R.P.; DeWitt, J.S.; Baumann, D.D.; Nelson, M.E. Planning and Management Consultants Ltd., Carbondale, IL (USA). Dec 1988. 213p. Available from NTIS, PC A10/MF A01.

This report is intended to serve as a reference document on noise-management approaches used in the United States. Emphasis has been placed on identifying and evaluating the full range of techniques and measures available when selecting a noise-management strategy. Broadening the range of choice is a first step in moving toward the resolution and prevention of noise/land-use conflicts. Awareness of the available options is of critical importance when individual actors in an issue have limited unilateral power to achieve objectives. The first three chapters of the report provide the reader with background material designed to aid in the understanding of noise-management issues. A brief description of the noise problem in the U.S. is given, followed by a discussion on conceptual approaches to noise/land-use issues. Some basic concepts of sound and the measurement and assessment of noise are reviewed. In addition, the management application of noise descriptors, relating human responses to noise-exposure levels, is examined. In Chapter III, a change is made from describing the noise environment, to describe the legal framework of statutory and case law that shapes management policy. Chapters 4 through 6 are devoted to identifying and evaluating management approaches.

37400 (PB–89-860670/XAB) **Laser materials: radiation damage. January 1970-April 1989 (Citations from the NTIS data base). Report for January 1970-April 1989.** National Technical Information Service, Springfield, VA (USA). May 1989. 165p. Available from NTISPC N01/MF N01.

Supersedes PB–88-862909.

This bibliography contains citations concerning laser-beam damage to laser materials, including optical glass, mirrors, optical coatings, dielectrics, semiconductors, and alkali metal halides. The damage mechanisms are explored for various types of laser materials. Comparisons are made between variations in fabrication and preparation of the materials and the resulting degradation or damage to the materials. (This updated bibliography contains 323 citations, 10 of which are new entries to the previous edition.)

37401 (CONF-8906144–1) **Insurance and bonding.** Katzman, M.T. Oak Ridge National Lab., TN (USA). 1989. 39p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From Conference on free and responsible individual vs. prior restraint; Bozeman, Montana, USA; 8-11 Jun 1989. Order Number DE89013709/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Societal risk management in industrial democracies relies upon mechanisms of prior restraint rather than on responsibility for the consequence of accidents. The evolution of risk management from one based upon private, voluntary standard of risk management from one based upon private, voluntary standard setting to one based upon restraint is reviewed. While insurance and bonding historically have played a major role in private management of catastrophic risks, their role has been underutilized in the current, restraint-based mode. The conditions under the insurance and bonding that can serve as a tool for risk regulation are illustrated in the arena of toxic pollution risks. 45 refs., 1 fig.

37402 (SAND–89-0889) **Guidelines for preparing a contractor safety plan.** Lucy, W. Sandia National Labs., Albuquerque, NM (USA). Jul 1989. 13p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE89014613/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This report contains guidelines for SNLA contractors who must prepare contractor safety plans in compliance with Sandia's requirements.

Work presented at the 5o. Congreso Internacional sobre Geologia Aplicada a la Ingenieria, Buenos Aires (Argentina), 20-25 octubre 1986.

Geological investigations were performed at Sierra del Medio (Chubut Province), a mountainous massif of about 25 km by 8 km of migmatic origin, which emerges from a depressed tectonic trench or graben called Pampa de Gastre. The most ancient rocks belong to biotitic and anphibolic schist that passed almost entirely to tonalitoid migmatites with a second process producing granitic rocks. Boreholes were drilled on the basis of conclusions from Landsat satellites imagery and aerial photographic sets, folowed by field work on geological, petrographic, geophysical and hydrogeological features at surface, structural interpretation supported by geostatistical computations. Two sets of boreholes were drilled to investigate subsurface rock behaviour al 300 m depth and 800 m depth respectively, beginning at peripheral places and ending at the central part or selected site. Basic purposes of boreholes were to define structural and petrographic features of the rock massif by a good comprehension of master joints and faulting distribution with its belts of alteration mylonitization or brecciation, mechanical properties of samples, chemical composition and varitions, petrographic facies and mineralogy. Boreholes provided data to investigate joints, faults and dikes as general discontinuities for hydraulic research like permeability or effective hydraulic conductivity, and their geostatistical modelling. Boreholes are also being prepared for geophysical logging from which logthermal ones have already been completed.

37404 (DOE/ER/13796–3) **Comparison of spectral data gathered from a laboratory spectrometer and TM images with and without shadow correction.** Thiessen, R.L.; Eliason, J.R. Washington State Univ., Pullman, WA (USA). Dept. of Geology. 1989. 5p.

Sponsored by DOE Energy Research. DOE Contract FG06-87ER13796. (CONF-890768–1: International geoscience and remote sensing symposium, Vancouver, Canada, 10-14 Jul 1989). Order Number DE89010877/JAW. Available from NTIS, PC A02/MF A01 - OSTI.

Spectral reflectance data from field samples were determined with a laboratory spectrometer (Beckman DK-2A). The spectral curves obtained with the spectrometer were correlated with the histograms determined from the images. The tightly defined histograms from the shadow corrected TM provided the best correlation with the rock data. Several units, including the Rainier Mesa Member of the Timber Mountain Tuff, showed multiple spectral patterns on both images and rock spectra. This difference was evaluated versus geochemistry, hematitic alteration, devitrification, pumice content, and degree of welding. 11 refs., 3 figs., 3 tabs.

37405 (IAEA-R–4531-F) **$^{230}Th/^{234}U$ dating of the quaternary spring travertines in the Arava Rift Valley of Israel and paleoclimatic implications. Final report for the period 15 December 1986 - 15 December 1987.** Kronfeld, J. Tel Aviv Univ. (Israel); International Atomic Energy Agency, Vienna (Austria). Jul 1988. 51p. Order Number DE89617881/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

Springs and lake deposits (travertines) sampled along the western margins of the Arava segment of the Dead Sea Rift Valley, Israel, were studied as a potential source of palaeoclimatic information. The $^{230}Th/^{234}U$ disequilibrium method was used to determine the age of the investigated deposits. The radiometric dating was supplemented by detailed petrographic and chemical analyses of the collected samples. Detailed petrographic observations of the analysed travertine samples suggest their deposition under moderately-arid conditions, alternating with arid to extremely arid periods. This evidence is consistent with the preliminary conclusions drawn from palynological studies in the area. Dating by the $^{230}Th/^{234}U$ disequilibrium method indicates that most travertine ages correspond to oceanic ^{18}O stages 5 and 7. The good correspondence between apparent ages as deduced from the position of the travertines in vertical and lateral successions and the radiometric ages, lends credibility to the radiometric ages. The clustering of ages during the warm ^{18}O stages bears similarity to the temporal distribution of middle to late Pleistocene sapropelic horizons in the Eastern Mediterranean Basin which further leads to suspicion that during insolation maxima monsoonal cells originating in the Indian Ocean have shifted northwards reaching the latitude of the Arava and Negev Highlands. Refs and figs.

37406 (ORNL/FTR–2945) **Thirteenth radioactive conference, radiocarbon measurements and applications, Dubrovnik, Yugoslavia, June 20–25, 1988: Foreign trip report.** Peng, T.H. Oak Ridge National Lab., TN (USA). 8 Jul 1988. 13p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014058/JAW. Available from NTIS, PC A03/MF A01 - OSTI.

The International Radiocarbon Conference is held once every three years. The purpose of the meeting is to offer an opportunity for an international community of scientists to present and discuss results of their research on improving techniques for radiocarbon measurement and their application in various aspects of natural systems, including the ocean-atmosphere carbon cycle. Four major sessions were held for the presentation of scientific results, another session dealt with radiocarbon data bases, and the final session was devoted to workshops for radiocarbon measurement and international comparison. A total of 152 papers were presented, which included both oral and poster presentations. Participants came from over 30 countries, with a total number of about 200. The paper presented by the traveler, entitled "Changes in Ocean Ventilation Rates Over the Last 7000 Years Based on ^{14}C Variations in the Atmosphere and Oceans," was included in the oceanography portion of the Carbon Cycle in the Environment session. Radiocarbon is the most powerful and useful tracer for studying the carbon cycle in the atmosphere-biosphere-ocean system. The measuring technique has mostly shifted from a conventional β-counting approach that uses gas or liquid scintillation counters to an atom counting approach that uses the accelerator mass spectrometer.

37407 (USGS-BULL–1831) **Index of granitic rock masses in the state of Nevada: A compilation of data on 205 areas of exposed granitic rock masses in Nevada.** Geological Survey, Denver, CO (USA). 1988. 81p. Sponsored by DOE Nuclear Energy. DOE Contract AI08-78ET44802. Order Number DE89014818/JAW. Available from NTIS, PC A06/MF A01; OSTI - USGS, Federal Center, Box 25425, Denver, CO 80225; GPO Dep.

The compilation of 205 areas of exposed granitic rock in Nevada was undertaken for the US Department of Energy. The purpose was to obtain data for evaluating granitic rock masses as potential underground nuclear waste repositories. Information, compiled by county for areas of granitic rock exposure, includes general location, coordinates, land classification, areal extent, accessibility, composition, age, rocks intruded, aeromagnetic expression, mining activity, and selected references. 49 refs., 18 figs., 3 tabs.

37408 (IC–88/424) **Seismic zoning in India.** Agrawal, R.C. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 23p. Order Number DE89619707/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

After a very brief presentation of the concept and procedures for dealing with earthquake data for seismic zoning studies, the seismic zoning studies in India are described in detail. 26 refs, 8 figs.

37409 (IC–89/18) **Paleomagnetic study of Shanwang formation, Shandong Province, China.** Liu Huangfeng; Shi Nin. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 12p. Order Number DE89619708/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The measured direction of the stable remanence of Shanwang Formation, Shandong Province, is D = 355.8 deg., I = 47.1 deg. According to the axial geocentre dipole model, the paleolatitude there during Miocene was 28.3 deg. N. The corrected value based on far-sided effect is 32.4 deg. N. The uncorrected and corrected pole positions were (81.0 deg. N, 323.1 deg. E) and (84.6 deg. N, 339.7 deg. E) separately. Comparing them with paleo-flora shows that the corrected value of paleolatitude is probably reasonable. (author). 14 refs, 3 figs, 1 tab.

37410 (LA-UR–89-1928) **Computer simulations of explosive volcanic eruptions.** Wohletz, K.H.; Valentine, G.A. Los Alamos National Lab., NM (USA). 1989. 40p. Sponsored by DOE/DP;DOE/ER. DOE Contract W-7405-ENG-36. (CONF-890702–3: 28. international geological congress, Washington, D.C., USA, 9-19 Jul 1989). Order Number DE89014024/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We have adapted computer codes that provide such solutions to study explosive volcanic phenomena. These fully nonlinear conservation equations are cast in two-dimensional cylindrical coordinates, which with closure equations comprise 16 equations with 16 unknown variables. Solutions for several hundred seconds of simulated eruption time require two to three hours of a Cray-1 computer time. Over 100 simulations have been run to simulate the physics of highly unsteady blasts, sustained and steady Plinian eruptions, fountaining, column eruptions, and multiphase flow of magma in lithospheric conduits. The unsteady-flow calculations show resemblance to shock-tube physics with propagation of shock waves into the atmosphere and rarefaction waves down the volcanic conduit. Steady-flow eruption simulations demonstrate the importance of supersonic flow and over pressure of erupted jets of tephra and gases in determining whether the jet will buoyantly rise or collapse back to the earth as a fountain. Flow conditions within conduits rising through the lithosphere determine eruptive conditions of overpressure, velocity, bulk density, and vent size. Such conditions within conduit systems are thought to be linked to low-frequency, sustained seismicity known as volcanic tremor. These calculations demonstrate the validity of some analytical eruption calculations under limited conditions. 31 refs., 10 figs., 1 tab.

37411 (NUREG/CR–5375) **Post-Pennsylvanian reactivation along the Washita Valley fault, southern Oklahoma.** VanArsdale, R.; Ward, C.; Cox, R. Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering; Arkansas Univ., Fayetteville, AR

(USA). Dept of Geology. Jun 1989. 53p. Sponsored by Nuclear Regulatory Commission. Available from NTIS, PC A04/MF A01 - GPO - OSTI.

Surface exposures of faults of the Washita Valley fault (WVF) system in Garvin, Murray, Carter, and Johnston counties of southern Oklahoma were studied to determine if there has been post-Pennsylvanian fault reactivation and to determine if there has been any Quaternary fault movement. This was undertaken through field mapping, by dating alluvium which overlies the faults, and by logging trenches excavated across the WVF. In northern Murray County and southern Garvin County (site A), the WVF displaces Late-Pennsylvanian Oscar Group showing post-Pennsylvanian movement; however, no faulting was observed in 2000 year old alluvium of Wildhorse Creek along strike of the WVF. Three sites (B, C, and D) are located within the Arbuckle Mountains. Faulting of Virgilian age Vanoss Conglomerate and Vanoss Shale reveal post-Virgilian (Late Pennsylvanian) activity along a subsidiary fault in northern Murray County (site B). A 12000 to 15000 year old terrace at this site is unfaulted. Absence of any fault related features in paleosols which overly the WVF along the Washita River (site C) show that the fault has not been active during the last 1570 $\pm$ 190 years in southern Murray County. Similarly, absence of any fault related features along Oil Creek (site D) indicates that the WVF has not been active during the last 1810 $\pm$ 80 years in northern Carter and Johnston Counties. Faults in the Antlers Sandstone in southern Johnston County (site E) reveal post-Lower Cretaceous reactivation of the WVF. 49 refs., 28 figs., 1 tab.

37412 (SAND–89-0155) **Science guide for the Long Valley Caldera deep hole.** Rundle, J.B.; Eichelberger, J.C. (eds.). Sandia National Labs., Albuquerque, NM (USA). May 1989. 88p. Sponsored by DOE Conservation & Renewable Energy. DOE Contract AC04-76DP00789. Order Number DE89013332/JAW. Available from NTIS, PC A05/MF A01 - OSTI; GPO Dep.

The Magma Energy Program of the US Department of Energy, Geothermal Technology Division, is planning to begin drilling a deep (6 km) exploration well in Long Valley Caldera, California, in September 1988. The location of the well is in the central part of the caldera, coincident with a large number of shallow (5-7 km) geophysical anomalies identified through many independent investigations. Results from the hole will permit the following: direct investigation of the geophysical anomalies interpreted to be magma; investigation of the patterns and conditions of deep fluid circulation and heat transport below the caldera floor; determination of the amount of collapse and subsequent resurgence of the central portion of Long Valley caldera; and determination of the intrusion history of the central plutonic complex beneath the caldera, and establishment of the relationship of intrusive to eruptive events. The hole will thus provide a stringent test of the hypothesis that magma is still present within the central plutonic complex. If the interpretation of geophysical anomalies is confirmed, the hole will provide the first observations of the environment near a large silicic magma chamber. 80 refs., 7 figs., 2 tabs.

37413 (SAND–89-1366C) **Research drilling in young silicic volcanoes.** Eichelberger, J.C. Sandia National Labs., Albuquerque, NM (USA). 1989. 37p. Sponsored by DOE Conservation & Renewable Energy. DOE Contract AC04-76DP00789. (CONF-890702–2: 28. international geological congress, Washington, DC, USA, 9-19 Jul 1989). Order Number DE89014187/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Magmatic activity, and particularly silicic magmatic activity, is the fundamental process by which continental crust forms and evolves. The transport of magma from deep crustal reservoirs to the surface is a neglected but important aspect of magmatic phenomena. It encompasses problems of eruptive behavior, hydrothermal circulation, and ore deposition, and must be understood in order to properly interpret deeper processes. Drilling provides a means for determining the relationship of shallow intrusive processes to eruption processes at young volcanoes where eruptions are best understood. Drilling also provides a means for directly observing the processes of heat and mass transfer by which recently emplaced intrusions approach equilibrium with their new environment. Drilling in the Inyo Chain, a 600-year-old chain of volcanic vents in California, has shown the close relationship of silicic eruption to shallow dike emplacement, the control of eruptive style by shallow porous-flow degassing, the origin of obsidian by welding, the development of igneous zonation by viscosity segregation, and the character and size of conduits in relation to well-understood magmatic and phreatic eruptions. 36 refs., 9 figs.

37414 (SKB-TR–88-25) **Postglacial faulting and paleoseismicity in the Landsjaerv area, northern Sweden.** Lagerbaeck, R. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Oct 1988. 44p. Order Number DE89783579/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Post-glacial fault scarps, up to about 20 m in height and forming a 50 km long fault set with a SSW-NNE orientation, occur in the Lansjaerv area in northern Sweden. By trenching across the fault scarps it has been possible to date fault movement relative to the Quaternary stratigraphy. It is concluded that the fault scarps generally developed as single event movements shortly after the deglaciation about 9000 years ago. At one location there are indications that minor fault movements may have occurred earlier during a previous glaciation but this is uncertain. The fault scarps are, at least partially, developed in strongly fractured and chemically weathered zones of presumed pre-Quaternary age. To judge from the appearance of the bedrock fault scarps, and the deformation of the Quaternary deposits, the faults are reverse and have dips between some 40-50^0 and the vertical. The faulting was co-seismic and earthquakes in the order of M 6.5-7.0, or higher, are inferred from fault dimensions and the distribution of seismically triggered landslides in a wider region. Distortions in different types of sediment, interpreted as caused by the influence of seismic shock, occur frequently in the area. Examples of these are briefly described.

37415 (AOSTRA–8808, pp. 14) **Modelling of fracture and deformation processes in oil sands.** Settari, A. (SIMTECH Consulting Services Ltd., Calgary, AB, Canada). Alberta Oil Sands Technology and Research Authority, Edmonton, AB (Canada). 1988. (CONF-880807–: 4. UNITAR/UNDP international conference on heavy crude and tar sands, Edmonton, Canada, 7-12 Aug 1988;CE–02589). In *UNITAR/UNDP, 4th international conference on heavy crude and tar sand, vol. 1.* Available from Alberta Oil Sands Technology and Research Authority, 500 Highfield Pl., 10010-106 St., Edmonton, AB, Canada T5J 3L8; $150.00 CAN.

Injection into unstimulated heavy oil reservoirs generally results in fracturing and disturbance of the soil matrix. Prediction of the fracture dimensions requires correct representation of a number of mechanisms. Parametric analysis shows that the process is dominated by fluid flow, which is, in turn, controlled by the non-linear mechanical behavior of the sands. Other phenomena that are necessary for realistic modelling are shear failure at the fracture face, turbulent flow in the fracture, tip resistance to fracture propagation, and back-stress. The new modelling system consists of a detailed model of coupled flow and soil mechanics and a model of fracture propagation. A method has been developed for translating the results of the detailed model for the calculation of the fluid leak-off from the fracture to the reservoir, into the simplified leak-off with effective parameters used in the fracturing model. The new modelling system based on these principles is very efficient, and compares favorably with the field data in terms of fracture dimensions and widths, and the extent of the failure zone. 33 refs., 10 figs., 1 tab.

37416 (NEI-DK–167) **Pressure-dependent melting curve of natural carnallite, $KMgCl_3.6H_2O$, in a closed system, where evaporation is prevented.** Fabricius, J.; Rose-Hansen, J. Danmarks Geologiske Undersoegelske, Copenhagen (Denmark); Copenhagen Univ. (Denmark). 1988. 8p. (CONF-8705377–: 9. symposium on fluid inclusions, Oporto, Portugal, 4-6 May 1987). Order Number DE89776127/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

EFP-84.

The evaporite mineral carnallite, $KMgCl_3x6H_2O$, melts incongruently at 167.5 deg. C under atmospheric pressure in a closed

space, where evaporation is prevented. The incongruent melting results in a melt consisting of $MgCl_2x6H_2Ox0.25$ KCl plus solid KCl. Fluid incongruent of the Na-K-Mg-Cl-H_2O system with daughter carnallite, trapped in quartz crystals from Danish Zechstein 2 salt, were studied by means of microthermometry. The liquid shrinkage vapour bubble disappears during heating at a lower temperature T_b deg. C than the melting/dissolving temperature T_m deg. C of the carnallite component. The pressure built-up in the inclusion at T_m is calculated from the equation $P = (T_m-T_b)dP/dT$ MPa, where dP/dT ranges from 1.04 MPa/deg. C to 1.08 MPa/deg. C, depending on the salinity and T_m, i.e., homogenization in fluid phase. The pressure dependent melting curve up to c. 150 MPa can be expressed by the formula T_m deg. C = 167.5 deg. C + (dT/dP)P deg. C, where dT/dP = 0.1 deg. C/MPa. Small cores, 10x2.5 cm, of the salt mentioned above, containing disseminated subhedral single crystals of carnallite, were subjects for autoclave studies. Thick sections (1 mm) of the autoclaved cores were examined under the microscope in order to observe the reaction of the grains of carnallite. The grains were compared with grains in thick sections from the same core before autoclavation. Melted grains are easily identified: release of a small amount of solution; polycrystalline appearance; release of high pressure gas, dissolved in the original grain of carnallite. As a rule, also the mineral bischoffite, $MgCl_2x6H_2O$, forms after melting of carnallite. The mean dT/dP value is calculated to 0.10 deg. C/MPa in the interval 0.08 - 0.12 deg. C/MPa, with the uncertainties +/- 2 deg. C and +/- 1 MPa. (author) 20 refs.

37421 (AD-A–205161/3/XAB) **Precise proper-motion measurement of solar granulation.** November, L.J.; Simon, G.W. Air Force Geophysics Lab., Hanscom AFB, MA (USA). 1 Oct 1988. 18p. (AFGL-TR–89-0046). Available from NTIS, PC A03/MF A01.

Pub. in the Astrophysical Jnl., Vol. 333, No. 1, Part 1, 427-442(1 Oct 1988).

A powerful cross-correlation technique is described for the precise measurement of the proper motion of tracers seen on successive images of a time series of solar granulation. The cross correlation is defined as a function of position in the image, within a spatially localized apodization window. The time average of the spatially localized cross correlation gives a measure of the displacement that is not biased by atmospheric seeing. The window size and the seeing define the effective resolution of the vector-displacement determination. We use this cross-correlation technique to analyze an 80 minute run of white-light observations made at the Sacramento Peak Vacuum Tower Telescope. Even though geometric distortion due to atmospheric seeing is instantaneously at least 10-20 times larger than the observed scale of the large-scale solar displacements, 100-1000 m/s , its net contribution to the 80 minute average of proper motions is RMS $<$ 20 m/s. The measured vector displacement clearly show solar mesogranulation and super-granulation flows having spatial scales from 10 min to 40 min. The measured amplitude of these flows is significantly larger than the RMS 100 m/s noise which we attribute principally to solar granulation evolution.

37422 (AD-A–205162/1/XAB) **Temporal variations of solar-spectral-line profiles induced by the 5-minute photospheric oscillation.** Gomez, M.T.; Marmolino, C.; Roberti, G.; Severino, G. Air Force Geophysics Lab., Hanscom AFB, MA (USA). 1987. 10p. (AFGL-TR–89-0050). Available from NTIS, PC A02/MF A01.

Pub. in Astronomy and Astrophysics, Vol. 188, 169-177(1987).

The variations induced by the 5-min photospheric oscillation are simulated on the line profiles. A phase lag of the order of 150° between temperature and velocity wave perturbations can explain the observed differences between the oscillations of the line flanks at residual intensity levels $I/I_c < 0.7$. Such a phase relation in the 5-min oscillation differs from that of the adiabatic case in which the temperature and pressure fluctuations are 90° out of phase with respect to the velocity. A simple model of radiative damping in the solar photosphere can produce the required phase lag between temperature and velocity. The granulation can affect differentially the oscillations of the line flanks. This effect, however, does not fit the observed behavior of the flank oscillations.

37423 (AD-A–205182/9/XAB) **Study of fine-scale solar dynamics. Final report, 6 September 1985-31 October 1988.** Acton, D.S.; Smithson, R.C.; Roehrig, J.R.; Sharbaugh, R.J. Lockheed Missiles and Space Co., Inc., Palo Alto, CA (USA). Research and Development Div. 23 Oct 1988. 21p. (LMSC/F–285448). Available from NTIS, PC A03/MF A01.

A description of the new Lockheed 57-actuator segmented active mirror is given. Observational results from four observing runs at Sac Peak with the active mirror are presented, along with a Fourier analysis of these results. The active mirror is shown to be capable of producing near-diffraction limited results in average seeing conditions.

37424 (AD-A–205232/2/XAB) **Study of weak solar magnetic fields. Final report, 1 December 1987-30 November 1988.** Zirin, H. California Inst. of Tech., Pasadena, CA (USA). 1989. 2p. Available from NTIS, PC A02/MF A01.

There have been two major gains in this period: completion and analysis of round-the-clock observations in cooperation with the Huairou Observatory in the People's Republic of China, which enabled the author to obtain the first long-term observations of weak solar magnetic fields, and the application of the magneto-optic filter to the measurement of magnetic fields. The observations in collaboration with China enabled observations for as long as seven days of solar magnetic regions, with only short interruptions when the sun could not be seen from the U.S. and China. The stronger elements of the chromospheric network are rather long lived, lasting about 70 hours. In fact, it is possible that they last longer; because, although the shape changes; it is often possible to still identify a magnetic entity. The second important result was that one could find definite evidence of magnetic field cancellation occurring after solar flares.

The increased time coverage enabled checking the evolution of the magnetic fields during this period. The other development, the use of the magneto-optic filter, is full of promise for the future. This filter is made by using a glass tube filled with potassium which is placed in a strong magnetic field. It enables us to obtain a passband of about 30 milliAngstroms to be obtained at the potassium resonance line at 7699 Angstroms. This filter will take magnetograms of sensitivity higher than that obtained before; the only limitation is on the position of the passband which is fixed until an electromagnet is obtained to vary the magnetic field strength. The magneto-optic filter will enable measurements of solar magnetic fields to proceed much further.

37425 (BNL–42627) **Synchrotron x-ray fluorescence analyses of stratospheric cosmic dust: New results for chondritic and nickel-depleted particles.** Flynn, G.J.; Sutton, S.R. Brookhaven National Lab., Upton, NY (USA). Jun 1989. 19p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-8903111–4: Lunar planetary science conference, Houston, Texas, USA, 12-18 Mar 1989). Order Number DE89014032/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Trace element abundance determinations were performed using synchrotron x-ray fluorescence on nine particles collected from the stratosphere and classified as "cosmic". Improvements to the Synchrotron Light Source allowed the detection of all elements between Cr and Mo, with the exceptions of Co and As, in our largest particle. The minor and trace element abundance patterns of three Ni-depleted particles were remarkably similar to those of extraterrestrial igneous rocks. Fe/Ni and Fe/Mn ratios suggest that one of these may be of lunar origin. All nine particles exhibited an enrichment in Br, ranging form 1.3 to 38 times the CI concentration. Br concentrations were uncorrelated with particle size, as would be expected for a surface correlated component acquires from the stratosphere. 27 refs., 4 figs., 2 tabs.

37426 (CBPF-NF–060/88) **Black-hole decay and topological stability in quantum gravity.** Rodrigues, L.M.C.S.; Soares, I.D.; Zanelli, J. Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro, RJ (Brazil). 1988. 18p. Order Number DE89618785/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

In the context of Quantum Gravity, the evolution of Schwarzschild black-holes is studied. The superspace of the theory is restricted to a class of geometries that contains the Schwarzschild solution for different masses as well as other geometries with different topologies. It is shown that, black-holes are topologically stable under quantum fluctuations but unstable under quantum processes of emission and absorption of gravitons. It is found that, the probability of emission behaves as exp (- α (M_f - M_i)), where M_i and M_f are the masses associated to the initial and final states, respectively and α is a positive constant of the order of 1. As the black-hole looses mass it evolves towards a state corresponding to a black-hole of very small that cannot be distinguished from a pure graviton state.

37427 (ESA-SP–281, pp. 89-92) **Jovian equatorial H_2 emission from 1979-1987.** McGrath, M.A. (Johns Hopkins Univ., Baltimore, MD (US)); Moos, H.W.; Ballester, G.E.; Coplin, K.A. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

Ninety two IUE observations of the Jovian equatorial region taken by Johns Hopkins University observers between 2 Dec 1978 and 1 Feb 1988 were averaged together by date of observation, resulting in 22 averaged spectra which were fit with a model to determine the amount of H_2 Lyman band emission in the region 1552-1624A. The data suggest that the H_2 emission may vary with time. Especially suggestive is the marked downward trend of the emission between 1983 and 1987, during which time the strength of the emission in the 1552-1624A region decreased by about a factor of 10. Uncertainty in the existing data and a gap in the data in 1980 and 1981 preclude a positive identification of a correlation between the brightness of the H_2 emission and the major solar cycle.

37428 (ESA-SP–281, pp. 97-102) **Phenomenological analysis of Jovian north auroral H_2 Lyman band emissions.** Livengood, T.A. (Johns Hopkins Univ., Baltimore, MD (US). Dept. of Physics and Astronomy); Moos, H.W.; Ballester, G.E. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

Low-dispersion spectra taken with the IUE SWP from 1981-88 are examined for gross longitudinal features in Jovian north auroral emission activity and for evidence of long-term trends in auroral characteristics. Integrated photon flux in the H_2 Lyman-band region is extracted from each of the spectra, characterizing auroral emission strength at time of exposure. A plot of flux vs. Jovian central meridian longitude (System III) corroborates an enhanced emission region centered at about 180^0 reported by Skinner et al., (1984). Curves fit to fluxes grouped as "scans" (consecutive exposures made over a single Jovian rotation) vs. longitude characterize width, position and intensity of the enhanced region. Study includes examination of possible long-term variation in auroral peak intensity and width of the enhanced region vs. time, as well as possible correlation of the light curve integrated over longitude as a measure of total power emitted, vs. the longitudinal position of the intensity peak; more energetic aurorae appear to peak at values of central meridian longitude lower than the previously reported 180^0. An analysis is made of longitudinal dependence in the ratio of photon flux in the Lyman and Werner bands, an indicator of primary particle energy.

37429 (ESA-SP–281, pp. 115-117) **Spectral evolution of SN 1987A in the IUE long wavelength range.** Sanz Fernandez de Cordoba, L. (Instituto Nacional de Tecnica Aerospacial, Madrid (ES)); Cassatella, A.; Gilmozzi, R.; Wamsteker, W.; Kirshner, R.; Panagia, N.; Sonneborn, G. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

IUE low resolution spectra of SN 1987 A, in the long wavelength range, (1952 - 3348A), obtained in the period Feb 25, 1987 - Mar 17, 1988, have been analyzed to study its spectral evolution. We study the spectral variations by comparing spectra obtained at two consecutive observing dates.

37430 (ESA-SP–281, pp. 117-120) **IUE observations of oxygen-rich supernova remnants.** Raymond, J.C. (Harvard-Smithsonian Center for Astrophysics, Cambridge, MA (US)); Blair, W.P.; Danziger, J.; Matteucci, F. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

Oxygen-rich supernova remnants present an opportunity to observe material ejected in type II supernova explosions. IUE observations help to determine the composition of the ejecta (specially C and Si abundances) and to test models for the ionization and excitation of the ejecta. We present UV observations of two oxygen-rich supernova remnants (N132D in The Large Magellanic Cloud and 1E 0102-7219 in the Small Magellanic Cloud) and discuss the similarities and differences between them.

37431 (ESA-SP–281, pp. 127-132) **Far UV observations of black hole candidates: the case of LMC X-3.** Treves, A. (Milan Univ. (IT). Ist. di Fisica); Belloni, T.; Maraschi, L.; Bouchet, P.; Falomo, R.; Chiappetti, L.; Tanzi, E.G. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

In this paper we first review briefly the observations of the two sources which have a massive non collapsed component, namely Cyg X-1 and LMC X-1. Then we consider A0620-00 and LMC X-3, whose visible component is much less luminous. The discussion will be focussed in particular on the latter object, because of its non-transient nature, and the important role of UV observations in clarifying the nature of the accretion disk around the hole.

37432 (ESA-SP–281, pp. 133-136) **IUE spectrophotometry of the accretion disk of HZ Her/Her X-1.** Boyle, S.J. (University Coll., London (GB). Dept. of Physics and Astronomy); Howarth, I.D. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

We present IUE low resolution spectra of the accretion disc of the X-ray binary HZ Her/Her X-1. The UV flux contribution from the subgiant companion HZ Her was predicted, using a model constrained by fits to B-magnitude photometry, and subtracted from the observed IUE spectra to leave accretion disc spectra. We compare the observed disc UV fluxes with those predicted by a simple model of the disk emission based on X-ray reprocessing.

37433 (ESA-SP–281, pp. 137-140) **Simultaneous IUE, exosat, and optical observations of the unusual AM Her type variable H0538+608.** Shrader, C.R. (National Aeronautics and Space Administration, Greenbelt, MD (US). Goddard Space Flight Center); Remillard, R.; Silber, A.; McClintock, J.E.; Lamb, D.Q. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

We report on simultaneous observations of the AM Her type variable H0538+608 made with IUE, EXOSAT, and the 1.3 m McGraw-Hill Observatory telescope. Subsequent optical spectrophotometry at high and low resolution was also performed. The X-ray and optical data show clear evidence of a 3.30^{+}-0.03 hour period. Three SWP spectra were taken outside of eclipse and during overlapping phase intervals. The UV spectra contain strong emission lines characteristic of this class of objects and a flat continuum which appears to be deficient, given the brightness of source at optical and X-ray wavelengths. There is evidence for intensity variations in emission lines, particularly CIV. The X-ray light curves for H0538+608 reveal some interesting behavior which may be related to irregularities in its acretion flow.

37434 (ESA-SP–281, pp. 141-144) **0535+26/HDE 245770 - a typical Be/X-ray transient system: coordinated multiwavelength twelve years monitor.** Giovannelli, F. (Consiglio Nazionale delle Ricerche, Frascati (IT). Lab. di Astrofisica Spaziale); Burger, M.; Dessel, E.L. van; Bartolini, C.; Guarnieri, A.; Piccioni, A.; Kurt, V.G.; Sheffer, E.K. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

In this paper we emphasize the study of the physics and dynamics of the mass transfer at periastron and subsequent X-ray flaring, which is a typical problem of the X-ray/Be binary system class.

37435 (ESA-SP–281, pp. 145-148) **IUE and optical observations of X-ray sources in the LMC.** Bianchi, L. (Osservatorio Astronomico, Turin (IT)); Pakull, M. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

The optical counterparts of LMC X-6 (star Wo564) and of LHG-8 (HV5542) were observed with IUE and with several optical instruments at ESO. We present here the analysis of the UV spectral features and continuum flux, from which the values of the effective temperature and bolometric luminosity of the stars are derived. We also analyze a number of UV and optical observations of the source LHG-83, obtained over the past three years.

37436 (ESA-SP–281, pp. 155-158) **1981 outburst of the old nova GK persei.** Panek, R.J. (Wellesley Coll., MA (US)); Raymond, J.C.; Hartmann, L.W.; Swank, J.H.; Wu, C.C.; Holm, A.V. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

GK Per was observed in 1981 with the IUE, during its rise, maximum, and subsequent return to minimum. In outburst, GK Per is luminous but much redder than dwarf novae or standard model accretion disks. The observed spectrum can be explained qualitatively with the Ghosh and Lamb model for the interaction of an accretion disk with the magnetic field of the accreting white dwarf. N V and He II are enhanced relative to other emission lines during outburst. This can be understood with photoionization by very soft X-rays having a luminosity comparable to that of the hard X-rays.

37437 (ESA-SP–281, pp. 163-166) **Observations and simulations of Nova Vul 1984 2: a Nova with ejecta rich in oxygen, neon, and magnesium.** Starrfield, S. (Arizona State Univ., Tempe (US). Dept. of Physics); Los Alamos National Lab., NM; Sonneborn, G.; Stryker, L.L.; Sparks, W.M.; Ferland, G.; Wagner, R.M.; Gallagher, J.S.; Wade, R.; Williams, R.E. European Space Agency, 75 - Paris (France). Jun 1988. (CONF-8804199–: Celebratory symposium on a decade of UV astronomy with the IUE satellite, Greenbelt, Maryland, USA, 12 Apr 1988). In *Decade of UV astronomy with the IUE satellite. Volume 1 Proceedings of a celebratory symposium.* Order Number DE89012116/JAW. Available from NTIS (US Sales Only), PC A19/MF A01.

Nova Vul 1984 has been observed with the IUE Satellite from December 1984 through November 1987 and we expect to be able to observe it with the IUE Satellite for at least another two years. These spectra are characterized by strong lines from Mg, Ne, C, Si, O, N, and other elements. Data obtained in the ultraviolet, infrared, and optical show that this nova is ejecting material rich in oxygen, neon, and magnesium.

37438 (FNAL/C–89/112-A) **The cosmological constant problem.** Dolgov, A.D. Fermi National Accelerator Lab., Batavia, IL (USA). May 1989. 14p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-8903132–2: 24. Rencontres de Moriond: electroweak interactions and unified theories, Les Arcs, France, 5-12 Mar 1989). Order Number DE89013150/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A review of the cosmological term problem is presented. Baby universe model and the compensating field model are discussed. The importance of more accurate data on the Hubble constant and the Universe age is stressed. 18 refs.

37439 (LAL–88-41) **Introduction to gravity and cosmology.** Jauneau, L. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Sep 1988. 91p. (CONF-8809359–: International school of elementary particle physics, Duilovo-Split, Yugoslavia, 18 Sep - 2 oct 1988). Order Number DE89781520/JAW. Available from NTIS (US Sales Only), PC A05/MF A01.

Relativity principles, equivalence principles, and the general covariance principle are introduced. Curved space analysis via tensor calculus and absolute differential calculus is outlined. Einstein's equations are presented. The Schwarzschild solution; tests of general relativity; and black holes are discussed. Application of general relativity to cosmology is considered. The Standard Model of cosmology and its extensions are reviewed.

37440 (LBL–26210) **Cosmic relics from the big bang.** Hall, L.J. Lawrence Berkeley Lab., CA (USA). Dec 1988. 19p. Sponsored

by DOE Energy Research. DOE Contract AC03-76SF00098. (UCB-PTH-88/26;CONF-880747-7: 16. annual SLAC summer institute on particles physics, Stanford, CA, USA, 18-29 Jul 1988). Order Number DE89013268/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A brief introduction to the big bang picture of the early universe is given. Dark matter is discussed; particularly its implications for elementary particle physics. A classification scheme for dark matter relics is given. 21 refs., 11 figs., 1 tab.

37441 (LBL–27233) **Spectral measurements of the cosmic microwave background.** Kogut, A.J. Lawrence Berkeley Lab., CA (USA). Apr 1989. 195p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. AST-84O6187;DPP-8716548. Order Number DE89014895/JAW. Available from NTIS, PC A09/MF A01 - OSTI; GPO Dep.

Three experiments have measured the intensity of the Cosmic Microwave Background (CMB) at wavelengths 4.0, 3.0, and 0.21 cm. The measurement at 4.0 cm used a direct-gain total-power radiometer to measure the difference in power between the zenith sky and a large cryogenic reference target. Foreground signals are measured with the same instrument and subtracted from the zenith signal, leaving the CMB as the residual. The reference target consists of a large open-mouth cryostat with a microwave absorber submerged in liquid helium; thin windows block the radiative heat load and prevent condensation atmospheric gases within the cryostat. The thermodynamic temperature of the CMB at 4.0 cm is 2.59 $\pm$ 0.07 K. The measurement at 3.0 cm used a superheterodyne Dicke-switched radiometer with a similar reference target to measure the zenith sky temperature. A rotating mirror allowed one of the antenna beams to be redirected to a series of zenith angles, permitting automated atmospheric measurements without moving the radiometer. A weighted average of 5 years of data provided the thermodynamic temperature of the CMB at 3.0 cm of 2.62 $\pm$ 0.06 K. The measurement at 0.21 cm used Very Large Array observations of interstellar ortho-formaldehyde to determine the CMB intensity in molecular clouds toward the giant HII region W51A (G49.5-0.4). Solutions of the radiative transfer problem in the context of a large velocity gradient model provided estimates of the CMB temperature within the foreground clouds. Collisional excitation from neutral hydrogen molecules within the clouds limited the precision of the result. The thermodynamic temperature of the CMB at 0.21 cm is 3.2 $\pm$ 0.9 K. 72 refs., 27 figs., 38 tabs.

37442 (RRK–88-40) **Gravitational lensing and finite beam-width effect on cosmic microwave anisotropies.** Sasaki, Misao; Tomita, Kenji. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Dec 1988. 11p. Order Number DE89790890/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The temperature anisotropies of cosmic microwave background under the influence of gravitational lenses are investigated taking into account the smearing effect due to a finite beam-width of an observational apparatus. In contrast to the zero beam-width case, in which the anisotropies on small angular scales are enhanced by the lens effect, a finite beam-width may smear out the so-enhanced anisotropies and hence can lead to a suppression of the small angular anisotropies. Using a simple model of the temperature fluctuation spectrum at the decoupling epoch, this possibility is examined over various model parameters. It is found that a strong suppression of the anisotropies occurs only in the case when the beam-width is comparable or greater than the intrinsic coherence angle θ_c of the temperature anisotropy and the characteristic deflection angle by gravitational lenses is much larger than θ_c.

37443 (RRK–89-3) **Stochastic dynamics of an inflationary model and initial distribution of universes.** Nambu, Yasusada. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Jan 1989. 32p. Order Number DE89790892/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We investigate the stationary solution of the modified Fokker-Planck equation which governs the global dynamics of the inflation. Contrary to the original FP equation which is for a Hubble horizon size region, we found that the normalizable stationary solution can exist for modified Fokker-Planck equation which is for many Hubble horizon size regions. For a chaotic inflationary model with the potential λpsi^{2n}, we get initial distribution of classical universes using this solution, and discussed the physical meaning of it. Especially for n = 2, this distribution obeys power-law and classical universes which created from the Planck energy region make the fractal structure. Other cases n not = 2, creation of large classical universes are strongly suppressed.

37444 (RRK–89-4) **On a quantized scalar field in some Kantowski-Sachs' universes.** Nariai, Hidekazu. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Jan 1989. 10p. Order Number DE89790893/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

As a sequel to the previous paper on a quantized scalar field in some isotropic universes, a canonically quantized scalar field in several Kantowski-Sachs' universes is searched for. Various bi-scalar propagators for the quantized scalar field are introduced. Especially, the 4-dimensional commutation function (which is uniquely defined) in the Groen universe satisfying the vacuum Einstein equations $R_{\mu\nu} = \Lambda g_{\mu\nu}$ (A: the cosmological constant) is outlined.

37445 (RRK–89-7) **Wormhole instanton solution in the Einstein-Yang-Mills system.** Hosoya, Akio; Ogura, Waichi. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Jan 1989. 10p. (INS–733). Order Number DE89790895/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

A spherical symmetric classical solution of the Einstein and the SU(2) Yang-Mills equations is found in the four dimensional Euclidean space-time with the cosmological constant. The isospinor fermion has zero modes. Their cosmological implications are also discussed with an emphasis on the fact that wormhole instantons in general can be found not only in the sub-Planck physics but also in almost all the stages in lower energy physics.

37446 Millimeter wavelength observations of SS 433 and its environs. Band, D.L. (Lawrence Livermore National Laboratory, CA (USA)); Gordon, M.A. *Astrophysical Journal (USA)*, 338: 945-951 (Mar 1989).

Millimeter-wave continuum and CO spectral line observations of SS 433 and the IRAS-detected infrared objects in the vicinity of SS 433 are reported. The 90 GHz flux from SS 433 was 0.087 + or - 0.037 Jy, consistent with an extrapolation of the lower frequency radio power-law spectrum. A 203 GHz upper limit for SS 433 is determined. Upper limits only were derived for two of the infrared objects at 90 and 203 GHz. The (C-12)O spectral lines from four of the infrared objects to the west of SS 433 were detected in the same velocity range as the western optical filaments and the nearby H II region S74. The masses and H2 column densities derived from the (C-12)O and (C-13)O lines are consistent with dark molecular clouds. It is suggested that the infrared sources and S74 are part of a gas complex in front of SS 433 and W50. 36 references.

37447 (AD-A–204693/6/XAB) **Snapshots of high-latitude electrodynamics using Viking and DMSP f7 observations.** Marklund, G.T.; Blomberg, L.G.; Stasiewicz, K.; Murphree, J.S.; Pottelette, R. Air Force Geophysics Lab., Hanscom AFB, MA (USA). 1 Dec 1988. 16p. (AFGL-TR–89-0040). Available from NTIS, PC A03/MF A01.

Pub. in Jnl. of Geophysical Research, Vol. 93, No. A12, 14,479-14,492(1 Dec 1988).

Simultaneous observations by the Viking and the DMSP F7 satellites were used as input to a new method to obtain snapshot pictures of the auroral electrodynamics. In particular, an instantaneous global equipotential (or convection) pattern is calculated from distributions of field-aligned current and conductivity which are qualitatively consistent with the Viking auroral imager data and quantitatively consistent with magnetic field and particle data from the two satellites. This convection pattern, which is of the normal two-cell type, with a weak dusk cell and a strong, elongated crescent-shaped dawn cell (consistent with positive interplanetary magnetic field By), agrees well with the Viking electric-field data. The model and the observed potential profiles agree nicely along

the entire Viking orbit except for two intervals above acceleration regions where deviations are to be expected (due to parallel electric fields). These regions are characterized by U-shaped potential minima, upward field-aligned currents, upgoing ion beams, and relatively intense auroral kilometric radiation. Thus, the model results are consistent with the Viking observations not only on a global scale but also on the scale of the auroral acceleration regions. The corresponding convection in the magnetosphere is obtained from a simple projection to the equatorial plane of the deduced two-cell convection pattern. From this the location of the plasmapause is inferred.

37448 (AD-A-204699/3/XAB) **Global density specification in the lower thermosphere. Final report, 15 June 1985-17 June 1988.** Forbes, J.M. Boston Univ., MA (USA). 31 Aug 1988. 20p. Available from NTIS, PC A03/MF A01.

Energetic inputs were derived from various satellite measurements and ground-based sensors for input into the Thermosphere General Circulation Model (TGCM) simulation of the magnetic storm occurring on March 22, 1979. The simulation was compared with thermospheric densities and winds measured from an Air Force satellite, and incoherent-scatter-radar measurements of thermospheric temperatures. An evaluation of the overall performance of the model and various physical processes accounting for discrepancies with data was performed. A FORTRAN program was developed to perform wave/spectral analyses of density data from the Satellite Electrostatic Triaxial Accelerometer (SETA) instrument using the maximum entropy method. The program was applied to a subset of available SETA data to illustrate typical wave characteristics for geomagnetically quiet and disturbed conditions. A climatological summary was performed of the average magnetic activity dependences of high-latitude thermospheric winds and densities below 200 km using SETA data from the March/April, 1979, period.

37449 (AD-A-204855/1/XAB) **Investigation of the production of nitric oxide by soft solar x rays in the e-region of the ionosphere. Master's thesis.** Dumas, R.A. Naval Postgraduate School, Monterey, CA (USA). Dec 1988. 65p. Available from NTIS, PC A04/MF A01.

The production of nitric oxide by soft solar X rays in the E region of the ionosphere is investigated. An empirical expression for the variation in X ray flux as a function of F10.7 is determined. This expression is incorporated into a one-dimensional diffusive photochemical model to compute nitric oxide densities. The results of these calculations are compared with NO observations from the Solar Mesosphere Explorer satellite. Variations of X-ray flux by a factor of 30 over the solar cycle can explain the observed variation in nitric oxide densities.

37450 (AD-A-204902/1/XAB) **Path-integral formulation of ion heating.** Crew, G.B.; Chang, T. Massachusetts Inst. of Tech., Cambridge, MA (USA). Center for Space Research. Nov 1986. 16p. Available from NTIS, PC A03/MF A01.

Pub. in Physics of Fluid, Vol. 31, No. 11, 3425-3439(Nov 1988).

A description of the generation and evolution of ionospheric oxygen-ion conic distributions by electromagnetic ion-cyclotron-resonance heating is formulated in terms of a path integral. All of the relevant physics is contained in this path integral, which may be used to calculate measurable properties of the conic distribution. Although the presentation is applied to this specific ionospheric context, the treatment may be generalized to treat other diffusion problems of interest.

37451 (AD-A-205145/6/XAB) **Theoretical modeling of plasma waves in the magnetosphere. Final report, 1 October 1982-30 September 1988.** Patel, V.L. Denver Univ., CO (USA). Dept. of Physics. Oct 1988. 7p. Available from NTIS, PC A02/MF A01.

Theoretical studies of plasma waves play an important role in the understanding of characteristics of the problems of communications in the ionized environments of the earth. This project devoted efforts in the study of low-frequency waves in the ionosphere and the magnetosphere. The aim was to include all recent attributes of the magnetospheric plasma, e.g., inhomogeneity, various ion species, and finite-beta effects in the theoretical modes. All of these features of the plasma medium affect the communication in various frequency ranges.

37452 (AD-A-205193/6/XAB) **Electron-density profiles and plasma-drift measurements with digital ionosondes. Technical report, July 1987-June 1988.** Reinisch, B.W.; Buchau, J.; Gamache, R.R.; Bibl, K.; Sales, G.S. Lowell Univ., MA (USA). Center for Atmospheric Research. Sep 1988. 31p. (ULRF-442/CAR). Available from NTIS, PC A03/MF A01.

Knowledge of the three-dimensional electron-density distribution and the plasma drift in the earth's ionosphere is needed for the radio communication engineer and the geophysicist. The combination of global models, e.g. the International Reference Ionosphere (IRI), modern digital ionosondes, and relatively powerful micro-computers provide the capabilities to overcome the limitations that have heretofore prevented real-time ionospheric specification and improved forecasting techniques. The developing network of digital ionosondes provides an improved ionogram data set. The cumbersome evaluation of electron density profiles (EDP), from the ionograms, has been eased with automatic ionogram scaling and related microcomputer-based algorithms for calculating EDPs. The purpose of this report is to summarize the evolving network of digital ionosondes based on the Digisonde 256 technology and to present techniques that have been developed for calculating electron-density profiles and determining the drift velocities. In addition, examples are presented to illustrate related data summaries that can be developed and tailored to the needs of the communication or radar-system manager and to the needs of the geophysicist involved in basic and applied research in solar-terrestrial physics.

37453 (IRF-194) **Investigations of auroral dynamics: techniques and results.** Steen, Aa. Swedish Inst. of Space Physics, Kiruna (Sweden). Oct 1988. 30p. Order Number DE89617988/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

This study is an experimental investigation of the dynamics of the aurora, describing both the systems developed for the optical measurements and the results obtained. It is found that during a auroral arc deformation, a fold travelling eastward along the arc is associated with an enhanced F-region ion temperature of 2700 K, measured by EISCAT, indicative of enhanced ionspheric electric fields. It is shown that for an auroral break-up, the large-scale westward travelling surge (WTS) is the last developed spiral in a sequence of spiral formations. It is proposed that the Kelvin-Helmholtz instability is the responsible process. In another event it is shown that large-amplitude long-lasting pulsations, observed both in ground-based magnetic field and photometer recordings, correspond to strong modulations of the particle intensity at the equatorial orbit (6.6 Re). In this event a gradual transition occurs between pulses classified as Ps6/auroral torches toward pulses with characteristics of substorms. The observations are explained by the Kelvin-Helmholtz instability in a magnetospheric boundary layer. The meridional neutral wind, at about 240 km altitude, is found to be reduced prior to or at the onset of auroral activity. These findings are suggestive of large-scale reconfigurations of the ionspheric electric fields prior to auroral onsets. A new real time triangulation technique developed to determine the altitude of auroral arcs is presented, and an alternative method to analyze incoherent scatter data is discussed. (With 46 refs.)

37454 (IRF-196) **Scientific results from the Swedish Viking satellite: A 1988 status report.** Hultqvist, B. Swedish Inst. of Space Physics, Kiruna (Sweden). May 1988. 36p. Order Number DE89617989/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The contributions of the Viking mission to space physics up to the early spring of 1988 are summarized in the following areas: global distribution of magnetosphere-ionosphere interaction, auroral morphology and substorm dynamics, heating and expulsion of ionspheric plasma into the magnetosphere, field-aligned acceleration into the ionosphere and wave generation. (With 64 refs.)(L.E.).

37455 (LA-UR-89-1592) **Parallel electric fields in a simulation of magnetotail reconnection and plasmoid evolution.** Hesse, M.; Birn, J. Los Alamos National Lab., NM (USA). 1989. 25p. Sponsored by DOE/ER;NASA. DOE Contract W-7405-ENG-36. (CONF-8903131-1: Chapman conference on the physics of magnetic flux ropes, Hamilton, Bermuda, 27-31 Mar 1989). Order Number DE89012622/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We investigate properties of the electric field component parallel to the magnetic field ($E_{||}$) in a three-dimensional MHD simulation of plasmoid formation and evolution in the magnetotail in the presence of a net dawn-dusk magnetic field component. We emphasize particularly the spatial location of $E_{||}$, the concept of a diffusion zone and the role of $E_{||}$ in accelerating electrons. We find a localization of the region of enhanced $E_{||}$ in all space directions with a strong concentration in the z direction. We identify this region as the diffusion zone, which plays a crucial role in reconnection theory through the local break-down of magnetic flux conservation. The presence of B_y implies a north-south asymmetry of the injection of accelerated particles into the near-earth region, if the net B_y field is strong enough to force particles to follow field lines through the diffusion region. We estimate that for a typical net B_y field this should affect the injection of electrons into the near-earth dawn region, so that precipitation into the northern (southern) hemisphere should dominate for duskward (dawnward) net B_y. In addition, we observe a spatial clottiness of the expected injection of adiabatic particles which could be related to the appearance bright spots in auroras. 12 refs., 9 figs.

37456 (LA-UR–89-1595) **Magnetopause structure and dynamics: Issues for GEM [geospace environment modeling].** Elphic, R.C. Los Alamos National Lab., NM (USA). 1989. 18p. Sponsored by DOE/DP;NASA. DOE Contract W-7405-ENG-36. (CONF-8902115–1: 1. geospace environment modeling (GEM) workshop, San Diego, California, USA, 19-21 Feb 1989). Order Number DE89012620/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Recent multi-spacecraft observations of the magnetopause have allowed us to establish its structure and dynamical behavior. The magnetopause current sheet is thicker than expected, often ten magnetosheath ion gyroradii or more. One very important result has been the confirmation of magnetic reconnection in both its quasi-steady and transient forms. A boundary layer of magnetosheath-like plasma is often, but not always, observed earthward of the magnetopause current layer. There is considerable small-scale magnetic structure within the current layer, suggesting the presence of filamentary currents much smaller than an ion gyroradius. Such micro-structure may be important in particle diffusion and, hence, reconnection. There are many outstanding questions, among them: How does the low latitude boundary layer form? Why is the magnetopause current layer so thick? What is the detailed structure and topology of FTEs? How are quasi-steady and transient reconnection related? The GEM program may help us address these issues. 18 refs., 9 figs.

37457 (LA-UR–89-1848) **Caviton dynamics in strong Langmuir turbulence.** DuBois, D.; Rose, H.A.; Russell, D. Los Alamos National Lab., NM (USA). 1989. 62p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-8905156–1: International Centre for Theoretical Physics conference, Trieste, Italy, 22-26 May 1989). Order Number DE89012635/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

Recent studies based on long time computer simulations of Langmuir turbulence as described by Zakharov's model will be reviewed. These show that for strong to moderate ion sound samping the turbulent energy is dominantly in nonlinear "caviton" excitations which are localized in space and time. A local caviton model will be presented which accounts for the nucleation-collapse-burnout cycles of individual cavitons as well as their space-time correlations. This model is in detailed agreement with many features of the electron density fluctuation spectra in the ionosphere modified by powerful hf waves as measured by incoherent scatter radar. Recently such observations have verified a prediction of the theory that "free" Langmuir waves are emitted in the caviton collapse process. These observations and theoretical considerations also strongly imply that cavitons in the heated ionosphere, under certain conditions, evolve to states in which they are ordered in space and time. The sensitivity of the high frequency Langmuir field dynamics to the low frequency ion density fluctuations and the related caviton nucleation process will be discussed. 40 refs., 19 figs.

37458 (PPPL–2628) **On field line resonances of hydromagnetic Alfven waves in dipole magnetic field.** Chen, Liu; Cowley, S.C. Princeton Univ., NJ (USA). Plasma Physics Lab. Jul 1989. 11p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE89014603/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Using the dipole magnetic field model, we have developed the theory of field line resonances of hydromagnetic Alfven waves in general magnetic field geometries. In this model, the Alfven speed thus varies both perpendicular and parallel to the magnetic field. Specifically, it is found that field line resonances do persist in the dipole model. The corresponding singular solutions near the resonant field lines as well as the natural definition of standing shear Alfven eigenfunctions have also been systematically derived. 11 refs.

37459 **Magnetic field-aligned plasma expansion in critical ionization velocity space experiments.** Singh, N. (Univ. of Alabama at Huntsville, Huntsville, AL (US)). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA)*, 17(2): 116-123 (Apr 1989).

Motivated by the recent Critical Ionization Velocity (CIV) experiments in space, the temporal evolution of a plasma cloud released in an ambient plasma is studied. Time-dependent Vlasov equations for both electrons and ions, along with the Poisson equation for the self-consistent electric field parallel to the ambient magnetic field, are solved. The initial cloud is assumed to consist of cold, warm, and hot electrons with temperatures $T_c \simeq 0.2$ eV, $T_w \simeq 2$ eV, and $T_h \simeq 10$ eV, respectively. It is found that the minor hot electrons escape the cloud, and their velocity distribution function shows the typical time-of-flight dispersion feature - that is, the larger the distance from the cloud, the larger is the average drift velocity of the escaping electrons. The major warm electrons expand along the magnetic field line with the corresponding ion-acoustic speed. The combined effect of the escaping hot electrons and the expanding warm ones sets up an electric potential structure which accelerates the ambient electrons into the cloud. Thus, the energy loss due to the electron escape is partly replenished. The electric field distribution in the potential structure depends on the stage of the evolution; before the rarefaction waves propagating from the edges of the cloud reach its center, the electric fields point into the cloud. After this stage the cloud divides into two subclouds, with each having their own bipolar electric fields. Effects of collisions on the evolution of plasma clouds are also discussed. The relevance of the results seen from the calculations are discussed in the context of recent space experiments on CIV.

37460 (AD-A–201236/7/XAB) **Resonant charge-exchange studies with hyperthermal-energy ion beams: development of multi-detection capabilities and a data acquisition system. Final report, 15 November 1986-14 May 1988.** Cooper, B.H. Cornell Univ., Ithaca, NY (USA). Lab. of Atomic and Solid State Physics. 29 Aug 1988. 12p. Available from NTIS, PC A03/MF A01.

The overall research program described in this report is to investigate the interactions of hyperthermal (10-100 eV) and keV ions with clean and adsorbate-covered metal surfaces. Particular emphasis is placed on the study of ion-surface charge-exchange processes. Progress in instrumentation includes: completion of the general apparatus, the successful production of low phase-space alkali and noble-gas beams ranging in energy from about 10 eV to several keV, completion of two hemispherical analyzers for detecting scattered ions (one with high-resolution capabilities, the other for large angle scattering studies), design details of the position-sensitive pulse-counting detectors for multi-energy detection, and the configuration of a Macintosh II-based data-acquisition system. Scientific progress includes: measurements of 50-eV to 4-keV alkali scattering from clean and cesiated Cu(110), simulations using Hartree-Fock pair potentials that give good agreement with the 100- to 400-eV Na(+) scattering from Cu(110), trajectory analysis to identify peaks in the Na(+) energy spectra, measurements of charge-transfer probabilities for alkalis scattered from (Cu(110)) with low coverages (<1/10 monolayer) of Cs adsorbates, and ongoing development of a model that includes both local and collective effects of the Cs overlayers in determining charge transfer probabilities.

37461 (AD-A-204750/4/XAB) **Physics of spin-polarized atomic vapors. Final report, 1 October 1986-30 April 1988.** Happer, W. Princeton Univ., NJ (USA). 26 May 1988. 4p. Available from NTIS, PC A02/MF A01.

Efforts were focused on the study of spin-polarized atoms, nuclei and electrons during the period covered by this report. Although this work is 6.1 basic research, it has applications to a number of important Air Force problems. For example, the atomic clocks used on the GPS satellite system operate with optically pumped Rb absorption cells, very similar to the ones being investigated in this laboratory. A number of the scientists and engineers working on atomic clocks used by Air Force satellite systems were trained with the support of this grant. The author has participated in recent Air Force advisory panels to review concepts for high-energy-density fuels based on spin polarized atoms and molecules. The insights gained from research sponsored by this grant have been very useful in evaluating these ideas. Recent work has focused on two main areas, the investigation of quadrupolar interactions between spin-polarized noble-gas nuclei and surfaces and the quantitative investigation of how magnetic-field inhomgeneities cause spin relaxation.

37462 (AD-A-205015/1/XAB) **Multiple ionization of xenon by proton impact.** Manson, S.T.; DuBois, R.D. Georgia State Univ., Atlanta, GA (USA). Dept. of Physics. Dec 1987. 5p. Available from NTIS, PC A02/MF A01.

Pub. in Jnl. de Physique, confC9 suppl12 Vol. 48, C9-263-C9-266(Dec 1987).

An experimental and theoretical study of multiple ionization of xenon for 0.2- to 2.0-MeV proton impact was made. Absolute cross sections for producing xenon ions with charges from +1 to +3 were measured, and calculations of subshell cross sections were performed. Experiment and theory are consistent and indicate that multiple ionization of xenon by fast protons occurs via inner-shell ionization. This is in contrast to the lighter noble gases where direct multiple outer shell ionization can be predominant.

37463 (AD-A-205197/7/XAB) **Studies of collisional and nonlinear radiative processes for development of coherent uv and xuv sources. Final report, 30 September 1985-29 September 1988.** Rhodes, C.K.; Boyer, K.; Luk, T.S. Illinois Univ., Chicago, IL (USA). Lab. for Atomic Molecular and Radiation Physics. 17 Nov 1988. 81p. Available from NTIS, PC A05/MF A01.

A laboratory means for generation of ultrahigh-energy-density states of matter, corresponding approximately to 0.1 - 1.0 W/atom at solid density, is currently under development. This enables the production, in a convenient laboratory environment, of energy densities comparable to those occurring in the thermonuclear environments and stellar interiors. The method being developed involves a unique combination of three basic elements. They are (a) a new extremely high-peak-power ultraviolet-laser technology (femtosecond rare gas halogen systems), (b) energy deposition stemming from high-order multiphoton processes, and (c) a mode of channeled propagation that arises in the strong-field regime. The compatibility of these three independent considerations is a key and unique feature of the approach. The use of this technology will permit the study of new realms of atomic phenomena.

37464 (CONF-890618-2) **Multiphoton ionization of $(Xe)_n$ and $(NO)_n$ clusters using a picosecond laser.** Smith, D.B.; Miller, J.C. Oak Ridge National Lab., TN (USA). 1989. 4p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 9. international conference on laser spectroscopy; Bretton Woods, New Hampshire, USA; 18-23 Jun 1989. Order Number DE89014098/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In an effort to extend the application of multiphoton ionization (MPI) spectroscopy to the study of weakly bound systems, we have begun a systematic investigation of picosecond MPI in van der Waals molecules and clusters. To our knowledge no previous picosecond MPI studies of weakly bound systems have been reported. We present here results of picosecond MPI of Xe_n(n = 1-20) and $(NO)_n$(n = 1-4) clusters. Previous MPI studies using nanosecond lasers have not detected the NO cluster series, presumably because of fast dissociation channels. The use of high peak-power allows resonant and non-resonant photon absorption to the ionization limit to compete effectively with fast dissociative processes. 10 refs., 2 figs.

37465 (CONF-890652-1) **Saturation behavior of parametric four-wave mixing due to two-photon interference effect.** Garrett, W.R.; Hart, R.C.; Moore, M.A.; Payne, M.G.; Wunderlich, R.K. Oak Ridge National Lab., TN (USA). Jun 1989. 5p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 6. Rochester conference on coherence and quantum optics; Rochester, NY, USA; 26-28 Jun 1989. Order Number DE89014076/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Strong pumping of "extended" alkali metal vapors near two-photon resonances produces copious stimulated emissions by amplified spontaneous emission or stimulated electronic hyper-Raman scattering, and by phase matched parametric four-wave mixing. The new electromagnetic fields that are generated within the near-resonant nonlinear medium can strongly influence the total atomic response through processes including interferences, level shifting, and population transfer mechanisms. The internally generated fields can, e.g., suppress transition probabilities for processes involving excitations (SEHRS and two-photon excitations) and produce gain saturation for PFWM processes. This paper discusses the saturation behavior. 8 refs., 2 figs.

37466 (CONF-890703-10) **A lithium liquid metal ion source suitable for high voltage terminal applications.** Read, P.M.; Maskrey, J.T.; Alton, G.D. Oak Ridge National Lab., TN (USA). 1989. 12p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From International conference on ion sources; Berkeley, CA, USA; 9-15 Jul 1989. Order Number DE89014096/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Liquid metal ion sources offer potential improvement in lateral resolution over conventionally used gaseous sources for MeV microprobe applications because of their intrinsic brightnesses. The use of a Li liquid metal ion source is particularly attractive because of the increased sensitivity of lithium for detecting hydrogen (hydrogen profiling) and for detecting near surface contaminants through high-resolution Rutherford backscattering spectrometry. However, the technical difficulty of occasional sparking between the needle and extraction electrode requires that the needle of the Li liquid metal ion source be rewetted before reignition can be effected; this problem makes Li liquid metal ion sources of the usual design risky for operation in the insulated high-voltage terminals of accelerators used in such applications. We have designed a reliable, long-lived, Li liquid-metal ion source which has provisions for overcoming this limitation. The design features and performance characteristics of the source are described in this report. 9 refs., 4 figs.

37467 (CONF-890703-12) **A high-intensity plasma-sputter heavy negative ion source.** Alton, G.D.; Mori, Y.; Takagi, A.; Ueno, A.; Fukumoto, S. Oak Ridge National Lab., TN (USA). 1989. 31p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From International conference on ion sources; Berkeley, CA, USA; 9-15 Jul 1989. Order Number DE89014875/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A multicusp magnetic field plasma surface ion source, normally used for H^- ion beam formation, has been modified for the generation of high-intensity, pulsed, heavy negative ion beams suitable for a variety of uses. To date, the source has been utilized to produce mA intensity pulsed beams of more than 24 species. A brief description of the source, and basic pulsed-mode operational data, (e.g., intensity versus cesium oven temperature, sputter probe voltage, and discharge pressure), are given. In addition, illustrative examples of intensity versus time and the mass distributions of ion beams extracted from a number of samples along with emittance data, are also presented. Preliminary results obtained during dc operation of the source under low discharge power conditions suggest that sources of this type may also be used to produce high-intensity (mA) dc beams. The results of these investigations are given, as well, and the technical issues that must be addressed for this mode of operation are discussed. 15 refs., 10 figs., 2 tabs.

37468 (IAEA-R–4434-F) **Implementation of computer programmes for fitting of positron annihilation spectra on "personal computers". Final report for the period 1 May 1986 - 14 June 1988.** Eldrup, M. Risoe National Lab., Roskilde (Denmark); International Atomic Energy Agency, Vienna (Austria). Feb 1989. 9p. Order Number DE89618367/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

A computer programme package was developed for analysis of positron annihilation experimental results. The software is designed for computers running under MS-DOS operating system written in FORTRAN-77 and operates on any personal computer. Three separate modes of spectra evaluation are available. (1) POSITRONFIT is applied to obtain lifetimes and intensities from a lifetime spectrum; (2) RESOLUTION enables the determination of resolution function from measured lifetime spectrum; (3) ACARFIT is intended for fitting of angular correlation curves. For each of these programmes, a separate interactive programme was developed permitting a user-friendly editing of input data. The graphical features permit the display of measured and fitted spectra. The printing and plotting facilities are available.

37469 (INIS-mf–11440, pp. 144-145) **Electron impact fragmentation study of compounds from colour photosensible materials.** Culea, M (Institutul de Tehnologie Izotopica si Moleculara, Cluj-Napoca (Romania)); Palibroda, M.; Moldovan, Z.; Fodor, E.; Vegh, P. Central Inst. of Physics, Bucharest (Romania). 1988. (In Romanian). (CONF-8810372–: Advances in physics, Constanta, Romania, 6-8 Oct 1988). In *Advances in Physics.* Order Number DE89012158/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

A fragmentation study of some compounds from colour photosensible materials ,using metastable ion detection was performed. (authors).

37470 (INIS-SU–94/A, pp. 40-42) **Ionization of Rydberg energy levels of ions at low temperature.** Ragozin, E.N. AN SSSR, Moscow (USSR). Fizicheskij Inst. 1988. (In Russian). In *Experimental and theoretical physics.* Order Number DE89012156/JAW. Available from NTIS (US Sales Only), PC A04/MF A01; INIS.

Kratkie soobshcheniya po fizike.; no. 8.

The paper is aimed at finding the efficiency of radiation-collision ionization/recombination with Rydberg energy levels of ions in the wide range of density values both at high and low values of the electron temperature, as well as at studying dynamics of the processes given. The problem on evaluation of time distribution of populations at plasma constant parameters and initial δ-like level distribution of populations is solved. The mechanism of stage ionization of the Rydberg levels of ions in the dense plasma is established to be effective up to comparatively low temperatures, at which direct ionization by the p level is impossible. 4 refs.; 2 figs.

37471 (IPNO-DRE–87-33(7)) **Experiments on secondary ion emission with multicharged keV ion bombardement.** Della Negra, S.; Depauw, J.; Joret, H.; Le Beyec, Y.; Schweikert, E.A. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1987. 15-18p. (CONF-8709412–: Conference on ion formation from organic solids, Munster, DE, USA, 21-22 Sep 1987). Order Number DE89781426/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

An electron cyclotron resonance ion source was used to study the influence of the incident charge state of keV ions on secondary ion emission. The experiments were run with 18 keV Arn+ ($1 < n < 11$) beams produced by a minimafios source. Various types of targets were bombarded by the ion beam and the sputtered ionized species were identified by time of flight mass spectrometry. The experimental arrangement is detailed and preliminary results are indicated.

37472 (IPNO-DRE–88-17) **Dynamical aspects of violent collisions in Ar + Ag reactions at E/A = 27 MeV.** Rivet, M.F.; Borderie, B.; Jouan, D.; Gregoire, C.; Remaud, B. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 6p. Order Number DE89789223/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

Intermediate-mass fragment studies were found to give an overview of the mechanisms involved in violent collisions between Ar and Ag at E/A = 27 MeV. A comparison is made with semi-classical calculations (Landau-Vlasov) which reproduce experimental observations well and sustain the persistence of dissipative processes at high incident relative velocity ($\sim$ 0.2c).

37473 (LA-UR–89-2164) **Study of atomic physics and population inversions with plasma focus.** Oona, H.; Hodgdon, M.L.; Rickel, D.G.; Freeman, B.L. Los Alamos National Lab., NM (USA). 1989. 7p. Sponsored by Department of Defense. DOE Contract W-7405-ENG-36. (CONF-890710–14: 5. international conference on megagauss magnetic field generation and related topics, Novosibirsk, USSR, 3-7 Jul 1989). Order Number DE89014282/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The plasma focus can be used to generate high temperature and high density plasmas. Neon-like plasmas have previously been studied in Z-pinches and laser produced plasmas as sources for XUV and x-ray lasers. The plasma focus provides a simple and inexpensive source for studying atomic physics of highly ionized atoms. A detailed understanding of atomic physics at high temperatures, densities, and megagauss magnetic fields is necessary for possible x-ray laser designs. Methods that are generally used for obtaining population inversions include collisional ionization of the inner shells of multi-electron atoms and ions, photoexcitation, and electron collisional excitation of ions, collisional combination of ions, and atom-ion resonant charge exchange. We will discuss some possible experiments to help understand the atomic physics under the above condition. Some ideas and calculations will be given to show the feasibility of doing atomic physics relating to x-ray lasers with a plasma focus. 13 refs., 2 figs.

37474 (ORNL/FTR–3275) **[Electron-ion cross beam experiments and ion-atom collisions, Louvain-la-Neuve, Belgium, Paris, France, Utrecht, the Netherlands, and Groeningen, the Netherlands, April 30–May 28, 1989]: Foreign trip report.** Havener, C.C. Oak Ridge National Lab., TN (USA). 12 Jun 1989. 17p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014728/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

To conduct a lecture series at the Universite Catholique de Louvain (UCL) on ion-atom collisions; to participate in an electron-ion crossed beam experiment at UCL; to meet with R. McCarroll and M. Gargaud at Universite Pierre et Marie Curie in order to compare their recent angular scattering calculations with measurements performed at ORNL on the ion-atom merged-beams apparatus; and to discuss ion-surface collisions with A. Niehaus of Rijksuniversiteit Utrecht and R. Morgenstern of Kernfysisch Versneller Instituut.

37475 (PNL-SA–16839) **Electrospray ionization and collision induced dissociation of large multiply charged ions.** Smith, R.D.; Udseth, H.R.; Loo, J.A.; Edmonds, C.G.; Barinaga, C.J. Pacific Northwest Lab., Richland, WA (USA). May 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC06-76RL01830. 37476 (SAND–89-1546C) **Pairing in CuO_2 driven by exchange interactions between carriers and localized Cu spins.** Stechel, E.B.; Jennison, D.R. Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890718–2: International conference on materials and mechanisms of superconductivity - high-temperature superconductors, Stanford, California, USA, 23-28 Jul 1989). Order Number DE89014488/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Calculations using a realistic multi-band extended Hubbard Hamiltonian, which correctly describes the Heisenberg excitation spectrum and superexchange energy of the insulating phase of CuO_2, show that the two largest energies relating to the carrier quasiparticle are the carrier bandwidth (>5 eV) and an exceptionally large ($\sim$3 eV times a density of states factor as in an RKKY interaction) effective exchange energy between a delocalized carrier hole and a localized Cu hole. The Cu holes are found to remain localized in the superconducting materials. Calculations using a

model pairing Hamiltonian show that this exchange energy induces (through partial spin-polarization of the Cu holes) an attraction between carriers. This attraction is strong enough to overcome a realistic Coulomb repulsion, hence leading to net attractive pairing. Triplet p-wave (or possibly singlet d-wave) pairing is implied. 7 refs.

37477 **Structure of Ag, Fe and Ge microclusters.** Montano, P.A. (Brooklyn Coll., NY (USA). Dept. of Physics); Zhao, J.; Ramanathan, M.; Shenoy, G.K.; Schulze, W. *Zeitschrift fuer Physik D: Atoms, Molecules and Clusters (F.R. Germany)*, 12(1-4): 103-105 (Jun 1989). (CONF-8807155–: 4. international symposium on small particles and inorganic clusters (ISSPIC-4), Aix-en-Province, France, 5-9 Jul 1988).

The structures of Ag, Fe and Ge microclusters were determined using EXAFS. The measurements were performed over a wide range of clusters sizes. The clusters were prepared using the gas aggregation technique and isolated in solid argon at 4.2 K. The measurements were performed at the National Synchrotron Light Source (NSLS) at beam line X-18B. A strong contraction of the interatomic distances was observed for Ag dimers and multimers. Silver clusters larger than 12 A mean diameter show a small contraction of the nn distance and a structure consistent with an fcc lattice. By contrast clusters smaller than 12 A show the presence of a small expansion and a strong reduction or absence of nnn in the EXAFS signal. This points towards a different crystallographic structure for Ag microclusters with diameter less than 12 A. In iron clusters we observe a gradual reduction of the nn distance as the cluster size decreases. The interatomic distance for iron dimers was determined to be 1.94 A, in good agreement with earlier measurements. The iron microclusters show a bcc structure down to a mean diameter of 9 A. Iron clusters with 9 A mean diameter show a structure inconsistent with a bcc lattice. The new structure is consistent with an fcc or hcp lattice. The measurements on Ge clusters show the presence of only nearest neighbors. There was clear evidence of temporal annealing as determined by variations in the near edge structure of the K-absorption edge. Absorption edge measurements were also performed for free Ge clusters travelling perpendicular to the direction of the synchrotron radiation beam. The measurements performed on the free clusters were consistent with those obtained for matrix isolated clusters.

37478 (AD-A–204916/1/XAB) **CFD (computational fluid dynamics) research for mini-supercomputers: a Yale/UTRC program. Final report, 15 February 1987-14 October 1988.** Gropp, W.; Schultz, M. Yale Univ., New Haven, CT (USA). Dept. of Computer Science. 9 Jan 1989. 3p. Available from NTIS, PC A02/MF A01.

Research is directed at the application of modern computer technologies, with emphasis on emerging parallel computing techniques to the solution of fluid dynamic problems. CFD algorithms will be developed, implemented, analyzed, and benchmarked on several different architecture parallel computers.

37479 (AD-A–205096/1/XAB) **Computational fluid dynamics (CFD): element-by-element analysis for advanced computers. Final report, 1 April 1987-14 November 1988.** Carey, G.F. Texas Univ., Austin, TX (USA). Dept. of Aerospace Engineering and Engineering Mechanics. 14 Nov 1988. 5p. Available from NTIS, PC A02/MF A01.

This research focused on a class of domain-decomposition techniques for solution of problems in Computational Fluid Dynamics using advanced vector and parallel processors. Particularly considered are finite-element schemes and natural-element schemes and use of the natural-element partition of the domain to construct the decomposition algorithm. This then fits conveniently into the usual framework of finite-element calculations in which the primary loop is the independent calculation and assembly of element-matrix and vector contributions. By recasting the conjugate gradient method at this level, the system matrix need not be assembled and the intensive matrix-vector product step can be completely parallelized. These ideas constitute a major departure from traditional finite element schemes, and it is felt these efforts are a major new development that will strongly influence the technology.

37480 (LA-UR–89-2165) **Applications of the computer codes FLUX2D and PHI3D for the electromagnetic analysis of compressed magnetic field generators and power flow channels.** Hodgdon, M.L.; Oona, H.; Martinez, A.R.; Salon, S.; Wendling, P.; Krahenbuhl, L.; Nicolas, A.; Nicolas, L. Los Alamos National Lab., NM (USA). 1989. 8p. Sponsored by Department of Defense. DOE Contract W-7405-ENG-36. (CONF-890710–13: 5. international conference on megagauss magnetic field generation and related topics, Novosibirsk, USSR, 3-7 Jul 1989). Order Number DE89014281/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We present herein the results of three electromagnetic field problems for compressed magnetic field generators and their associated power flow channels. The first problem is the computation of the transient magnetic field in a two-dimensional model of helical generator during loading. The second problem is the three-dimensional eddy current patterns in a section of an armature beneath a bifurcation point of a helical winding. Our third problem is the calculation of the three-dimensional electrostatic fields in a region known as the post-hole convolute in which a rod connects the inner and outer walls of a system of three concentric cylinders through a hole in the middle cylinder. While analytic solutions exist for many electromagnetic field problems in cases of special and ideal geometries, the solutions of these and similar problems for the proper analysis and design of compressed magnetic field generators and their related hardware require computer simulations. In earlier studies, computer models have been proposed, several based on research oriented hydrocodes to which uncoupled or partially coupled Maxwell's equations solvers are added. Although the hydrocode models address the problem of moving, deformable conductors, they are not useful for electromagnetic analysis, nor can they be considered design tools. For our studies, we take advantage of the commercial, electromagnetic computer-aided design software packages FLUX2D nd PHI3D that were developed for motor manufacturers and utilities industries. 4 refs., 6 figs.

37481 (LA-UR–89-2187) **Instability of concave conductor surfaces at high magnetic pressure.** Parker, J.V.; Bowers, R.L.; Sheppard, M.G.; Weiss, D.L. Los Alamos National Lab., NM (USA). 1989. 18p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890710–3: 5. international conference on megagauss magnetic field generation and related topics, Novosibirsk, USSR, 3-7 Jul 1989). Order Number DE89014277/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

At magnetic fields in excess of a few 100 T the energy dissipation in a conductor surface exceeds the characteristic vaporization energy and the metal conductor is disrupted. The threshold for this process, termed an "electrical explosion" by Demichev and Shneerson, is usually considered to be the field where the magnetic energy density $B_S^2/2\mu_0$ is equal to the volumetric evaporation energy density, Q_S. However, Q_S is not a uniquely defined quantity. Physically, "evaporation" is understood to mean a sufficient reduction in the average density of the conductor so that the resistivity rises to a high value and current flow is reduced. This reduction in density is opposed by the applied magnetic pressure and by the inertia of the material and thus Q_S is a function of both B_S and time. The definition of B_S is, therefore, an implicit one, $B_S = (2\mu Q_S[B_S Kt])^{1/2}$, and prediction of the "electrical explosion" requires a 1-D or 2-D MHD calculation using the complete mechanical and electrical equation of state (EOS) for the conductor material. This paper describes the results of the first experiment in this series and the analysis of the results obtained. The experiment was only partially successful in obtaining the conductor response data sought. During the experiment, an unexpectedly strong instability was observed that we believe may be an important cause of failure in high magnetic field apparatus. 4 refs., 9 figs.

37482 (SAND–88-3037C) **Stress in dilute suspensions.** Passman, S.L. Sandia National Labs., Albuquerque, NM (USA). 1989. 9p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8904231–1: Constitutive relations and

models in continuum theories of multiphase flows, Minneapolis, Minnesota, USA, 4-7 Apr 1989). Order Number DE89012661/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Generally, two types of theory are used to describe the field equations for suspensions. The so-called "postulated" equations are based on the kinetic theory of mixtures, which logically ought to give reasonable equations for solutions. The basis for the use of such theory for suspensions is tenuous, though it at least gives a logical path for mathematical arguments. It has the disadvantage that it leads to a system of equations which is underdetermined, in a sense that can be made precise. On the other hand, the so-called "averaging" theory starts with a determined system, but the very process of averaging renders the resulting system underdetermined. I suggest yet a third type of theory. Here, the kinetic theory of gases is used to motivate continuum equations for the suspended particles. This entails an interpretation of the stress in the particles that is different from the usual one. Classical theory is used to describe the motion of the suspending medium. The result is a determined system for a dilute suspension. Extension of the theory to more concentrated systems is discussed. 14 refs.

37483 (SAND–89-0025C) **MHD calculations of anode plasmas.** Hussey, T.W.; Slutz, S.A.; Desjarlais, M.P. Sandia National Labs., Albuquerque, NM (USA). 1989. 15p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890665–23: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89014485/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We have performed a series of idealized MHD calculations of the response of an anode plasma layer to the rising magnetic field in an applied-B ion diode. The purpose of this study were to consider Joule heating of the plasma layer, which could pose potential problems for lithium ion diodes, and the leakage of flux behind the ion-emitting surface, which is related to impedance collapse. We find that, as induced JxB forces move the plasma toward the wall, the entrained, initial field is compressed until it just equals the rising external field. Achieving such equilibrium decreases both Joule heating and flux leakage into the plasma. For relatively thin (~1 mm) plasma layers at moderate densities (10^{16}–10^{17} cm^{-3}) we calculate that this equilibrium is achieved quite rapidly, leading to acceptably low levels of both flux penetration and Joule heating. 4 refs., 5 figs.

37484 (SAND–89-0046C) **Numerical solution of the Navier-Stokes equations for three-dimensional incompressible flows with open boundaries.** Schutt, J.A. Sandia National Labs., Albuquerque, NM (USA). 1989. 11p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890752–1: 6. international conference on numerical methods in laminar and turbulent flows, Swansea, UK, 11-15 Jul 1989). Order Number DE89009333/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Numerical modeling of the transient, nonisothermal, three-dimensional, incompressible Navier-Stokes equations imposes extreme demands on computational resources. For incompressible flow the Navier-Stokes equations form a coupled parabolic-elliptic set, with the elliptic nature caused by the incompressibility constraint. The elliptic nature of the incompressibility constraint forces some portion of the solution algorithm to be implicit, with the attendant computational costs. In addition, in regions of the computational domain where advective effects overwhelm viscous effects, the Navier-Stokes equations exhibit behavior which is similar to the hyperbolic nature of the Euler (inviscid) equations. In such regions many numerical methods which are suitable for parabolic equations will be dispersive, causing oscillations to appear in the solution. If accurate long-time solutions are required, dispersion must be avoided, as well as excessive numerical diffusion, which can result from attempts to control dispersion. The numerical algorithm presented here attempts to address these issues. 10 refs., 4 figs.

37485 (SAND–89-0780C) **Finite control volume modeling of laminar and turbulent flow of air in an enclosure.** Hogan, R.E.; Kettleborough, C.F. Sandia National Labs., Albuquerque, NM (USA). 1989. 11p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890752–2: 6. international conference on numerical methods in laminar and turbulent flows, Swansea, UK, 11-15 Jul 1989). Order Number DE89009334/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The finite control volume method (FCVM) was successfully used to calculate both laminar and turbulent buoyancy driven flow of air in a square enclosure for $Ra = 10^3$ to 10^8. For laminar flow, comparisons of the computed solution with both experimental data and other numerical solutions are in excellent agreement. Comparisons of selected velocities and average Nusselt numbers with a "benchmark" solution presented by deVahl Davis are consistently within 4%. For turbulent flow, the agreement with another numerical solution is generally good, considering the large difference in the number of nodes employed. The agreement with extrapolated experimental correlations for the average Nusselt number was acceptable. 20 refs., 4 figs., 2 tabs.

37486 (UCID–21696) **Linear theory of uncompensated thermal blooming in turbulence.** Chambers, D.H.; Karr, T.J.; Morris, J.R.; Cramer, P.G.; Viecelli, J.A.; Gautesen, A.K. Lawrence Livermore National Lab., CA (USA). 7 Feb 1989. 33p. Sponsored by Department of Defense. DOE Contract W-7405-ENG-48. Order Number DE89014604/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A linearized theory of small perturbations in thermal blooming gives a surprisingly accurate description of the initial evolution of a plane wave propagating through an absorbing fluid medium. In the case of constant absorption and fluid velocity, a sinusoidal perturbation of the optical field grows quasi-exponentially at a rate determined by its Fresnel number and the accumulated OPD due to blooming. Perturbations with small transverse length scales grow more rapidly than those with large length scales. The evolution of the optical spectrum and Strehl ratio in the presence of optical turbulence is accurately described. The growth of the small scale fluctuations eventually leads to a drop in Strehl. More complicated cases with varying absorption and velocity profiles can be formally analyzed using a WKB approximation. Numerical simulations show growth suppression when the velocity varies along the optical path. These predictions from the linearized theory agree well with results from numerical simulations of the full nonlinear system and thus provides a standard for comparing different numerical codes. 12 refs., 9 figs.

37487 (UCRL–21155) **Nonlinear hydrodynamical innstabilities, transitions, and coherent features: Final report.** Marcus, P.S. Lawrence Livermore National Lab., CA (USA). Jun 1989. 3p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE89014101/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The purpose of the research funded by this grant was to explore strongly nonlinear processes in hydrodynamical flows. To study the flows, large-scale numerical computations were required. Furthermore, each flow that was studied numerically was also examined in a laboratory experiment by another research group. Generally, the laboratory experiments were done after the numerical calculations were completed for the purpose of confirming the results and for exploring other parts of parameter space. Although all of the phenomena that we looked at were rich in nonlinear behavior, they were all bound together with a common thread: they exhibited temporally chaotic behavior while maintaining (or in some instances forming) coherent spatial structure. We summarize our main results in this paper.

37488 (UCRL–100997) **Dynamics of colloidal dispersions via lattice-gas models of an incompressible fluid.** Ladd, A.J.C.; Frenkel, D. Lawrence Livermore National Lab., CA (USA). May 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8902113–1: Cellular automata and modeling of complex physical systems, Les Houches, France, 21 Feb - 2 mar 1989). Order Number DE89013146/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Progress in applying lattice-gas models to the simulation of colloidal dispersions is described. A new set of collision rules for the four-dimensional face-centered-hypercubic lattice, which lead to an exactly isotropic viscosity and which can be implemented with a small table lookup, have been developed. However, they are only suitable for low Reynolds number flows. A new implementation of a

constant-velocity boundary condition for lattice-gas models is described. 8 refs.

37489 XUV laser amplification in recombining laser-produced plasmas. Kiehn, G.P. Thesis (Ph. D.). 156p. Univ. of Oxford, Oxford, England (1987). Available from UMI, Dissertation Information Service, 300 North Zeeb Road, Ann Arbor, MI 48106. BRD-81,570.

Direct measurements of laser amplification in recombining laser-produced plasmas were made in the XUV spectral region and are compared to computational simulations. Recombination pumping establishes population inversions of the Balmer-alpha transition in expanding plasma columns produced by the laser irradiation of thin-fiber targets. Time-resolved spectroscopic analysis of the axial radiation emission from the plasma clearly demonstrates the amplification of spontaneous emission in carbon and fluorine plasmas. The amplification of the Balmer-alpha transition was determined through several different diagnostic techniques, including the exponential growth of axial intensity with plasma length, studies of the temporal behavior of the line emission, and axial-to-transverse spectroscopic comparisons. The absolute calibration of the spectroscopic diagnostic allows the experimental results to be directly compared to numerical simulations obtained from a time dependent atomic physics package coupled to a one-dimensional hydrodynamic code.

37490 Glueballs, hybrids, and exotic hadrons. AIP (Am. Inst. Phys.) Conf. Proc., No. 185. Chung, Suh-Urk (ed.). 729p. American Institute of Physics, New York, NY (1989). Sponsored by DOE/ER;OUS. From BNL workshop on glueballs, hybrids and exotic hadrons; Upton, New York, USA; 29 Aug - 1 sep 1988.

The Workshop on Glueballs, Hybrids, and Exotic Hadrons was held at BNL from August 29 through September 1, 1988. The emphasis was on bringing up-to-date the current status of hadron spectroscopy and on exploring experimental means of searching for states which lie beyond the realm of conventional quarkonia. General topics discussed are: gluonic states; exotic states; heavy flavors; conventional hadron; spectroscopy; lattice gauge; and future experiments, detectors and facilities.

37491 (DOE/ER/00881–T1) **Proposed activity - Budget for research in high energy physics: Technical progress report, January 1, 1990–December 31, 1994.** Barger, V.; Camerini, U.; Carlsmith, D.; Durand, B.; Durand, L.; Erwin, A.; Fry, W.; Goebel, C.; Halzen, F.; Loveless, R. Wisconsin Univ., Madison, WI (USA). 1989. 415p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER00881. Order Number DE89014506/JAW. Available from NTIS, PC A18/MF A01 - OSTI; GPO Dep.

This paper contains task reports on the following topics: Hadron physics at Fermilab; Lepton hadron scattering; Electroweak and weak interactions at the Stanford Linear Accelerator Center; Hyperon beam program/hadroproduction of heavy flavors at Fermilab; High energy physics colliding beam detector facility at Fermilab; Data analysis facility; Institute for Elementary Particle Physics research; Study of weak and electromagnetic interactions at Desy and Cern; Theoretical high energy physics; Dumand; and Ultra high energy gamma rays. This work has been going on for several years and has encompassed many aspects of the field, including algorithms, machines, theoretical studies and large scale simulations. This last year we made progress in the following areas: studies of QCD including the effects of dynamical fermions, large scale simulations (in particular the calculation of matrix elements for hadronic weak interactions), and in new algorithms. We describe these in this paper.

37493 (DOE/ER/03130–425) **Progress report for a research program in theoretical high energy physics.** Feldman, D.; Fried, H.M.; Jevicki, A.; Kang, Kyungsik; Tan, Chung-I. Brown Univ., Providence, RI (USA). Dept. of Physics. 30 Jun 1989. 26p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER03130. Order Number DE89013963/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This year's research has dealt with: superstrings in the early universe; the invisible axion emissions from SN1987A; quartic interaction in Witten's superstring field theory; W-boson associated multiplicity and the dual parton model; cosmic strings and galaxy formation; cosmic strings and baryogenesis; quark flavor mixing; $p - \bar{p}$ scattering at TeV energies; random surfaces; ordered exponentials and differential equations; initial value and back-reaction problems in quantum field theory; string field theory and Weyl invariance; the renormalization group and string field theory; the evolution of scalar fields in an inflationary universe, with and without the effects of gravitational perturbations; cosmic string catalysis of skyrmion decay; inflation and cosmic strings from dynamical symmetry breaking; the physic of flavor mixing; string-inspired cosmology; strings at high-energy densities and complex temperatures; the problem of non-locality in string theory; string statistical mechanics; large-scale structures with cosmic strings and neutrinos; the delta expansion for stochastic quantization; high-energy neutrino flux from ordinary cosmic strings; a physical picture of loop bremsstrahlung; cylindrically-symmetric solutions of four-dimensional sigma models; large-scale structure with hot dark matter and cosmic strings; the unitarization of the odderon; string thermodynamics and conservation laws; the dependence of inflationary-universe models on initial conditions; the delta expansion and local gauge invariance; particle physics and galaxy formation; chaotic inflation with metric and matter perturbations; grand-unified theories, galaxy formation, and large-scale structure; neutrino clustering in cosmic-string-induced wakes; and infrared approximations to nonlinear differential equations. 17 refs.

Available from NTIS, PC A14/MF A01 - OSTI.

This report contains viewgraphs on the following topics: rare and forbidden K decays; CP violation in the K system; the status of current experiments at BNL, CERN, FNAL, and KEK; and future experiments and facilities.

37498 (CONF-8905143–2) **Probing nuclear currents with dilepton production in ultrarelativistic heavy-ion collisions.** Bottcher, C.; Strayer, M.R.; Albert, C.; Ernst, D.J. Oak Ridge National Lab., TN (USA). 1989. 9p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From NATO international advanced courses on the nuclear equation of state; Peniscola, Spain; 12 May - 3 jun 1989. Order Number DE89014094/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In this paper we discuss the coherent production of μ and τ pairs perturbatively in the two-photon limit. Previous calculations of cross sections have been reported using the Weizsaecker-Williams method; however, serious objections have been raised to the use of such methods. Approaches which do not impose the constraint that the photons are "on-shell" usually give different results due to the breakdown of the equivalent photon approximation. The breakdown of the equivalent photon approximation usually occurs at the same level as the coupling to the nuclear currents. For example, nucleons in nuclei can "carry" a large momentum. Form factors controlling the coupling of protons to photons regulate the magnitude of the pair vertex. In the Weizsaecker-Williams method, these form factors cannot be treated properly. Even though the pair production is nonperturbative at the highest energies, the introduction of nucleon form factors tends to regularize perturbation theory, and Feynman theory can be used to address details of the hadron-photon couplings and their effect on the dilepton cross sections. Calculations of this type have been used to study anomalous electron pair production in π^-p collisions. In the present work we shall use perturbation theory to study μ and τ lepton production and to explore the sensitivity of the cross sections to a range of plausible models for the nuclear form factors. 13 refs., 6 figs.

37499 (DOE/ER/03130–46C) **Elastic scattering of muon-neutrinos and muon-anti-neutrinos by electrons.** Abe, K.; Ahrens, L.A.; Amako, K.; Aronson, S.H.; Beier, E.W.; Callas, J.L.; Cutts, D.; Diwan, M.V.; Durkin, L.S.; Gibbard, B.G. Brown Univ., Providence, RI (USA). 1989. 4p. Sponsored by DOE/ER;FOR. DOE Contract AC02-76ER03130. (CONF-8904226–3: 12. international workshop on weak interactions and neutrinos, Ginosar, Israel, 9-14 Apr 1989). Order Number DE89013957/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Final results are presented from an experiment on elastic scattering of neutrinos by electrons. New determinations of the electro-weak mixing parameter, $\sin^2\theta_W$, are made using both total and differential cross sections. Limits are set on possible electromagnetic structure of the muon-neutrino. 7 refs., 2 figs., 1 tab.

37500 (DOE/ER/03130–50C) **Progress report of a research program in experimental high energy physics, January 1, 1989–December 31, 1989.** Lanou, R.E. Jr.; Cutts, D. Brown Univ., Providence, RI (USA). Dept. of Physics. 1 Jul 1989. 33p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER03130. (COO–3130TC-50). Order Number DE89013962/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

An experimental program in strong and electro-weak interaction physics of elementary particles is being carried out using electronic detection techniques. Experiments have been performed at Brown, Brookhaven, and Fermilab. The work described in this report by the Electronic Detector Group addresses the following: electroweak parameters via neutrino interactions, preparations for experiments ("D-ZERO") at the FNAL 2 TeV $\bar{p}p$ Collider, new detection techniques for neutrino properties.

37501 (DOE/ER/03130–267) **Progress report of a research program in experimental high energy physics: Task B: Progress report, January 1–December 31, 1989.** Widgoff, M. Brown Univ., Providence, RI (USA). Dept. of Physics. 1 Jul 1989. 31p. Sponsored by DOE Energy Research. DOE Contract AC02-76ER03130. Order Number DE89013950/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

The group at Brown has joined a collaboration to carry out experiments in high energy physics using astrophysical sources, in the new underground laboratory at Gran Sasso. We are building a detector (LVD) which includes a large volume of liquid scintillator together with a multilayered omnidirectional tracking system of high spatial and angular resolution, in order to study particle physics in a domain beyond the range of accelerators now or soon to be available. Among the physics questions we will be able to address very effectively are neutrino oscillations, discrete sources of high energy radiation including muons and neutrinos, dark matter and exotic particles, neutrinos from stellar collapse, and monopoles. The hybrid detector built by the E745 Collaboration, with the Tohoku one-meter holographic freon bubble chamber as target, had a second successful run at the Tevatron during 1987, the film from which is being analyzed. The production of neutral strange particles by muon neutrinos at Tevatron energies has been investigated using the data from the 1985 run, and this study will be greatly enhanced by the addition of the events from the 1987 run. Other physics topics include a new method of observing an EMC-like effect in the muon neutrino data. A new experiment has been approved (E782) to study the interactions of muons from the Tevatron, using the E745 hybrid system, and we have been preparing for the run scheduled to begin in January 1990. During the past year, analysis has continued both on the data of our experiments concerning interactions of hadrons with protons and heavier nuclei and on the data of SLAC experiments BC72/73/75, studying the interactions in hydrogen of 20 GeV polarized photons.

37502 (DOE/ER/40150–74) **Parity violation workshop.** Siegel, R. (ed.). Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility. Feb 1987. 325p. Sponsored by DOE Energy Research. DOE Contract AC05-84ER40150. (CONF-861277–: Parity violation workshop - CEBAF, Newport News, VA, USA, 11-12 Dec 1986). Order Number DE89014431/JAW. Available from NTIS, PC A14/MF A01 - OSTI.

This report contains papers on the following: the Bates parity violation experiment; parity violation in the nuclear domain; the weak neutral current in the standard model; measurement of parity nonconservation in the proton-proton total cross section at 800 MeV; $p(\vec{e},e)p$ in the standard model; physics and technology of polarized sources; injector for polarized electrons at CEBAF; measurement of the electron beam polarization; high power cryogenic targets; focusing toroidal spectrometer for parity violation experiments; solenoidal field spectrometer for parity violation experiments; experimental areas and spectrometer costs; problems of neutron form factors, reducing spurious asymmetries in parity experiments, and proposed parity experiment at CEBAF; asymmetries in the LAMPF parity experiment; and parity violation in the photodisintegration of deuterium.

37503 (DOE/ER/40315–156) **Hyperon production with antiprotons.** Barnes, P.D.; Birien, P.; Bonner, B.E.; Breunlich, W.; Diebold, G.; Dutty, W.; Eisenstein, R.A.; Ericsson, G.; Eyrich, W.; von Frankenberg, R. PS185 Collaboration. Carnegie-Mellon Univ.,

Pittsburgh, PA (USA). 1989. 13p. Sponsored by DOE Energy Research. DOE Contract FG02-87ER40315. Order Number DE89014470/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Precision measurements of hyperon-antihyperon production with antiprotons permit detailed tests of strange quark pair production and decay. Recent measurements at LEAR of lambda-antilambda production are compared with selected calculations. A recent search in the K_sK_s channel for $\xi(2230)$ formation and possible future searches for CP nonconservation in the lambda-antilambda system are also discussed. 17 refs., 13 figs.

37504 (DOE/ER/40315–158) **Lambda-antilambda decay asymmetries and CP violation.** Hertzog, D.W.; Barnes, P.D.; Birien, P.; Bonner, B.E.; Breunlich, W.; Diebold, G.; Dutty, W.; Eisenstein, R.A.; Ericsson, G.; Eyrich, W. PS185 collaboration. Carnegie-Mellon Univ., Pittsburgh, PA (USA). 1988. 9p. Sponsored by DOE Energy Research. DOE Contract FG02-87ER40315. (CONF-880983–38: 8. international symposium on high energy spin physics, Minneapolis, MN, USA, 12-17 Sep 1988). Order Number DE89014472/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The exclusive reaction $\bar{p}p \rightarrow \bar{\Lambda}\Lambda$ is an interesting laboratory in which to study both spin physics and fundamental symmetries. The PS185 collaboration at LEAR has been exploiting this fact for the last few years in an ongoing program of hyperon-antihyperon production. The motivation for this study will be outlined and the experimental technique will be described. Spin physics aspects such as the measurements of the outgoing hyperon polarization and preliminary determinations of spin correlation coefficients will be presented. Fundamental symmetry checks such as lifetime differences between Λ and $\bar{\Lambda}$ (CPT) and decay properties (CP) will be discussed. A future experiment which is quite sensitive to CP violation in a hyperon-antihyperon system will be mentioned. 15 refs., 4 figs.

37505 (DOE/ER/40315–159) **Strangeness production with antiprotons at LEAR.** Barnes, P.D.; Birien, P.; Bonner, B.E.; Breunlich, W.H.; Diebold, G.; Dutty, W.; Eisenstein, R.A.; Ericsson, G.; Eyrich, W.; Fischer, H. Carnegie-Mellon Univ., Pittsburgh, PA (USA); Freiburg Univ. (Germany, F.R.). Fakultaet fuer Physik. 3 Nov 1988. 13p. Sponsored by DOE Energy Research. DOE Contract FG02-87ER40315. (CONF-8809218–3: 9. European symposium on antiproton-proton interactions and fundamental symmetries, Mainz, Germany, F.R., 5-9 Sep 1988). Order Number DE89014473/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The reaction $\bar{p}p \rightarrow \bar{Y}Y$ is being investigated at LEAR in the energy range from threshold up to 2.0 GeV/c. Integrated and differential cross sections as well as polarizations have been measured at six energies for the $\bar{\Lambda}\Lambda$ channel. At 1.546 GeV/c also spin correlations have been determined. The results are discussed and compared with different theoretical predictions. First and preliminary results on the reaction $\bar{p}p \rightarrow K_sK_s$ in the energy range of the hypothetical $\xi(2232)$ resonance are presented. The cross section is flat, and shows no indication of a structure. 26 refs., 12 figs.

37506 (DOE/ER/40323–T2) **Medium energy meson research.** Crowe, K.M. California Univ., Berkeley, CA (USA). Dept. of Physics. [1989]. 17p. Sponsored by DOE Energy Research. DOE Contract FG03-87ER40323. Order Number DE89014124/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The measurements completed in major runs up to 1987 have been under detailed analysis. The experiments discussed in this paper are: pion-helium scattering; proton pion bremsstrahlung; muon decay spectrum-η; muon catalyzed fusion; and Crystal Barrel jet drift chamber.

37507 (GSI–89-33(prepr.)) **Search for resonant Bhabha scattering at MeV energies.** Tsertos, H. Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.). Apr 1989. 15p. (CONF-8903138–: ILL workshop on fundamental physics with slow neutrons, Grenoble, France, 8-11 Mar 1989). Available from Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.).

A series of investigations on Bhabha scattering has been carried out in the last two years, searching for possible neutral resonances in the invariant mass range between 1.5 and 1.9 MeV/c^2, as motivated by the heavy-ion experiments at GSI. The currently highest sensitivity has been achieved by an experiment performed at ILL using the BILL β spectrometer to produce monoenergetic positrons and a high-resolution multidetector device. With systematic and statistical uncertainties of less than 0.25%, no evidence for any resonance was found around 1.8 MeV/c^2. The 97%-confidence upper limit on the intrinsic width and lifetime of a hypothetical spinless resonance is 1.9 meV and 3.5×10^{-13} s, respectively, establishing the most stringent bound for new particles in this mass region.

37508 (INIS-mf–11456, pp. 413-416) **Experiments with one-meter hydrogen bubble chamber in beams of relativistic light nuclei.** Sandor, L. (Slovenska Akademia Vied, Kosice (Czechoslovakia). Ustav Experimentalnej Fyziky); Urban, J. Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia). 1987. (In Slovak). (CONF-8707217–: 9. conference of Czechoslovak physicists, Pardubice, Czechoslovakia, 6-10 Jul 1987). In *Ninth conference of Czechoslovak physicists. Part 1, 2.* Order Number DE89617602/JAW. Available from NTIS (US Sales Only), PC A22/MF A01 - OSTI; INIS.

The experiment is described in which the interaction was studied of a beam of relativistic ^{4}He nuclei with H in a one–metre bubble chamber. The experiment was carried out at the synchrophasotron at the JINR in Dubna. The processes were analyzed of fragmentation of helium nuclei on protons in the energy range of 2 to 4 GeV/nucleon. Some results are given of the study of the exclusive process ^{4}Hep->dppn at a ^{4}He momentum of 8.6 GeV/c when 40,000 interactions were analyzed. (Z.J.). 3 figs., 14 refs.

37509 (LAL–88-14) **Neutrino counting in single photon experiments.** Grivaz, J.F. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Jun 1988. 4p. (CONF-8803109–: 23. Rencontre de Moriond conference: electroweak interactions and unified theories, Les Arcs, France, 6-12 Mar 1988). Order Number DE89776419/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The results from single photon experiments are reviewed and combined. The 90 % CL upper limit on the number of light neutrino species is 4.6, and the 90 % CL lower limit on the mass of two degenerate scalar electrons is 68.5 GeV for massless photinos.

37510 (LA-UR–89-1751) **Physics with ETA mesons.** Liu, Lon-chang. Los Alamos National Lab., NM (USA). 1989. 16p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8904233–1: Symposium on pion-nucleon and nucleon-nucleon physics, Leningrad, USSR, 22-27 Apr 1989). Order Number DE89012582/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Since the advent of pion factories, an impressive amount of information about the nuclear dynamics of the $\Delta(1232)$ pion- nucleon resonance has been obtained. The study of this isospin-3/2 resonance has greatly benefited from the fact that π^-n and π^+p systems are pure I = 3/2 states, which couple only to the Δ in the resonance region. Such isospin selectivity of the pion does not exist, however, for the I = 1/2 N* resonances because it is not possible to form a pure I = 1/2 state with a pion and a nucleon. Eta mesons have zero isospin. Consequently, the ηN systems are in a pure I = 1/2 state, and η can be used to tag those N* resonances to which it strongly couples. We will briefly review the πN interaction from the threshold region to c.m. energy $\sqrt{s} \simeq 1600$ MeV. We shall see how improved πN data can help the study of πN interactions. I shall discuss what new information about the hadronic interaction can be learned from the study of eta production in pp collisions. The behavior of eta meson in nuclei will be discussed. The interesting question of the quark structure of $\eta(549)$ and $\eta\prime(958)$ will also be discussed within the framework of a simple model. 19 refs., 13 figs.

37511 (LA-UR–89-1871) **Neutrino mass experiments.** Robertson, R.G.H. Los Alamos National Lab., NM (USA). 1989. 14p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-8904234–1: 10. and final workshop on grand unification, Chapel Hill, North Carolina, USA, 20-22 Apr 1989). Order Number DE89013464/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The current status of the experimental search for neutrino mass is reviewed, with emphasis on direct kinematic methods. Simpson and Hime report finding new evidence for a 17-keV neutrino in the β decay of ^3H and ^{35}S. The situation concerning the electron neutrino mass as measured in tritium beta decay has not changed significantly in the last two years. We discuss the "model independent" lower limit of 17 eV obtained by the ITEP group in light of existing data on the ^3H–^3He mass difference. 42 refs., 1 fig., 1 tab.

37512 (LA-UR–89-1892) **$K^0_L \rightarrow \mu\mu$ polarization: Future prospects.** Sanders, G.H. Los Alamos National Lab., NM (USA). 1989. 9p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8903132–5: 24. Rencontres de Moriond: electroweak interactions and unified theories, Les Arcs, France, 5-12 Mar 1989). Order Number DE89014239/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The observation of polarized muons in the final state of the decay $K^0_L \rightarrow \mu\mu$ would be an indication of a new CP-noninvariant interaction. The theoretical literature describes a variety of physics mechanisms and many models in which such polarization may appear above the Standard Model background. We review this literature and describe experimental possibilities for carrying out the search for this publication. 19 refs., 7 figs., 1 tab.

37513 (SLAC-PUB–4816) **Z^0 physics at the SLC.** Dorfan, J.M. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Feb 1989. 69p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8808232–1: Banff summer institute on particles and fields; NATO Advanced Study Institute on techniques and concepts of high energy physics, Banff, Canada; St. Croix, Virgin Islands (U.S.), 14-27 Aug 1988; 14-25 jul 1988;CONF-880717–1). Order Number DE89013749/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper discusses the following topics: the standard model and its application to $e^+e^- \rightarrow Z^0 \rightarrow t\bar{t}$; detector requirements; the upgraded MARKII detector; the physics measurements; searching for the top quark; is there a fourth generation?; Searching for Higgs scalars; and physics beyond the minimal standard model. 13 refs., 34 figs., 11 tabs.

37514 (SLAC-PUB–4985) **Review of "close-mass" heavy lepton searches.** Riles, K. Mark II Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (USA). May 1989. 11p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8903132–1: 24. Rencontres de Moriond: electroweak interactions and unified theories, Les Arcs, France, 5-12 Mar 1989). Order Number DE89014591/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Results from recent searches in e^+e^- annihilation at PEP ($\sqrt{s}$ = 29 GeV) for a fourth-generation charged lepton associated with a slightly lighter neutrino partner are presented. Some emphasis is given to the most recent search, which uses a novel approach based on radiative tagging, an approach that holds promise as a general tool in searching for exotic events characterized by very low visible energy. Prospects for upcoming sequential lepton searches at SLC and LEP experiments are also discussed. 11 refs., 4 figs.

37515 **Charm physics.** Purohit, M. V. (Fermi National Accelerator Laboratory, Batavia, IL 60510(US)). *AIP (American Institute of Physics) Conference Proceedings (USA),* 185(1): 541-550 (25 Apr 1989). (CONF-880862–: BNL workshop on glueballs, hybrids and exotic hadrons, Upton, NY, USA, 29 Aug - 1 sep 1988).

The status of charm physics with emphasis on recent high statistics results from fixed target experiments is presented. The topics covered include charm production, $D^0\bar{D}0 mixing, charm baryons and excited states such as the D^{**}$. Also reviewed are charm decays: hadronic, leptonic as well as semileptonic. Finally, we take a brief look at charm lifetimes before concluding with a look to the future.

37516 (CBPF-NF–054/88) **Predictions about the decays of the B-mesons.** Bediaga, I.; Correa, A.; Predazzi, E. Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro, RJ (Brazil). 1988. 16p. (DFTT–19/88). Order Number DE89612602/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Extrapolating to the b sector a model applied to charm decay, the differences expected between B^0_s, B^0_d and B^-_u lifetimes are discussed. No significative differences (<= 5 ~10%) are predicted.

37517 (FNAL/C–89/104-A) **Windows on the axion.** Turner, M.S. Fermi National Accelerator Lab., Batavia, IL (USA). Apr 1989. 39p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-8904224–1: Cosmic axion workshop, Upton, New York, USA, 13-14 Apr 1989). Order Number DE89013151/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Peccei-Quinn symmetry with attendant axion is a most compelling, and perhaps the most minimal, extension of the standard model, as it provides a very elegant solution to the nagging strong CP-problem associated with the Θ vacuum structure of QCD. However, particle physics gives little guidance as to the axion mass; a priori, the plausible values span the range: 10^{-12} eV $\lesssim m_a \lesssim 10^6$ eV, some 18 orders-of-magnitude. Axions have a host of interesting astrophysical and cosmological effects, including, modifying the evolution of stars of all types (our sun, red giants, white dwarfs, and neutron stars), contributing significantly to the mass density of the Universe today, and producing detectable line radiation through the decays of relic axions. Consideration of these effects has probed 14 orders-of-magnitude in axion mass, and has left open only two windows for further exploration: 10^{-6} eV $\lesssim m_a \lesssim 10^{-3}$ eV and 1 eV $\lesssim m_a \lesssim$ 5 eV (hadronic axions only). Both these windows are accessible to experiment, and a variety of very interesting experiments, all of which involve "heavenly axions," are being planned or are underway. 58 refs., 6 figs., 1 tab.

Some preliminary results on the spectra of cumulative pions produced in He-nuclei interactions, at 4.5 AGeV/c, obtained using the SKM-200 spectrometer at IUCN-Dubna. (authors).

37520 (INIS-mf–11440, pp. 191-192) **New results on narrow dibaryns produced in np-ppPI$^-$ at 1.25 Gev/c.** Arakelian, S.G. (Joint Inst. for Nuclear Research, Dubna (USSR)); Yerusalimov, A.P.; Moroz, V.I.; Nikitin, A.V.; Pecenov, V.N.; Ravinovici, I.M.; Stelmakh, A.P.; Troyan, Y.A.; Besliu, C.; Cotorobai, F. Central Inst. of Physics, Bucharest (Romania). 1988. (In Romanian). (CONF-8810372–: Advances in physics, Constanta, Romania, 6-8 Oct 1988). In *Advances in Physics.* Order Number DE89012158/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

In the reaction np-ppπ^- at 1.25 GeV/c, using an enhanced experimental statistics new peaks in the two proton effective mass distribution were observed. (auhtors).

37521 (INIS-mf–11440, pp. 197-198) **On the possiility that (7q,q-bar) resonances decay into (6q) dibaryons.** Arakelian, S.G. (Joint Inst. for Nuclear Research, Dubna (USSR)); Yerusalimov, A.P.; Moroz, V.I.; Nikitin, A.V.; Pecenov, V.N.; Ravinovici, I.M.; Stelmakh, A.P.; Troyan, Y.A.; Besliu, C.; Cotorobai, F. Central Inst. of

Physics, Bucharest (Romania). 1988. (In Romanian). (CONF-8810372–: Advances in physics, Constanta, Romania, 6-8 Oct 1988). In *Advances in Physics*. Order Number DE89012158/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

The hypothesis that (7q,q-bar) non-strange resonances observed in the np interactions at 5.1 GeV/c could decay via dibaryonic (6q) resonances is discussed. (authors).

37522 (INIS-mf–11440, pp. 224-225) **Semiclassical approach to particle resonances and dibaryons.** Nichitiu, F. (Central Inst. of Physics, Bucharest (Romania). Inst. of Physics and Nuclear Engineering). Central Inst. of Physics, Bucharest (Romania). 1988. (In Romanian). (CONF-8810372–: Advances in physics, Constanta, Romania, 6-8 Oct 1988). In *Advances in Physics*. Order Number DE89012158/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

Using the semiclassical picture proposed by Arndt and Roper for Δ_{33} resonance, in this work we show that the other resonances as well as dibaryons can be described by this approach.

37523 (INIS-mf–11440, pp. 226-227) **Molecular picture for dibaryons.** Nichitiu, F. (Central Inst. of Physics, Bucharest (Romania). Inst. of Physics and Nuclear Engineering). Central Inst. of Physics, Bucharest (Romania). 1988. (In Romanian). (CONF-8810372–: Advances in physics, Constanta, Romania, 6-8 Oct 1988). In *Advances in Physics*. Order Number DE89012158/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

We try to suggest that the threshold effects and the rotational-like behaviour of the resonances masses seems to hide a common molecular picture for the low mass dibaryon resonances.

37524 (INS–732) **Super-hypernuclei in the quark-shell model.** Terazawa, Hidezumi. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Jan 1989. 27p. Order Number DE89790947/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A super-hypernucleus is a nucleus which consists of many strange quarks as well as up and down quarks. An important part of the results of our recent investigation on the mass spectrum and other properties of super-hypernuclei in the quark-shell model is reported. It is expected that not only certain exotic nuclei such as the 'dideltas' ($D\delta^{++++}$ and $D\delta^{----}$). but also certain super-hypernuclei such as the 'hexalambda' ($H\lambda$) and the 'vigintiquattuoralambda' ($Vq\lambda$) may appear as quasi-stable nuclei. However, in the quark-shell model, there is no qualitative reason why the 'dihyperon' or 'H dibaryon' (H) should be quasi-stable or even stable. Many other predictions including a sudden increase of the K/π ratio due to the production of super-hypernuclei in heavy-ion collisions at high energies are also made.

37525 (INS–737) **Compactification of space-time in SU(∞) Yang-Mills theory.** Shiraishi, Kiyoshi. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Feb 1989. 15p. Order Number DE89790949/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The compactification on torus in SU(∞) Yang-Mills (YM) theory is considered. A special form of configuration of gauge field on torus is examined. The vacuum energy and free energy in the presence of fermions coupled with this background in the theory are derived and possible symmetry breaking is investigated.

37526 (LA-UR–89-1918) **Precision electroweak physics with neutrinos at Los Alamos.** Sanders, G.H. Los Alamos National Lab., NM (USA). 1989. 8p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8903132–6: 24. Rencontres de Moriond: electroweak interactions and unified theories, Les Arcs, France, 5-12 Mar 1989). Order Number DE89014025/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We review the status of current efforts at Los Alamos to measure the mass of $\bar{\nu}_e$ with tritium beta decay and to search for oscillation of $\bar{\nu}_\mu$ to $\bar{\nu}_e$. A new proposal to carry out a precision measurement of the electroweak mixing angle, θ_W, using neutrino-electron scattering measured in a 7000-ton water Čerenkov detector, the Large Čerenkov Detector (LCD), is described. 17 refs., 6 figs., 1 tab.

37527 (LBL–27134) **Present and future searches for the Higgs Boson with the MEVVA high current metal ion source.** Cahn, R.N. Lawrence Berkeley Lab., CA (USA). May 1989. 6p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8904226–2: 12. international workshop on weak interactions and neutrinos, Ginosar, Israel, 9-14 Apr 1989). Order Number DE89013671/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper discusses the following topics: β decay to Higgs; upsilon decay; Z decay; e^+e^- above the Z; and very high energy hadron colliders. 26 refs., 4 figs. (LSP)

37528 (NBI-HE–89-17) **What is special about the group of the standard model?.** Nielsen, H.B.; Brene, N. Niels Bohr Inst., Copenhagen (Denmark). Mar 1989. 8p. Order Number DE89783574/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The standard model is based on the algebra of $U_1xSU_2xSU_3$. The systematics of charges of the fundamental fermions seems to suggest the importance of a particular group having this algebra, viz. $S(U_2xU_3)$. This group is distinguished from all other connected compact non semisimple groups with dimensionality up to 12 by a characteristic property: it is very 'skew'. By this we mean that the group has relatively few 'generalised outer automorphisms'. One may speculate about physical reasons for this fact.

37529 (NORDITA–89/8-P(prepr.)) **Couplings in the heterotic superconformal three generation model.** Greene, B.R.; Ross, G.G.; Luetken, C.A. Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark); Harvard Univ., Cambridge, MA (USA). Lyman Lab. of Physics; Oxford Univ. (UK). Dept. of Theoretical Physics. 1989. 35p. (HUTP–88/A062). Order Number DE89783575/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We compute all Yukawa couplings in the three generation string theory recently constructed by Gepner by tensoring solvable N=2 superconformal theories. The results are consistent with those obtained by a geometric analysis of the field theory limit where the model reduces to a compactification on an algebraic manifold of the Calabi-Yau type.

37530 (RRK–89-9) **Gauge invariant cosmological perturbations with cold dark matter.** Sugiyama, Naoshi. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Feb 1989. 33p. Order Number DE89790940/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

In the gauge-invariant formalism, the evolution of adiabatic and baryonic isocurvature density perturbations in a universe dominated by cold dark matter (CDM) is thoroughly investigated. We evaluate anisotropies in the cosmic microwave background (CMB) and large scale peculiar velocities. From the recent observations of CMB fluctuations, we find new and stringent constraint is obtained for adiabatic CDM models as $\Omega_0\ h^{-1} > 0.3$. As for baryonic isocurvature perturbations, though the constraint is required as $\Omega_0\ h^{-1} >$approx 0.6, we find these baryonic isocurvature models are more viable than axion isocurvature models. However it is difficult for both adiabatic and baryonic isocurvature CDM models to explain to observed large scale velocity field at >approx $50h^{-1}$ Mpc while being consistent with the observations of CMB anisotropies.

37531 (SLAC-PUB–4881) **The search for charged-lepton specific forces and the PEGASYS facility.** Perl, M.L. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Feb 1989. 13p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8901115–2: Topical conference on electronuclear physics with internal targets, Stanford, California, USA, 9-12 Jan 1989). Order Number DE89013747/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper discusses the electroproduction of lepton pairs as a method of searching for a charged-lepton specific force, and as a general method of searching for deviations from conventional quantum electrodynamics. The use of the PEGASYS facility for these purposes is briefly described. Search possibilities in other energy ranges are noted. 22 refs., 11 figs.

37532 (SLAC-PUB–4955) **Heavy quark physics.** Gilman, F.J. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Apr 1989. 48p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-881292–1: 3. Mexican school of particles

and fields, Cuernavaca, Mexico, 5-16 Dec 1989). Order Number DE89014589/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Various aspects of the physics of heavy quarks and of CP violation are reviewed. 76 refs., 19 figs.

37533 (SLAC-PUB–4973) **CP violation in K decays.** Gilman, F.J. Stanford Linear Accelerator Center, Menlo Park, CA (USA). May 1989. 29p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8902110–2: 2. international symposium on the 4th family of quarks and leptons, Santa Monica, California, USA, 23-25 Feb 1989). Order Number DE89014593/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Recent theoretical and experimental progress on the manifestation of CP violation in K decays, and toward understanding whether CP violation originates in a phase, or phases, in the weak mixing matrix of quarks is reviewed. 23 refs., 10 figs.

37534 (SLAC-PUB–4983) **Quark mass ratios in semi-leptonic quark decays.** Nir, Yosef. Stanford Linear Accelerator Center, Menlo Park, CA (USA). May 1989. 8p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8902110–1: 2. international symposium on the 4th family of quarks and leptons, Santa Monica, California, USA, 23-25 Feb 1989). Order Number DE89013751/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

An ambiguity in the calculation of CKM matrix elements from semi- leptonic decay rates is resolved: to every choice of scales for the quark masses in the phase-space factor and in the QCD-correction factor, there corresponds a specific QCD-correction factor. This factor is modified in such a way as to make the final result independent of the scales. Specific expressions are given for the case of on-shell quark masses and for the case where both masses are taken at a single common scale. A calculation of $|V_{cb}|$ and $|V_{ub}/V_{cb}|$ is carried out in view of these clarifications. 5 refs.

37535 (SLAC-PUB–4987) **What do we know (and how) about the CKM [Cabibbo-Kobayashi-Maskawa] matrix.** Nir, Y. Stanford Linear Accelerator Center, Menlo Park, CA (USA). May 1989. 9p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00515. (CONF-8904226–1: 12. international workshop on weak interactions and neutrinos, Ginosar, Israel, 9-14 Apr 1989). Order Number DE89014587/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The way from an experimental measurement to the numerical value for a CKM matrix element is described. How do we choose the appropriate model? What are the uncertainties involved? Where should we direct our future efforts? How do loop processes help us? Finally we describe the state of the art of our knowledge of the CKM matrix. 6 refs.

37536 Complete computation of high-p_T W and Z production in second-order QCD. Arnold, P.B. (Argonne National Lab., IL (USA). High Energy Physics Div.); Hall Reno, M. *Nuclear Physics [Section] B (Netherlands),* 319(1): 37-71 (5 Jun 1989).

We present a full computation of $d\sigma/dq_T^2$ for W, Z and virtual γ production to second order in QCD. This includes qg, gg, and singlet qanti q + qq collisions in addition to the usual non-singlet qanti q + qq. The primary motivation is the importance of quark-gluon collisions at Tevatron energies. Attention is restricted to high and moderate q_T, avoiding the resummation necessary at small transverse momentum. We give analytic results for all constituent cross-sections $d\sigma/dq_T^2$ dy and, for W and Z production, numerically convolute them with structure functions.

37537 Three-body unitarity, the cloudy bag model, and the Roper resonance. Pearce, B. C. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545(US)); Afnan, I. R. *Physical Review [Section] C: Nuclear Physics (USA),* 40(1): 220-236 (Jul 1989).

We present the details and results of a Faddeev calculation of πNscattering in the P_{11} channel in the region of the Roperresonance. Our equations respect two- and three-body unitarity, treat thenucleon and delta on an equal footing, and have a pole with correct residue atthe nucleon mass. The input is from the cloudy bag model. Resonance behavior isexhibited without the inclusion of a bare Roper bag, although not in detailedagreement with experiment. If a bare Roper bag is included, the phase shiftsvary far too rapidly in the resonance region, implying that identifying thelowest radial bag excitations with the Roper leads to a physical Roper that ismuch too narrow.

37538 B->$X_s e^+e^-$ in the six-quark model. Grinstein, B. (Lawrence Berkeley Lab., CA (USA)); Savage, M.J.; Wise, M.B. *Nuclear Physics [Section] B (Netherlands),* 319(2): 271-290 (12 Jun 1989). DOE Contract AC03-76SF00098;AC03-81ER40050;FG03-84ER40172.

We compute the inclusive rate for a B-meson to decay to strange hadronic final states and a large mass electron-positron pair: B->$X_s e^+e^-$. The dependence of the rate on the invariant mass of the e^+e^- pair is examined. The computation is done in the standard six-quark model with a minimal Higgs sector and in extensions of the standard model with two Higgs doublets. For e^+e^- pairs with very large invariant mass the strange hadronic final states X_s must have low mass. In this kinematic region we estimate the rate for B->Ke^+e^- using the nonrelativistic quark model.

37539 Two-scale technicolor. Lane, K. (Boston Univ., MA (USA). Dept. of Physics); Eichten, E. *Physics Letters [Section] B (Netherlands),* 222(2): 274-280 (18 May 1989). DOE Contract AC02-86ER40284.

Walking technicolor theories naturally have fermions belonging to different technicolor representations and, therefore, at least two distinct energy scales below 1 TeV. We study a simplified two-scale version without ordinary color. We show that masses of light-scale technipions and technirhos are such that the latter tend always to decay to at least one $W^{\pm}$ or Z^0. This signature should be observable at the Tevatron collider for technirho masses up to 300 GeV.

37540 Multiplicity fluctuations in finite rapidity windows. intermittency or quantum statistical correlation?. Carruthers, P. (Arizona Univ., Tucson (USA). Dept. of Physics); Friedlander, E.M.; Shih, C.C.; Weiner, R.M. *Physics Letters [Section] B (Netherlands),* 222(3/4): 487-492 (25 May 1989). DOE Contract AC03-76SF00098.

It is shown that the experimentally observed dependence of moments of multiplicity distributions on the width of the rapidity window can be interpreted by simple quantum statistical properties of the emitting system(s) and does not necessarily imply evidence for intermittency.

37541 Ground state of high-density matter. Copeland, E. (Fermi National Accelerator Lab., Batavia, IL (USA). NASA/Fermilab Astrophysics Center); Kolb, E.W.; Lee, K. *Nuclear Physics [Section] B (Netherlands),* 319(3): 501-510 (19 Jun 1989).

It is shown that if an upper bound to the false vacuum energy of the electroweak Higgs potential is satisfied, the true ground state of high-density matter is not nuclear matter, or even strange-quark matter, but rather a non-topological soliton where the electroweak symmetry is exact and the fermions are massless. We examine this possibility in the standard $SU(3)_C$ x $SU(2)_L$ x $U(1)_Y$ model. The bound to the false vacuum energy is satisfied only for a narrow range of the Higgs boson masses in the minimal electroweak model (within a few eV of its minimum allowed value of 6.6 GeV), and a somewhat wider range for electroweak models with a non-minimal Higgs sector.

37542 Enhanced CP violations in hadronic charm decays. Golden, M. (Fermi National Accelerator Lab., Batavia, IL (USA)); Grinstein, B. *Physics Letters [Section] B (Netherlands),* 222(3/4): 501-506 (25 May 1989).

The observation of CP violation in the decay of D mesons will not necessarily be a signal of new physics. If certain strong interaction matrix elements are enhanced, in analogy to the $\Delta I=1/2$ rule of K decays, then CP violation will be observable in strangeness conserving decays.

6453 Particle Invariance Principles and Symmetries

37543 (LAL–88-29) **Tests of QCD in photoproduction.** Wormser, G.; The NA 14 Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Jun 1988. 9p. (CONF-8803214–: Lake Louise Winter Institute meeting, Alberta, CA, USA,

6-12 Mar 1988). Order Number DE89776424/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The quantitative tests of perturbative QCD performed in high p_T photoproduction by the NA14 experiment are reviewed. Preliminary results are reported on charm photoproduction, where both perturbative and non-perturbative aspects of QCD can be tested, using the high quality data provided by a Silicon microvertex detector.

37544 (LAL–88-36) **First evidence for direct cp violation.** Schaffer, A.C.; CERN-Dortmund-Edinburgh-Mainz-Orsay-Pisa-Siegen Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Jun 1988. 10p. (CONF-8803109–:). Order Number DE89776418/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The double ratio R of the relative decay rates of the short-and long-lived neutral kaons into two charged and two neutral pions was measured to be $0.980 \pm 0.004 \pm 0.005$. The deviation of R from unity implies CP violation in the transition of the CP-odd K_2 into two pions with $\epsilon'/\epsilon = (3.3 \pm 1.1) \times 10^{-3}$.

37545 (ANL-HEP-CP–89-36) **New infinite-dimensional algebras, sine brackets, and SU (∞).** Zachos, C.K.; Fairlie, D.B. Argonne National Lab., IL (USA). High Energy Physics Div. 1989. 9p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-8903130–1: Strings '89 conference, College Station, TX, USA, 13-18 Mar 1989). Order Number DE89013178/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We investigate the infinite dimensional algebras we have previously introduced, which involve trigonometric functions in their structure constants. We find a realization for them which provides a basis-independent formulation, identified with the algebra of sine brackets. A special family of them, the cyclotomic ones, contain SU(N) as invariant subalgebras. In this basis, it is evident by inspection that the algebra of SU(∞) is equivalent to the centerless algebra of $SDiff_0$ on two-dimensional manifolds. Gauge theories of SU(∞) are thus simply reformulated in terms of surface (sheet) coordinates. Spacetime-independent configurations of their gauge fields describe strings through the quadratic Schild action. 11 refs.

37546 (BONN-HE–89-1) **On the construction of certain instanton bundles over flat tori.** Schenk, H. Bonn Univ. (Germany, F.R.). Physikalisches Inst. Mar 1989. 26p. Available from Bonn Univ. (Germany, F.R.). Physikalisches Inst.

It is well known that the anti-self-dual solutions to the Yang-Mills equations over Kaehler manifolds correspond to certain stable holomorphic vector bundles called instanton bundles. In this paper we explicitly construct several instanton bundles over flat tori. In particular it is possible to obtain all su(2) instantons with Euler characteristic -2 or -3 by our constructions.

37547 (CRN-HE–85-06) **Direct photon and π^0 production by deep inelastic scattering of real photons inclusive and exclusive studies.** Bloch, D. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires; Strasbourg-1 Univ., 67 (France). 1985. 193p. (In French). Order Number DE89789234/JAW. Available from NTIS (US Sales Only), PC A09/MF A01.

The NA14 photoproduction experiment at CERN has investigated the deep inelastic scattering of real photons, with energy between 50 and 150 GeV, in order to reveal the point-like photon-quark interaction. QED Compton scattering $\gamma q \rightarrow \gamma q$ QCD Compton scattering $\gamma q \rightarrow gq$. Results: - evidence for the QCD Compton scattering and test of the validity of perturbative quantum chromodynamics up to the order of ($\alpha\ \alpha_s^2$) (inclusive measurement of the photoproduction cross-section of π^0, with P_T between 1.5 and 4 GeV/c). - Confirmation of the two jets production as predicted by QCD Compton scattering (study of the final state). - Evidence for the QED Compton scattering, including QCD corrections (inclusive observation of a clear prompt photon signal of $P_T > 2.5$ GeV/c, cross-section measurement and exclusive analysis). - Confirmation of the fractional nature of the quark electric charge. Clear disagreement with gauge integer charge quark models (photoproduction of prompt photons).

37548 (FNAL/C–89/116-T) **Macroscopic constraints on string unification.** Taylor, T.R. Fermi National Accelerator Lab., Batavia, IL (USA). Mar 1989. 8p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-8903132–4: 24. Rencontres de Moriond: electroweak interactions and unified theories, Les Arcs, France, 5-12 Mar 1989). Order Number DE89014814/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The comparison of sting theory with experiment requires a huge extrapolation from the microscopic distances, of order of the Planck length, up to the macroscopic laboratory distances. The quantum effects give rise to large corrections to the macroscopic predictions of sting unification. I discus the model-independent constraints on the gravitational sector of string theory due to the inevitable existence of universal Fradkin-Tseytlin dilatons. 9 refs.

37549 (FNAL/C–89/125-T) **Machines for lattice gauge theory.** Mackenzie, P.B. Fermi National Accelerator Lab., Batavia, IL (USA). May 1989. 15p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-890415–5: Computing in high energy physics, Oxford, UK, 10-14 Apr 1989). Order Number DE89014815/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The most promising approach to the solution of the theory of strong interactions is large scale numerical simulation using the techniques of lattice gauge theory. At the present time, computing requirements for convincing calculations of the properties of hadrons exceed the capabilities of even the most powerful commercial supercomputers. This has led to the development of massively parallel computers dedicated to lattice gauge theory. This talk will discuss the computing requirements behind these machines, and general features of the components and architectures of the half dozen major projects now in existence. 20 refs., 1 fig.

37550 (INIS-mf–11440, pp. 209-210) **Contribution of the kink-kink interaction to the free energy of a complex scalar nonlinear field.** Grecu, D. (Central Inst. of Physics, Bucharest (Romania). Inst. of Physics and Nuclear Engineering); Visinescu, A. Central Inst. of Physics, Bucharest (Romania). 1988. (In Romanian). (CONF-8810372–: Advances in physics, Constanta, Romania, 6-8 Oct 1988). In *Advances in Physics*. Order Number DE89012158/JAW. Available from NTIS (US Sales Only), PC A99/MF A01 - OSTI; INIS.

The contribution of the kink-kink interaraction to the free energy of an 1-D nonlinear scalar complex field is obtained in the continuum limit at low temperatures. (authors).

37551 (INS–734) **Charge screening in gauge theories at finite temperature and density.** Yamada, Hirofumi. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. 4 Feb 1989. 12p. Order Number DE89790948/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We investigate the charge screening in massless QED at finite temperature and density by the use of the renormalization group method. We find that the Debye screening occurs when the temperature and chemical potential are sufficiently smaller than the typical scale of the model. We also find that the Debye mass involves the logarithmic factor which is dependent on the temperature and chemical potential. Charge screening in QCD at finite temperature and density is also investigated and is found to behave unexpectedly.

37552 (JINR-R–5-88-138) **Classification of integrable two-dimensional models of relativistic field theory by means of computer.** Getmanov, B.S.; Kovtun, V.E. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation. 1988. 6p. (In Russian). Order Number DE89618470/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The results of classification of two-dimensional relativistic field models (1) spinor; (2) essentially-nonlinear scalar possessing higher conservation laws using the system of symbolic computer calculations are presented shortly. 13 refs.

37553 (LAL–88-30) **Three and five photon decays of the J/PSI (3097).** Couchot, F.; DM2 Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Jun 1988. 4p.

(CONF-8803109–: 23. Rencontre de Moriond conference: electroweak interactions and unified theories, Les Arcs, France, 6-12 Mar 1988). Order Number DE89776423/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The all-neutral decays of the J/PSI (3097) have been studied using the statistics of 8.6 million J/PSI decays collected with the DM2 detector at the DCI e^+e^- storage rings. The three photon final states give access to precise measurements of BR (J/PSI -> $\gamma \pi^0$) and of the eta mass, and to indirect determinations of the eta'and eta_c branching ratios to two photons. The study of the five photon final states which proceed through $\gamma \pi^0 \pi^0$ or γ eta eta confirms the Crystal ball results on the f_2 (1720).

37554 (LAL–88-37) **Charm photoproduction mechanisms and a few preliminary results from the NA 14' experiment.** Roudeau, P.; N 14 Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Jun 1988. 8p. (CONF-8803109–:). Order Number DE89776422/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

A low value for the charm quark mass of 1.2 or 1.3 GeV is ruled out by data on charm photoproduction. Absolute D_s branching ratios will be extracted in the future from these experiments with a systematic uncertainty below 30 %. Possible D^{**} signals are presented.

37555 (NORDITA–89/11-P(prepr.)) **Non renormalization theorem in bosonized n-string formalism.** Nykaenen, E. Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark). 1989. 20p. Order Number DE89783576/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

We examine the non renormalization theorem in one and two loops using the bosonized N-string formalism.

37556 (RRK–88-41) **Relations between Virasoro algebra and Krichever-Novikov algebra on a torus.** Kubo, Reijiro; Ojima, Shuichi; Paul, S.K. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Dec 1988. 10p. Order Number DE89790891/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

Relations between Virasoro algebra and Krichever-Novikov (KN) algebra are investigated on a torus. Generators of the KN algebra are shown to be expressed by linear combinations of those of the Virasoro algebra. We also study the current algebra, which allows us to define the Krichever-Novikov-Kac-Moody (KNKM) algebra on the torus.

37557 (RRK–89-5) **Perturbation of c=1 conformal field theory and quantum sine-Gordon theory.** Yoshii, Hisahiro. Hiroshima Univ., Takehara (Japan). Research Inst. for Theoretical Physics. Jan 1989. 10p. Order Number DE89790894/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

We study the relevant perturbation of gaussian c = 1 conformal field theories. The unitary minimal conformal models are derived from c = 1 rational gaussian models compactified on the circle and the Z_2 orbifold with a suitable radius. There is one-to-one correspondence between the compactification radius and the minimal model. We also discuss the connection of the conformal theory with quantum sine-Gordon theory.

37558 **Stable static solitons in the nonlinear sigma model with a topological term.** Voruganti, P. (Stanford Linear Accelerator Center, CA (USA)). *Physics Letters [Section] B (Netherlands)*, 223(2): 181-186 (8 Jun 1989). DOE Contract AC03-76SF00515.

Soliton solutions in the nonlinear sigma model in (2+1) space-time dimensions are analyzed classically in the presence of the Chern-Simons term using a CP^1 map. Making an expansion in θ_{CP}, the new contributions to the energy functional push the solitons to infinite size. It is further shown that including quantum zero-point fluctuations around the soliton vacuum in the long-wavelength limit is insufficient to stabilize its size.

37559 **Using reparametrization invariance to define vacuum infinities in string path integrals.** Callan, C.G. (Stanford Linear Accelerator Center, CA (USA)); Thorlacius, L. *Nuclear Physics [Section] B (Netherlands)*, 319(1): 133-154 (5 Jun 1989). DOE Contract AC03-76SF00515.

Path integrals for interacting world sheet sigma models play a key role in string theory. For open strings, the relevant path integral is one-dimensional and has direct physical interpretation as a source term for closed string fields. This means that the vacuum divergences (Moebius infinities) of the path integral must be renormalized correctly. In this paper we show that reparametrization invariance Ward identities, apart from specifying the equations of motion of space-time background gauge fields, also serve to fix the renormalization scheme of the vacuum divergences.

37560 (ANL/NDM–111) **Fifty years of nuclear fission: Nuclear data and measurements series.** Lynn, J.E. Argonne National Lab., IL (USA). Jun 1989. 22p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE89014084/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This report is the written version of a colloquium first presented at Argonne National Laboratory in January 1989. The paper begins with an historical preamble about the events leading to the discovery of nuclear fission. This leads naturally to an account of early results and understanding of the fission phenomena. Some of the key concepts in the development of fission theory are then discussed. The main theme of this discussion is the topography of the fission barrier, in which the interplay of the liquid-drop model and nucleon shell effects lead to a wide range of fascinating phenomena encompassing metastable isomers, intermediate-structure effects in fission cross-sections, and large changes in fission product properties. It is shown how study of these changing effects and theoretical calculations of the potential energy of the deformed nucleus have led to broad qualitative understanding of the nature of the fission process. 54 refs., 35 figs.

37561 (CNEA-NT–3/88) **Nuclear physics workshop.** Comision Nacional de Energia Atomica, Buenos Aires (Argentina). 1988. 291p. (In Spanish, English, Portugue (CONF-8706396–: 10. nuclear physics workshop, Buenos Aires, Argentina, 23-26 Jun 1987). Order Number DE89620459/JAW. Available from NTIS (US Sales Only), PC A13/MF A01 - OSTI; INIS.

This Workshop in Nuclear Physics related to the TANDAR, took place in Buenos Aires in April from 23 to 26, 1987, with attendance of foreign scientists. There were presented four seminars and a lot of studies which deal with the following fields: Nuclear Physics at medium energies, Nuclear Structure, Nuclear Reactions, Nuclear Matter, Instrumentation and Methodology for Nuclear Spectroscopy, Classical Physics, Quantum Mechanics and Field Theory. It must be emphasized that the Electrostatic Accelerator TANDAR allows to work with heavy ions of high energy, that opens a new field of work in PIXE (particle induced X-ray emission). This powerful analytic technique makes it possiblethe analysis of nearly all the elements of the periodic table with the same accuracy. (M.E.L.).

37562 (CONF-8903132–3) **Transverse energy scaling and energy density estimates from ^{16}O- and ^{32}S-induced reactions.** Awes, T.C.; Albrecht, R.; Baktash, C.; Beckmann, P.; Berger, F.; Bock, R.; Claesson, G.; Clewing, G.; Dragon, L.; Eklund, A. WA80 Collaboration. Oak Ridge National Lab., TN (USA). 1989. 6p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 24. Rencontres de Moriond: electroweak interactions and unified theories; Les Arcs, France; 5-12 Mar 1989. Order Number DE89013007/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We discuss the dependence of transverse energy production on projectile mass, target mass, and on the impact parameter of the heavy ion reaction. The transverse energy is shown to scale with the number of participating nucleons. Various methods to estimate the attained energy density from the observed transverse energy are discussed. It is shown that the systematics of the energy density estimates suggest average of 2-3 GeV/fm^3 rather than the

much higher values attained by assuming Landau-stopping initial conditions. Based on the observed scaling of the transverse energy, an initial energy density profile may be estimated. 11 refs., 4 figs.

37563 (DOE/ER/40002–T1) **Research in nuclear physics at low and intermediate energies, neutrinos and x rays: Final report, May 1980–August 1987.** California Inst. of Tech., Pasadena, CA (USA). 1987. 161p. Sponsored by DOE Energy Research. DOE Contract AS03-81ER40002. Order Number DE89012698/JAW. Available from NTIS, PC A08/MF A01 - OSTI; GPO Dep.

During the past year the research in our West Bridge Laboratory at Caltech has continued to focus on studies of neutrino properties, particularly neutrino mass. To this end the nuclear double beta decay has been exploited and several experiments have been carried out. Upon completion of a series of comprehensive studies of backgrounds and radioactive impurities in various materials conducted with a 90 cm^2 Ge detector in our Gotthard tunnel laboratory, a large 8 crystal Ge detector array with its cryostat, copper and lead shielding, and data acquisition computer has been installed in the Gotthard tunnel and is now operating well with the anticipated low background. Sensitive limits for two-neutrino and neutrinoless decay, as well as for majoron emission have already been obtained. The latter results rule out a recently published claim. The design and construction of the xenon time projection chamber has been completed. The TPC now operated with an active volume of 206 liters of xenon gas 5 atm. At the present time electron and muon tracks are being recorded and analyzed using a computer based pattern recognition scheme. A double beta decay event is recognized by a contiguous track beginning and ending with a high ionization density "blob". At the same time, theoretical nuclear structure calculations have been conducted to help evaluate the rates of the two-neutrino and neutrinoless processes in various double beta decay candidates, including the nuclei ^{76}Ge and ^{136}Xe. To further explore new techniques capable of identifying double beta decay in high density targets, extensive studies of electron-ion pair recombination in liquid argon and liquid xenon have been conducted, leading to several novel concepts for the creation of the electron track and the observed energy resolution.

37564 (DOE/ER/40004–T2) **Medium energy meson physics: [Progress report, 1981–1983].** Crowe, K.M. California Univ., Berkeley, CA (USA). Dept. of Physics. 1 Aug 1983. 13p. Sponsored by DOE Energy Research. DOE Contract AS03-81ER40004. Order Number DE89014557/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper discusses with gamma ray pair spectrometer measurements of radiative pion capture reactions, weak interaction using muon decay parameters and properties of muonium.

37565 (DOE/ER/40004–T4) **Medium energy meson physics: Progress report, January 1, 1986 through December 31, 1986.** Crowe, K.M. California Univ., Berkeley, CA (USA). Dept. of Physics. 1986. 19p. Sponsored by DOE Energy Research. DOE Contract AS03-81ER40004. Order Number DE89014562/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper discusses pion bremsstrahlung radiation reactions; eta resonances; π^+/π^- elastic scattering on ^3He and ^4He; muon catalyzed fusion; and μSR. (LSP)

37566 (DOE/ER/40150–73) **CEBAF/SURA [Continuous Electron Beam Accelerator Facility]/[Southeastern Universities Research Association] 1988 summer workshop: Proceedings.** Gross, F.; Lightbody, J. (eds.). Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility. Jan 1989. 396p. Sponsored by DOE Energy Research. DOE Contract AC05-84ER40150. (CONF-880688–: Summer workshop of the continuous electron beam accelerator facility, Newport News, VA, USA, 20-24 Jun 1988). Order Number DE89014427/JAW. Available from NTIS, PC A17/MF A01 - OSTI; GPO Dep.

This report contains papers from a summer workshop of the continuous electron beam accelerator facility. Some topics of these papers are: spectrometers; electron scattering from deuterons; relativistic correlations in nuclear matter; pion production on ^3He and ^3H; quantum electrodynamic processes in crystals; $^{12}C(e,e'p)$ x reaction; deuteron polarization tensor and relativistic spin rotation; electromagnetic excitation of nuclei; electron distortion and structure functions in (e,e'p) reactions; and reaction mechanism of $^4He(e,e'p)^3H$. (LSP)

37567 (DOE/ER/40150–75) **CEBAF/SURA [Continuous Electron Beam Accelerator Facility]/[Southeastern Universities Research Association] 1987 summer workshop: Proceedings.** Gross, F.; Williamson, C. (eds.). Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility. Oct 1987. 483p. Sponsored by DOE Energy Research. DOE Contract AC05-84ER40150. (CONF-8706200–: CEBAF summer workshop, Newport News, VA, USA, 22-26 Jun 1987). Order Number DE89014430/JAW. Available from NTIS, PC A21/MF A01 - OSTI; GPO Dep.

This report contains papers from the CEBAF accelerator facility summer workshop. Some topics covered are: baryon-baryon interactions, deuteron form factors; neutron detection; high resolution spectrometers; nuclear strangeness; parity violation; photon-deuteron interactions; chemical reactions in ion sources; quantum chromodynamics; hypernuclear magnetic moments; and photoproduction of π^+ from ^{14}N. (LSP)

37568 (DOE/ER/40150–78) **HUGS at CEBAF [Hampton University Graduate Studies at the Continuous Electron Beam Accelerator Facility] June 6–24, 1988: Proceedings.** Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility. 1988. 222p. Sponsored by DOE Energy Research. DOE Contract AC05-84ER40150. (CONF-8806381–: 3. annual Hampton University Graduate Studies (HUGS) summer school, Newport News, VA, USA, 6-24 Jun 1988). Order Number DE89014426/JAW. Available from NTIS, PC A10/MF A01 - OSTI; GPO Dep.

Topics discussed in this paper are: Physics thru the last 80 years; low energy neutron physics at LAMPF; experiments on P-violation; nucleon structure structure and nucleon resonances; electro-excitation of nucleon resonances; electron scattering (e,e'p) experiments; quasielastic scattering of electron with nucleus (introduction to (e,e'P) experiment); CEBAF's machine; quantum hadrodynamics-QHD-1 the Walecka model; relativistic nuclear dynamics; hybrid models and QCD; and modeling confinement: poor man's version.

37569 (DOE/ER/40150–81) **CEBAF/SURA 1986 summer workshop: Proceedings.** Gross, F.; Minehart, R. (eds.). Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility. Nov 1986. 706p. Sponsored by DOE Energy Research. DOE Contract AC05-84ER40150. (CONF-8606241–: 3. Continuous Electron Beam Accelerator Facility summer school, Newport News, VA, USA, 23-27 Jun 1986). Order Number DE89014423/JAW. Available from NTIS, PC A99/MF A01 - OSTI; GPO Dep.

The organization of this volume parallels the program of the 1986 Workshop; it consists of summary talks on the status of CEBAF, invited talks on theoretical and experimental subjects related to the CEBAF program, and working group meetings. The summary talks published here have been revised to include developments subsequent to the Workshop. Some topics discussed by the invited talks are: from the standard model to superstrings; quark models of nucleons and nuclei; multiparticle final states from pion-induced reactions; proton electromagnetic form factors; excited baryons; generating the bag with glueballs; deuteron polarimeters at intermediate energies; nuclear effect in deep-inelastic lepton-nucleus scattering; and delta electron- and photo-production in nuclei.

37570 (DOE/ER/40323–T1) **[Medium energy meson research]: [Progress report].** Crowe, K.M. California Univ., Berkeley, CA (USA). Dept. of Physics. [1989]. 24p. Sponsored by DOE Energy Research. DOE Contract FG03-87ER40323. Order Number DE89014123/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

In this section, we will provide an overview of the research program of this group. The major activity in 1988 has been in connection with the Crystal Barrel experiment, PS No. 197, at CERN, using the LEAR facility. We will review the motivation of the experiment, the overall progress of the construction of the apparatus and

the current schedule. In a separate section, we will present a detailed account of the Berkeley contribution, the central Jet Drift Chamber (JDC), the prototype study and the results of our progress to date. We will present a short section in which the other research programs which are being completed will be summarized, together with the accomplishments for 1988. Finally, we will discuss the program for 1989 as we bring together all the Crystal Barrel apparatus at LEAR to begin the experimental program.

37571 (LAL–87-10) **Radiative decay of J/psi into $\gamma\pi^+\pi^-$.** Augustin, J.E.; Cosme, G.; Couchot, F. and others; DM2 Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Apr 1987. 16p. Order Number DE89789228/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The radiative decay J/psi -> $\gamma\pi^+\pi^-$ has been studied using the 8.6 million J/psi produced in the DM2 experiment at the DCI e^+e^- storage rings at Orsay. The $\pi^+\pi^-$ mass spectrum shows a clean $f_2(1270)$ signal, and the possible presence of two other states at the $f_2(1720)$ and $f_4(2030)$ masses. For the $f_2(1270)$, the branching ratio BR(J/psi -> γf) x BF(f -> $\pi^+\pi^-$) is measured to be (7.50 $\pm$ 0.30 $\pm$ 1.12) x 10^{-4}, and the spin analysis prefers the J=2 assignment, with helicity parameters x = 0.83 $\pm$ 0.06 and y = 0.01 $\pm$ 0.06. The existence of higher mass states is discussed.

6511 Experimental Techniques

37572 (CONF-8901115–3) **Development of a polarized deuterium target to measure T_{20} in electron storage rings.** Young, L.; Coulter, K.; Gilman, R.A.; Holt, R.J.; Kinney, E.R.; Kowalczyk, R.S.; Napolitano, J.; Potterveld, D.; Lasarenko, B.A.; Mishnev, S.I. Argonne National Lab., IL (USA). 1989. 7p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. From Topical conference on electronuclear physics with internal targets; Stanford, California, USA; 9-12 Jan 1989. Order Number DE89014632/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The development of a polarized deuterium target to measure the analyzing power in electron scattering from the deuteron at the highest possible momentum transfer is described. Two areas of research have been simultaneously pursued: the development of a storage cell for polarized atoms (ANL and INP) and the development of a high-flux laser-driven source of polarized deuterium (ANL). The successful combination of these two technological developments will produce a polarized target having a figure of merit of $np_{zz}^2 \approx np_z^2 \approx 10^{14}$ cm^{-2}. The progress to date, including, feasibility tests of the storage cell concept, design of a high-density storage cell ad the development of the laser-driven source will be described. 14 refs., 7 figs.

37573 (IPNO-DRE–88-24) **Interaction of 20-100 MeV/u heavy ions with cold matter.** Herault, J.; Bimbot, R.; Gauvin, H.; Anne, R.; Bastin, G.; Hubert, F. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 10p. (CONF-8806104–: International workshop on atomic physics for ion driven fusion, Orsay, France, 20-24 Jun 1988). Order Number DE89789265/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The stopping powers of 12 solids and 10 gases and the associated energy loss straggling have been measured at GANIL for $^{16O-17}O$, ^{40}Ar, ^{40}Ca, ^{84}Kr-^{86}Kr, ^{100}Mo and ^{129}Xe-^{132}Xe ions in the energy domain 24 to 95 MeV/u. After a brief description of the experimental method, the set of data are presented and discussed. As far as stopping powers are concerned, a scaling law in Z_p^2 relative to the ^4He stopping powers at the same velocity becomes applicable when the projectile tends to be fully stripped. At the same time, the solid-gas effect, observed at low energy, vanishes. The energy loss straggling is compared to that deduced from Bohr model and some of its refinements. The theoretical value appears to be too small, by a factor 2, when the projectile is fully stripped. For partially stripped ions, the charge exchange straggling might explain the experimental observation.

37574 (IPNO-DRE–88-37) **Production of 400 MeV/u radioactive ion beams for therapy purposes.** Bimbot, R. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 24p. (CONF-8811152–: EULIMA workshop on the potential value of light ion beam therapy, Nice, France, 3-5 Nov 1988). Order Number DE89781599/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The production of radioactive beams from 400 MeV/u light ions (^{12}C-^{20}Ne) fragmentation is studied. The characteristics of these beams (energy, energy width, angular width) are calculated from the nuclear reaction kinematics, and from the modifications induced by ion-target interaction. The method used to select and purify such beams is given, and the main characteristics of the beam line (spectrometer) to be used are defined. Finally the production rates are derived from the available fragmentation cross sections.

37575 (LAL–87-35) **Measurement of the decays K_L -> 2γ and K_S -> 2γ.** Lutz, A.M. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. May 1987. 11p. (CONF-8703319–: Moriond meeting on progress in electroweak interactions, Les Arcs, France, 8 Mar 1987). Order Number DE89789227/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Using the Na31 set-up at the CERN SPS we have measured the decays K_L -> 2γ and K_S -> 2γ. The results are $\Gamma(K_L \to 2\gamma)/\Gamma(K_L \to 2\pi^0)$ = 0.632 $\pm$ 0.004 $\pm$ 0.008 and $\Gamma(K_S \to 2\gamma)/\Gamma(K_L \to 2\gamma)$ = 2.3 $\pm$ 1.0 $\pm$ 0.4. This is the first observation of K_S -> 2γ decays.

37576 (CRN-PN–8811) **Origin of the ^{13}C + ^{17}O resonant structure.** Freeman, R.M.; Basrak, Z.; Haas, F.; Hachem, A.; Monnehan, G.A.; Morsad, A.; Youlal, M. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires; Strasbourg-1 Univ., 67 (France). 1988. 7p. Order Number DE89789272/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

Using particle techniques we have been unable to reproduce the resonant structure in the inelastic channel of the ^{13}C + ^{17}O reaction. The structure previously observed in the γ-ray yields for the 0.871-MeV transition is now believed to be due to a hydrogen contamination.

37577 (FRCEA-TH–158) **Measure of back angle cross sections of antiproton-nucleus elastic scattering at 48 and 180 MeV.** Berrada, M. Grenoble-1 Univ., 38 (France); CEA Centre d'Etudes Nucleaires de Grenoble, 38 (France). Dept. de Recherche Fondamentale. Apr 1986. 129p. (In French). Order Number DE89789210/JAW. Available from NTIS (US Sales Only), PC A07/MF A01.

Antiproton-nucleus elastic scattering was studied in the LEAR ring at CERN. The scattering cross section at back angles (θ LAB = 142 to 164 deg inclusive) was measured using plastic scintillation detectors. Analysis of experimental data at 47 MeV for a CH target and at 182 MeV for CH, C12, 016, and 018 targets produces differential cross sections for back angles less than or equal to a few dozen microbarns. These results agree with theoretical microscopic predictions. The analysis improves understanding of antiproton-nucleus interaction and introduces a constraint on the construction of optical potentials. The antiproton-nucleus potential is shown to be highly absorbing, thereby excluding S type potentials, and removing the ambiguity arising from the analysis of antiprotonic atoms. The results also show that there is no attractive pocket in the real potential likely to lead to an increase of the back angle cross sections.

37578 (IPNO-DRE–88-05) **Fusion-fission of heavy systems: influence of the entrance channel mass asymmetry.** Rivet, M.F.; Alami, R.; Borderie, B.; Fuchs, H.; Gardes, D.; Gauvin, H. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Feb 1988. 26p. Order Number DE89781491/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The influence of the entrance channel on fission processes was studied by forming the same composite system by two different target-projectile combinations (^{40}Ar + ^{209}Bi and ^{56}Fe + ^{187}Re,

respectively). Compound nucleus fission and quasi fission were observed and the analysis was performed in the framework of the extra-extra-push model, which provides a qualitative interpretation of the results; limits for the extra-extra-push threshold are given, but problems with quantitative predictions for the extra-push are noted.

37579 **^{7}Li(p,n)^{7}Be and ^{12}C(p,n)^{12}N reactions at 200, 300, and 400 MeV.** Watson, J. W. (Department of Physics, Kent State University, Kent, Ohio 44242 TRIUMF, Vancouver, British Columbia, Canada V6T 2A3 Department of Physics, University of Western Ontario, London, Ontario, Canada N6A 3K7 Department of Physics, Simon Fraser Univ *Physical Review [Section] C: Nuclear Physics (USA)*, 40(1): 22-26 (Jul 1989).

At 200, 300, and 400 MeV bombarding energies, we measured cross sectionangular distributions for the^{7}Li(p,n)^{7}Be(g.s.+0.43 MeV)reaction and 0° cross sections for the^{12}C(p,n)^{12}N(g.s.) reaction. Systematicsof these reactions are presented. The center-of-mass cross section for the^{7}Li(p,n)^{7}Be(g.s.+0.43 MeV)reaction, when plotted as a function of momentum transfer, is nearlyindependent of energy. The laboratory cross section for this reaction at 0°in the energy range from 60 to 400 MeV is also independent of energy, having aconstant value, to within experimental errors, of 35.5 mb/sr with an estimateduncertainty of ±1.5 mb/sr.

37580 (CRN-PN–8620) **Transition between phenomena governed by the mean field and those governed by nucleon-nucleon collisions in the reaction ^{40} Ar + ^{68} Zn.** Fahli, A. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1986. 112p. (In French). Order Number DE89776429/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

Collisions between a Zn target and Ar of 14.6, 19.6, 27.6 and 35 MeV/nucleon incident energy cover part of the transition region between reaction mechanisms dominated by the mean field observed at low energy and those resulting from nucleon-nucleon interaction at high energy. Peripheral collisions in this reaction have been studied. Experimental energy spectra for ejectiles having nearly the projectile mass, have been reproduced using diffractional model calculations. The competition between fragmentation and transfer processes in the production of projectile-like fragments shows the persistance of collective effects. The heavy fragments emitted in central collisions have also been investigated. Fusion-evaporation and fusion-fission cross sections have been measured. Incomplete fusion is present at all the incident energies and becomes increasingly preponderant over complete fusion with increasing projectile energy. From comparison with other results, the momentum transfer appears to depend on the asymmetry of the system and on the projectile mass. Fusion disappears slightly above 35 MeV/nucleon which corresponds to a compound nucleus temperature of about 7 MeV. The characteristics of the charged light particles emitted in the reaction have been studied, and analyzed with several models: moving source, preequilibrium emission and coalescence model.

6515 Nuclear Properties and Reactions, A=39-58, Experimental

37581 (ISN–87-87) **Decay of new mass-separated neutron-deficient La and Ce isotopes.** Genevey, J.; Gizon, A.; Idrissi, N.; Weiss, B.; Beraud, R.; Charvet, A.; Duffait, R.; Emsallem, A.; Meyer, M.; Ollivier, T. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. 1987. 6p. (CONF-8709440–: 5. International conference on nuclei far from stability, Rosseau Lake, CA, USA, 14-19 Sep 1987). Order Number DE89781514/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

By use of a He jet system coupled to a Bernas-Nier ion-source, several new mass-separated A = 122 - 127 isotopes reached in heavy ion fusion reactions at SARA have been identified and studied. From experimental decay properties of La isotopes, systematics of low-lying energy levels have been extended for even-even and odd-A barium. New informations on Ce decay schemes are briefly reported.

37582 (AD-A–205221/5/XAB) **Gamma-ray-laser pump diagnostic. Final report.** Collins, C.B. General Coherent Technology, Inc., Richardson, TX (USA). 18 Jan 1989. 80p. Available from NTIS, PC A05/MF A01.

The nuclear analog of the ruby laser would embody the most straightforward of the several concepts for a gamma-ray laser. The greatest progress toward an ultrashort-wavelength laser has been achieved along that direction. For ruby the identification and exploitation of a bandwidth funnel were the critical keys in the development of the first laser. There was a broad absorption band linked through efficient cascading to the narrow laser level. The search for the analogous situation on the nuclear scale is proceeding quite fruitfully. Significant amounts of nuclear fluorescence have been pumped by pulsed bremsstrahlung sources; thus proving that the concept of bandwidth funneling works as well at the nuclear level as it does for the ruby. This critical process was found to produce eleven orders of magnitude increase in the amount of X-ray pump energy absorbed into demonstration nuclei of Se 77. Most recently, the first of the 29 candidate materials for a gamma-ray laser was successfully pumped with intense pulses of bremsstrahlung. The yield of nuclear fluorescence was about 10,000 times greater than what was predicted, including the large factor for funneling. Selected over 28 alternatives solely on the basis of availability, this first material narrowly missed the threshold of feasibility for a gamma-ray laser. These results with a relatively unattractive candidate indicate that the probabilities should be raised for full success of one of the other 28 materials.

37583 (DOE/ER/40481–2) **Measurement of solar proton-proton fusion neutrinos with a Soviet-American gallium experiment: Technical progress report.** Cherry, M.L. Louisiana State Univ., Baton Rouge, LA (USA). Dept. of Physics and Astronomy. Jun 1989. 6p. Sponsored by DOE Energy Research. DOE Contract FG05-88ER40481. Order Number DE89014563/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A gallium solar neutrino detector is sensitive to low-energy proton-proton fusion neutrinos. A flux of 70 SNU is expected in a gallium detector from the p-p reaction independent of solar model calculations. If, however, neutrino oscillations in the solar interior are responsible for the suppressed ^{8}B flux measured by the Homestake ^{37}Cl experiment, then a comparison of the gallium and chlorine results may make possible a determination of the neutrino mass difference and mixing angle. A 60-ton gallium detector is currently being constructed in the Baksan Laboratory in the Soviet Union, and should be taking data by the end of 1989.

37584 (INIS-mf–11396, pp. 82) **Lifetime of the O_2^+ state of ^{72}Ge.** Prozesky, V.M. (Atomic Energy Corp. of South Africa (Pty) Ltd., Pretoria (South Africa)); Mingay, D.W. 37585 (ANL/NDM–112) **Some remarks on the neutron elastic- and enelastic-scattering cross sections of palladium.** Chiba, S.; Guenther, P.T.; Smith, A.B. Argonne National Lab., IL (USA). May 1989. 15p. Sponsored by DOE Nuclear Energy. DOE

Contract W-31109-ENG-38. Order Number DE89014105/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The cross sections for the elastic-scattering of 5.9, 7.1 and 8.0 MeV neutrons from elemental palladium were measured at forty scattering angles distributed between ≈15° and 160°. The inelastic-scattering cross sections for the excitation of palladium levels at energies of 260 keV to 560 keV were measured with high resolution at the same energies, and at a scattering angle of 80°. The experimental results were combined with lower-energy values previously obtained by this group to provide a comprehensive data base extending from near the inelastic-scattering threshold to 8 MeV. That data base was interpreted in terms of a coupled-channel model, including the inelastic excitation of one- and two-phonon vibrational levels of the even isotopes of palladium. It was concluded that the palladium inelastic-scattering cross section, at the low energies of interest in assessment of fast-fission-reactor performance, are large (≈50% greater than given in widely used evaluated fission-product data files). They primarily involve compound-nucleus processes, with only a small direct-reaction component attributable to the excitation of the one-phonon, 2^+, vibrational levels of the even isotopes of palladium. 24 refs., 6 figs.

37586 (CRN-PN–88-02) **Neutron emission and nuclear spin distribution in 4n and 5n exit channels of the ^{156}Dy compound nucleus.** Vivien, J.P.; Benet, P.; Beck, F.A.; Byrski, T.; Curien, D.; Duchene, G.; Gehringer, C.; Haas, B.; Merdinger, J.C.; Bozek, E. and others. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1988. 14p. (CONF-880195–: 26. international winter meeting on nuclear physics, Bormio, Italy, 25-29 Jan 1988). Order Number DE89789273/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Experiments performed at the Chateau de cristal facility were undertaken to study the $^{32}S + ^{124}Sn \rightarrow ^{156}Dy$ fusion reaction at compound nucleus excitation energies of 59, 65 and 74 MeV. By tagging on the different isomers, neutron energies for the 4n and 5n exit channels have been studied by time of flight techniques. The corresponding nuclear spin distributions for the 4n and 5n channels have also been deduced from the γ-multiplicity distributions. Average nuclear temperatures, extracted from the neutron spectra, differ appreciably from those deduced from the measured total energy released by the γ-ray cascade.

37587 (CRN-PN–8513) **Fast-fission component with small mass drift in the reaction $^{84}Kr + ^{27}Al$ at E_{Lab} = 5.9 MeV/u.** Heusch, B.; Freiesleben, H.; Schneider, W.F.W.; Kohlmeyer, B.; Stege, H.; Puehlhofer, F. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1985. 20p. Order Number DE89789226/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

All reaction products in the range from target- and projectile-like to fission-like fragments were measured for the system $^{84}Kr + ^{27}Al$ at 5.9 MeV/u beam energy. They are assigned to the various reaction mechanisms on the basis of experimental signatures (energy dissipation, mass and angular distribution). The sum of the measured partial cross sections, including the evaporation residue yield obtained previously, agrees with the total reaction cross section derived from elastic scattering. A small fast-fission component was found, discernible from deep-inelastic reactions by its $1/\sin\theta$ angular distribution, and distinguished from compound-nucleus fission by an incomplete mass asymmetry relaxation.

37588 (IPNO-DRE–88-01) **Selective population of the highest spin n-p states in heavy nuclei via the (α, d) reaction at 218 MeV.** Langevin-Joliot, H.; Datar, V.; Gerlic, E.; Van de Wiele, J.; Azaiez, F.; Fortier, S.; Gales, S.; Guillot, J.; Maison, J.M.; Duhamel, G. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 13p. Order Number DE89789267/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Strong transitions to high spin states are observed in the study of the (α,d) reaction at 218 MeV on closed shell heavy nuclei. It is shown that the highest spin valence valence n-p strength in the residual nuclei ^{92}Nb, ^{122}Sb, ^{146}Eu and ^{210}Bi is shared between a first strongly excited fragment and higher lying groups. The valence + outer shell $(vi_{13}2/x\ \pi h_{11}2/)_{12}^-$ strength is tentatively identified in ^{122}Sb.

37589 (ISN–87-88) **Low-spin states in ^{122}Cs.** Weiss, B.; Gizon, A.; Liang, C.F.; Paris, P.; Isocele Collaboration. Grenoble-1 Univ., 38 (France). Inst. des Sciences Nucleaires. 1987. 4p. (CONF-8709440–: 5. International conference on nuclei far from stability, Rosseau Lake, CA, USA, 14-19 Sep 1987). Order Number DE89781515/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The decay of ^{122}Ba to the odd-odd ^{122}Cs levels has been studied with on-line mass-separated samples at the Isocele facility. A complex level scheme including 42 new low-spin excited states has been established using gamma and conversion electron spectroscopy techniques. From a series of new measurements, the T1/2 = 0.36s ^{122}Cs isomeric state is proposed at 127 keV with 5^- spin and parity assignments.

37590 **Magnetic moments of low-lying states in ^{103}Rh, ^{111,113}Cd, and ^{123,125}Te.** Benczer-Koller, N. (Department of Physics, Rutgers University, New Brunswick, New Jersey 08903(US)); Lenner, G.; Tanczyn, R.; Pakou, A.; Kumbartzki, G.; Pique, A.; Barker, D.; Berdichevsky, D.; Zamick, L. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(1): 77-90 (Jul 1989).

The magnetic moments of several short-lived states in ^{103}Rh, ^{111,113}Cd, and ^{123,125}Te isotopes have been measured by the transient field technique. The results, together with those obtained earlier in the ^{107,109}Ag isotopes, have been compared to predictions of various models and calculations. In the Z=45,47 isotopes, the odd proton seems to deform the vibrational core. The data are best explained within the framework of a triaxially deformed nucleus. In the odd-neutron isotopes with $50<N<82$ and Z=48,52, weak-coupling states coexist with single-particle states in a mix of configurations.

37591 (IPNO-DRE–88-02) **Collective structures in ^{185}Hg.** Bourgeois, C.; Hildingsson, L.; Perrin, N.; Sergolle, H.; Hannachi, F.; Bastin, G.; Porquet, M.G.; Thibaud, J.P.; Beck, F.A.; Merdinger, J.C. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 22p. Order Number DE89789264/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Excited states of ^{185}Hg have been investigated via the ^{161}Dy (^{28}Si, 4n) reaction at 145 MeV. In-beam gamma-ray spectroscopy studies have been performed with the "Chateau de Cristal" 4π-multidetector array. Level scheme of ^{185}Hg has been established. Shape coexistence, still present in ^{185}Hg like in the neighbouring Hg isotopes, manifests itself through a weakly populated decoupled band built on the 13/2+ isomer and three strongly-coupled bands built on the prolate 1/2-[521], 7/2-[514], and 9/2+[624] Nilsson states.

37592 (IPNO-DRE–88-31) **Shape transition in neutron deficient PT isotopes.** Le Blanc, F.; Kilcher, P.; Obert, J.; Oms, J.; Putaux, J.C.; Duong, H.T.; Pinard, J.; Liberman, S.; Savard, G.; Lee, J.K.P.; ISOCELE Collaboration. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 13p. Order Number DE89789268/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Isotope shift (IS) and hyperfine structure (HFS) measurements have been performed for ^{185}Pt, ^{187}Pt, ^{189}Pt, ^{191}Pt, ^{195}Pt using the PILIS (Post ISOCELE Laser Isobar Separation) apparatus installed at the ISOCELE facility. Magnetic and quadrupole moments have been deduced from the HFS results. The charge radius changes determined for these odd nuclei from the IS results, added to the $\delta \langle r^2 \rangle$ values of the even-A nuclei are compared to the results of lattice Hartree-Fock+BCS calculations for asymmetric solutions. ^{185}Pt is confirmed to be prolate shaped whereas ^{187}Pt, ^{189}Pt, ^{191}Pt are likely triaxial in their ground states.

37593 (IPNO-DRE–88-33) **Shape coexistence at high spin in ^{187}Au.** Bourgeois, C.; Perrin, N.; Sergolle, H.; Porquet, M.G.; Hannachi, F.; Bastin, G.; Beck, F. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 29p. Order Number DE89789269/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

High-spin states in ^{187}Au have been populated in the ^{172}Yb(^{19}F, 4n) reaction and studied with in-beam spectroscopic techniques using the "Chateau de Cristal" 4π-multidetector array. A comprehensive level scheme of ^{187}Au has been established. Experimental band crossing frequencies and gains in alignment were deduced. Shape coexistence in ^{187}Au, well established at low spin, is found to survive up to spin 57/2, and manifests itself through well separated oblate and prolate structures.

37594 (IPNO-DRE–88-34) **Decay of doubly-odd nucleus ^{184}Ir.** Kilcher, P.; Roussiere, B.; Sauvage, J.; Bourgeois, C.; Porquet, M.G.; Dautet, H.; Lee, J.K.P.; ISOCELE Collaboration. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 29p. Order Number DE89789266/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The ^{184}Ir β^+, EC decay has been investigated using the ISOCELE facility. A detailed ^{184}Os level scheme has been obtained. Spin and parity assignments have been deduced from transition multipolarities. The $Q_{\beta+}$ value has been measured to be 3260 $\pm$ 70 keV by means of a solid-state ΔE-E telescope and logft values have been calculated for the levels which are the most clearly fed. Two highly converted transitions have been pointed out. Contrary to results previously reported, the ground-state band of ^{184}Os is not directly populated. It is concluded that the ^{184}Ir ground state has spin and parity value $I^{\pi} = 4^-$ or 5^- with projection value K which may be 4 and/or 5. The ^{184}Os levels are compared to those of the other osmium isotopes and the structure of the 3_1^- level is discussed.

37595 (LA-UR–89-1649) **Particle production results from HELIOS.** Jacak, B. Los Alamos National Lab., NM (USA). 1989. 9p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-8905163–1: 3. conference on intersections between particle and nuclear physics, Rockport, ME, USA, 14-19 May 1989). Order Number DE89013454/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper shows that global variables such as transverse energy and multiplicity can be used to characterize events according to impact parameter. E_t and multiplicity show a linear relationship, indicating that higher E_t arises from production of more particles rather than a large change in the particle spectra. The shapes of the distributions can be explained by superposition of nucleon-nucleon scattering. There is no large difference among the observed charged particle spectra from p + W, O + W, and S + W. We observe no sharp rise in $\langle p_t \rangle$ vs E_t, but it must be noted that the detected $_{pt}$ spectrum is affected by the hadronization process and reflects conditions at the time of freezeout of hadrons. Also, an increase in the cross section for large pt is expected from hard scattering of partons and does not necessarily indicate more exotic processes. 10 refs., 6 figs.

Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Brookhaven Experiment 802 (E-802) is a magnetic spectrometer experiment which is directed toward the measurement of particle momentum spectra and particle-particle correlations following reactions with 14.5 GeV/u O and Si ions. In addition to the spectrometer there are detectors to measure the transverse energy flow, longitudinal energy flow, and the multiplicity. These detectors can be used to characterize the particle spectra or correlated between themselves. Particle spectra have been obtained for protons, pions, and kaons using targets of gold, copper, and aluminum although the data are not entirely analyzed as yet. A first result that is of interest is the K^+/π^+ ratio for Si + Au reactions which is larger than expected on the basis of the known p + p data. 4 refs., 11 figs.

37597 (CONF-8904153–3) **Attained energy densities and neutral pion spectra in nucleus-nucleus collisions at 200 GeV/nucleon.** Plasil, F.; Albrecht, R.; Awes, T.C.; Baktash, C.; Beckmann, P.; Berger, F.; Bock, R.; Claesson, G.; Clewing, G.; Dragon, L. WA80 Collaboration. Oak Ridge National Lab., TN (USA). 1989. 12p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From Symposium on nuclear dynamics and nuclear disassembly; Dallas, Texas, USA; 9-14 Apr 1989. Order Number DE89013536/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The main goal of the CERN heavy-ion experiments is the search for an indication that the predicted state of deconfined quarks and gluons, the quark-gluon plasma (QGP), has been produced. The quantity most crucial to the probability of QGP formation is the thermalized energy density attained during the heavy-ion reaction. The amount of energy radiated transverse to the beam direction is the experimental quantity which is believed to be a measure of the amount of energy deposition in the reaction, and hence to reflect the energy density attained. In this presentation we consider the systematics of transverse energy production at CERN SPS energies, and we use the results to make estimates, under various assumptions, of attained energy densities. 18 refs., 2 figs.

37598 (JINR-R–1-88-389) **Study on total disintegration of lead nuclei with magnesium-24 nuclei at 4.5 A GeV/c.** Krasnov, S.A.; Tolstov, K.D.; Shabratova, G.S. and others. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 11p. (In Russian). Order Number DE89619102/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Acta Phys. Slovaca.

The data on total disintegration of lead with magnetism nuclei at 4.5 A GeV/c momentum are presented. The comparison of these data with those on lead total disintegration by carbon nuclei at the same momentum per nucleon is made. The growth of the number of single charged relativistic particles, strengthening of the collimation of charged secondary emission, increasing of opposite side emission of produced and target destruction particles in the azimuthal plane, strengthening of side splash of these particles with growing mass of a nucleus-projectile are observed. An event with a high density of produced particles per pseudorapidity interval $\sim$ 100 has been registered. The probability of random appearance of this event is equal to 10^{-2}. Comparison with cascade-evaporation model is made. 6 refs.; 9 figs.; 3 tabs.

37599 (LBL–27116) **Excitation and multiple dissociation of projectiles at intermediate energy.** Pouliot, J.; Chan, Y.; Dacal, A.; DiGregorio, D.E.; Harmon, B.A.; Knop, R.; Ortiz, M.E.; Plagnol, E.; Stokstad, R.G.; Moisan, C. Lawrence Berkeley Lab., CA (USA). Apr 1989. 16p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8904153–2: Symposium on nuclear dynamics and nuclear disassembly, Dallas, Texas, USA, 9-14 Apr 1989). Order Number DE89012997/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Cross sections for the multiple breakup of ^{16}O, ^{14}N and ^{12}C projectiles scattered by a Au target were measured with an array of 34 phoswich detectors. The dissociation of the projectiles into as many as five charged particles has been observed. The yields of different exit channels correlate approximately with the threshold energy for separation of the projectile into the observed fragments. The excitation spectrum of the primary projectile-like nucleus was reconstructed from the measured positions and kinetic energies of the individual fragments. The energy sharing between projectile and target is consistent with a fast excitation mechanism in which differential increases in projectile excitation energy appear to be accompanied by comparable increases in target excitation. Calculations of the yields based on a sequence of binary decays are presented. The question of prompt or sequential decay is also considered by examining the directional correlations of the particles. 19 refs., 8 figs.

37600 **Heavy ion reaction studies of $Nb_{A}u$ at E/A = 50, 75 and 100 MeV.** Fields, D.J. (Lawrence Livermore National Lab., CA (USA)); Sangster, T.C.; Webb, M.L.; Remington, B.A.; Britt, H.C.;

Hansen, L.F.; Lanier, R.G.; Massoletti, D.; Namboodiri, M.N.; Struble, G.L. *Nuclear Physics [Section] A (Netherlands),* 495(1/2): 209c-221c (1 May 1989). (CONF-8810261–: International workshop on nuclear dynamics at medium and high energies, Bad Honnef, Germany, F.R., 10-14 Oct 1988).

We report on measurements of the system Nb+Au at incident energies of E/A = 50, 75 and 100 MeV made with a large solid angle, large dynamic range gas-scintillator array. We observe that in these reactions fission is the result of peripheral collisions. Somewhat less peripheral reactions result in heavy residues which do not undergo fission. More central reactions result in high multiplicities of light particles and intermediate mass fragments. Correlations between fragments, energetic light charged particles, and forward moving projectile-like fragments are presented to support these observations.

37601 (GANIL-T–88-02) **Heavy ions reactions below 100 MeV per nucleon: two contributions to the study of subthreshold pion production.** Erazmus, B. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France); Caen Univ., 14 (France). 1988. 152p. (In French). Order Number DE89789261/JAW. Available from NTIS (US Sales Only), PC A08/MF A01.

Angular correlation of fission fragments and branching ratio for fission were measured in the reaction $^{16}O + {}^{232}Th \rightarrow \pi^+ +$ fission. The distributions of impact parameter and linear momentum transfer in pionic collisions have been determined with a Monte-Carlo simulation and compared to the distributions obtained from several theoretical models of subthreshold pion production. A preliminary experiment was performed in order to test directly the model of coherent pion production in the peripheral reaction $^{12}C + {}^{12}C$ at 95 MeV/u. An estimation of the upper limit for the cross section of this mechanism was deduced. An extension of this collective model to all types of nuclear collisions is schematically presented.

37602 (GSI–89-40(prepr.)) **Discovery and confirmation of fission.** Herrmann, G. Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); Mainz Univ. (Germany, F.R.). Inst. fuer Kernchemie. Apr 1989. 20p. (CONF-890491–: International conference on fifty years of research in nuclear fission, Berlin, Germany, F.R., 3-7 Apr 1989). Available from Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.).

An outline of the history of fission is presented beginning 1934, when fission products were first produced by neutron-irradiation of uranium but were attributed to transuranium elements, till December 1938, when fission was discovered with radiochemical techniques and confirmed in the following weeks with physical methods.

37603 (HMI-B–463) **Multiplicity of neutrons from violent heavy-ion collisions: $^{40}Ar + Th$ and U from 10 to 77 MeV/u.** Jahnke, U.; Cramer, B.; Ingold, G.; Schwinn, E.; Charvet, J.L.; Frehaut, J.; Lott, B.; Morjean, M.; Patin, Y.; Pranal, Y. Dec 1988. 22p. (CONF-8809118–: 20. summer school on nuclear structure studies by means of nuclear reactions: heavy ions in nuclear and atomic physics, Mikolajki, Poland, 2-11 Sep 1988). Order Number DE89783054/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

With large 4π scintillator tanks the multiplicity of neutrons released from the most dissipative reactions in 10 to 77 MeV/u ^{40}Ar induced collisions with Th and U nuclei has been investigated. The central issue is the relation between the fission-fragment folding angle or linear momentum transfer and the multiplicity of evaporated neutrons and charged particles or dissipated energy. Their multiplicity points to a 'soft saturation' of the maximum energy deposit with increasing bombarding energy near 700 MeV of excitation. Unlike the folding-angle distributions, the inclusive neutron multiplicity spectra, which are unbiased by specific decay properties of the intermediate nuclear system, do not show a decline of the most dissipative processes within this range of incident energy.

37604 (JINR-R–15-88-385) **Study on fragment charge and mass fragmentation in ^{235}U fission with resonance neutrons.** Bogdzel', A.A.; Gundorin, N.A.; Duka-Zolyomy, A.; Kliman, J.; Kristiak, J. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics. 1988. 12p. (In Russian). Order Number DE89619108/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The results of the study of charge and mass fragmentation during ^{235}U fission with resonance neutrons are presented. The techique was used based on measuring the instant gamma-radiation from fission fragments. Parameters of isobaric yield distribution and the values of even-odd effect for a light and heavy fragment groups are presented. 15 refs.; 4 figs.; 3 tabs.

37605 (UCRL–101086) **Technique for fission measurements of highly active and weak cross-section actinides.** Block, R.C.; Slovacek, R.E.; Hoff, R.W.; Nakagome, Yoshihiro. Lawrence Livermore National Lab., CA (USA). 1989. 14p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890406–24: Fifty years with nuclear fission conference, Gaithersburg, MD, USA, 25-28 Apr 1989). Order Number DE89014102/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The Rensselaer Intense Neutron Spectrometer (RINS) system provides an intense neutron source that is well suited for measuring the fission cross sections of microgram quantities of highly-active actinides and gram quantities of nuclei with very weak cross sections. The system consists of a 75-ton lead assembly driven by the RPI electron linac, and the neutron fluxes are three-to-four orders of magnitude more intense than those available in conventional time-of-flight measurements. Examples of measured cross sections of curium isotopes ^{238}U and ^{232}Th are presented. 17 refs., 10 figs., 1 tab.

37606 (ANU-P–986) **Measurement and statistical model analysis of pre-fission neutron multiplicities.** Newton, J.O.; Hinde, D.J.; Charity, R.J.; Leight, J.R.; Bokhorst, J.J.M.; Chatterjee, A.; Foote, G.S.; Ogaza, S. Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. Jan 1988. 48p. Order Number DE89619039/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The average number of neutrons preceding fission was measured for the compound systems ^{168}Yb, ^{178}W, ^{188}Pt, ^{192}Pb, ^{198}Pb, ^{200}Pb, ^{210}Po, ^{213}At and ^{251}Es formed by reactions induced by ^{16}O, ^{18}O, ^{19}F, ^{28}Si or ^{30}Si projectiles with energies (E) between 4.9 and 7.2 MeV/A. In some cases ν is seen to increase with increasing E above a threshold energy (E_{th}) whereas the statistical model indicates that it should decrease. Below E_{th}, the variation of ν with E is consistent with statistical model predictions. The deviations above E_{th} have been attributed to dissipative effects not included in the model. Extensive statistical model and chi-squared analyses of the pre-fission data below E_{th} and of fission and fusion excitation function data, previously measured, were made. The diffuseness parameters of the fusion spin-distributions agreed reasonably well with those suggested by the zero-point motion model. The ratios of level densities at saddle and equilibrium deformations were found to be consistent with a value of unity, and the fission barriers consistent with the predictions of the finite-range rotating liquid-drop model.

37607 (ANU-P–988) **Mass-split dependence of the pre- and post-scission neutron multiplicities for fission of ^{251}Es.** Hinde, D.J.; Leigh, J.R.; Bokhorst, J.J.M.; Newton, J.O.; Walsh, R.L.; Boldeman, J.W. Australian National Univ., Canberra (Australia). Dept. of Nuclear Physics. Jul 1987. 37p. Order Number DE89619040/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Pre- and post-scission neutron multiplicities have been measured as a function of fission mass-split for the reactions of 105 and 120 MeV ^{19}F with ^{232}Th. The post-scission multiplicities show no

evidence for persistence of the sawtooth yield observed for spontaneous fission of ^{252}Cf; the dependence on mass-split is not consistent with the random neck rupture model. The pre-scission multiplicities show no evidence of quasi-fission for asymmetric mass-splits. It is proposed that pre-scission neutron multiplicity measurements should be a useful tool in studying quasi-fission produced by reactions with heavier projectiles.

37608 (GANIL-P–88-04) **Compressional effects in heavy ion collisions: spinodal decomposition and thermal energy saturation.** Suraud, E.; Pi, M.; Schuck, P.; Remaud, B.; Sebille, F.; Gregoire, C.; Saint-Laurent, F. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1988. 15p. Order Number DE89789231/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Using a kinetic equation (the Landau-Vlasov equation) an analysis of the balance between thermal and collective energies is performed for the heavy-ion collisions in the 30-100 MeV/u bombarding energy range. It is shown that a substantial amount of energy is stored in the compression modes, which limits strongly the excitation energy available for particle evaporation, in strong correlation with the experimentally-observed trend. Secondly the related phenomenon of spinodal decomposition is studied in detail within the present theory. The sensitivity of the amplitude and frequency of the monopole oscillation to the nuclear incompressibility modulus is discussed.

37609 (IC–89/19) **Enlarged superfluid model of atomic nucleus.** Dumitrescu, O.; Horoi, M. International Centre for Theoretical Physics, Trieste (Italy). Jan 1989. 27p. Order Number DE89618976/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The well known superfluid model (or quasiparticle phonon nuclear model (QPNM)) of atomic nucleus is enlarged by including an adequate four-nucleon effective interaction in addition to the pairing and long-range effective residual interactions. New experimental data can be explained without affecting those observables already described by the QPNM and in addition new features can be enumerated: (1) superfluidities of the neutron and proton systems may be generated by one another; (2) the phase structure is enriched by a new superfluid phase dominated by alpha-type correlations (ATC) and (3) superfluid isomers and their bands of elementary excitations are predicted. Unusual large two-nucleon and alpha transfer reactions cross sections as well as some unusual large alpha decay widths can be explained. (author). 46 refs, 3 figs, 2 tabs.

37610 (INDC(CCP)–293/L, pp. 49-57) **Evaluation of total interaction cross-sections for nuclei with mass number 3.** Zvenigorodskij, A.G.; Guzhovskij, B.Ya.; Abramovich, S.N.; Zherebtsov, V.A.; Pelipenko, O.A. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Jan 1989. In *Translation of selected papers published in Nuclear Constants 3, 1985.* Order Number DE89613037/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

Original report in Russian was distributed as INDC(CCP)-252/G.

The paper presents some aspects of evaluating the cross-sections for the reactions $^3H(t,2n)^4He$, $^3He(^3He,2p)^4He$, $^3He(t,x)n$ and $^3He(t,d)^4He$ which are important in the field of thermonuclear fusion and astrophysics. 4 figs, 6 tabs.

37611 (INDC(NDS)–214/LJ, pp. 91-98) **On the two gas approach for exciton model master equation.** Reffo, G. (ENEA, CRE Clementel, Bologna (Italy)); Herman, M.; Costa, C. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Jan 1989. (CONF-880239–: 2. research co-ordination meeting on methods for the calculation of fast neutron nuclear data for structural materials of fast and fusion reactors, Vienna, Austria, 14-20 Feb 1988). In *Status review of methods for the calculation of fast neutron nuclear data for structural materials of fast and fusion reactors. Texts of invited papers presented during the second research co-ordination meeting, Vienna, 15-17 February 1988.* Order Number DE89008469/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

A new version of the two component exciton model with introduction of shell model quasi-particle state densities is presented. A transformation of the master equation is proposed to facilitate the calculations. On this basis, flux flow between different substages of the composite nucleus is analysed and large discrepancies are found in the strength of various transitions. (author). 8 refs, 5 figs.

37612 (INDC(NDS)–214/LJ, pp. 69-74) **Consistent systematics of nuclear level densities for mean and heavy nuclei.** Grudzevich, O.T. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.); Ignatyuk, A.V.; Plyaskin, V.I. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Jan 1989. In *Status review of methods for the calculation of fast neutron nuclear data for structural materials of fast and fusion reactors. Texts of invited papers presented during the second research co-ordination meeting, Vienna, 15-17 February 1988.* Order Number DE89008469/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

The systematics of the experimental data on the density of neutron resonances and low-lying levels is considered taking into account the vibrational increase of the level density together with the shell and superconductive effects. (author). 12 refs, 2 figs.

37613 (INDC(NDS)–214/LJ, pp. 7-24) **Some fundamental aspects of the optical potential for the interaction of fast neutrons with cobalt.** Smith, A.B. (Argonne National Lab., IL (USA)); Lawson, R.D. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Jan 1989. (CONF-880239–: 2. research co-ordination meeting on methods for the calculation of fast neutron nuclear data for structural materials of fast and fusion reactors, Vienna, Austria, 14-20 Feb 1988). In *Status review of methods for the calculation of fast neutron nuclear data for structural materials of fast and fusion reactors. Texts of invited papers presented during the second research co-ordination meeting, Vienna, 15-17 February 1988.* Order Number DE89008469/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

Differential elastic- and inelastic-scattering cross sections, measured from approx. 1.5 to 10.0 MeV, are interpreted in terms of spherical-optical-statistical (OM) and coupled-channels models. A successful description of the differential elastic scattering below 10 MeV and the total cross section to 20.0 MeV is achieved using the spherical OM with energy-dependent strengths and geometries. These energy dependencies are large below approx. 7.0 MeV, but become smaller and similar to those reported for "global" potentials at higher energies. This change in the energy dependence of the parameters probably marks the onset of the Fermi surface anomaly approx. 19 MeV above the Fermi energy. Inelastic scattering to the levels below 1.8 MeV displays a forward peaked behavior. This non-statistical component is interpreted using the weak coupling model in which the f_72/proton hole is coupled to the 2^+ state in ^{60}Ni. This model provides an explanation of the unusual energy dependence and relatively small radius found for the imaginary OM potential. The coupling also contributes to the large value of this potential. The real spherical OM potential derived from the neutron-scattering results is extrapolated to bound energies using the dispersion relationship and the method of moments. The resulting real-potential strength and radius peak at approx. -10.0 MeV, whereas the real diffuseness is at a minimum at this energy. The extrapolated potential is approx. 8% larger than that implied by reported particle-state energies, and approx. 13% smaller than indicated by hole-state energies. (author). 42 refs, 8 figs.

37614 (INDC(NDS)–214/LJ, pp. 25-47) **Optical-model calculations for experimental interpretation and evaluation: Practical considerations and fundamental implications.** Smith, A.B. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

The report presents the status of the project concerning the measurement, calculation and evaluation of neutron data for structural materials in the mass regions A approx.= 50-60, 90-100 and 204-209. Figs.

37615 (INDC(NDS)–214/LJ, pp. 49-68) **Neutron optical model potential.** Hodgson, P.E. (Oxford Univ. (UK). Nuclear Physics Lab.). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Jan 1989. (CONF-880239–: 2. research co-ordination meeting on methods for the calculation of fast neutron nuclear data for structural materials of fast and fusion reactors, Vienna, Austria, 14-20 Feb 1988). In *Status review of methods for the calculation of fast neutron nuclear data for structural materials of fast and fusion reactors. Texts of invited papers presented during the second research co-ordination meeting, Vienna, 15-17 February 1988.* Order Number DE89008469/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

The present status of optical model calculations of neutron scattering and interactions is reviewed, with special emphasis on more recent developments and the more promising lines of research. The use of dispersion relations to provide an extra constraint on the potential is discussed, together with their application to studies of the Fermi surface anomaly. The application of potential inversion techniques to determine the form of the potential is also considered. (author). 39 refs, figs.

Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

An analysis of excitation functions and particle emission spectra in neutron reactions with nuclei in the mass range 50-70 has been performed within the framework of theoretical models of nuclear reactions. 19 refs, 7 figs.

37619 (INDC(NDS)–214/LJ, pp. 111-125) **Investigation of the angular distribution of secondary energy dependent inelastic neutron cross sections in structural materials using Blann's geometry dependent hybrid model.** Bahm, E. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik); Jahn, H. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Jan 1989. (CONF-880239–: 2. research co-ordination meeting on methods for the calculation of fast neutron nuclear data for structural materials of fast and fusion reactors, Vienna, Austria, 14-20 Feb 1988). In *Status review of methods for the calculation of fast neutron nuclear data for structural materials of fast and fusion reactors. Texts of invited papers presented during the second research co-ordination meeting, Vienna, 15-17 February 1988.* Order Number DE89008469/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

The measured results for the 14.6 MeV inelastic neutron cross-sections show considerable experimental errors in particular in forward direction. Also remarkable discrepancies between these measured results of the different experimental groups are to be observed. Consequently it is not possible to draw definitive conclusions concerning the validity of the various concepts of nuclear reaction mechanisms from these inaccurate measured results. In this paper we show that the situation is considerably improved if we add information from the results of measurements of the inelastic proton scattering cross-sections. With this additional information we obtain a sufficient starting point to calculate rather accurate and unique results for the double differential cross-sections of inelastic neutron scattering at the high energy tail of the secondary energy. This is demonstrated by a few examples of ^{56}Fe. Moreover by applying certain averages to the angle integrated inelastic cross-sections the results of the geometry dependent hybrid model are obtained. Consequently this might be a hint to a more rigorous derivation of this model. (author). 21 refs, 5 figs, 1 tab.

37620 (INFN/BE–89/3) **Generalised exciton model theories for the description of pre-equilibrium angular distributions.** Gadioli, E. Istituto Nazionale di Fisica Nucleare, Milan (Italy). 22 Feb 1989. 21p. (CONF-890198–2: International conference on nuclear reaction mechanism, Calcutta, India, 3-9 Jan 1989). Order Number DE89013025/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI.

The theories proposed to reproduce, in the framework of the exciton model, the angular distributions of pre-equilibrium particles are reviewed. It is shown that, contrary to a widespread opinion, the most refined calculations based on these theories allow a satisfactory reproduction of the experimental data, that is comparable to that obtainable with quantum-mechanical multistep theories. 28 refs., 8 figs.

37627 (IPNO-DRE–87-38) **Spin value of ^{184}Ir ground state.** Bourgeois, C.; Kilcher, P.; Roussiere, B.; Sauvage, J.; Porquet, M.G.; Dautet, H.; Lee, J.K.P.; Isocelle Collaboration. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1987. 26p. Order Number DE89789229/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

In order to determine the spin value of the ^{184}Ir ground state its β^+/EC decay has been investigated using the ISOCELE facility. A detailed ^{184}Os level scheme has been obtained. Spin and parity assignments have been deduced from transition multipolarities. The $Q_{\beta+}$ value has been measured to be 3260 $\pm$ 70 keV by means of a solid state ΔE-E telescope and log ft values have been calculated for the levels which are the most clearly fed. Contrary to results previously reported, the ground-state band of ^{184}Os is not directly populated. It is concluded that the ^{184}Ir ground-state has spin and parity value I^π : 4^- or 5^- with projection value K which may be 4 and/or 5. The ^{184}Os levels are compared to those of the other osmium isotopes and their structure discussed.

37628 (IPNO-DRE–87-40) **Excitation of the Δ resonance in heavy ion charge exchange reactions.** Roy-Stephan, M. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Jun 1987. 10p. (CONF-8709200–: 1. topical meeting on giant resonance excitation in heavy-ion collisions, Legnaro, Italy, 21-25 Sep 1987). Order Number DE89781508/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

Results on the Δ excitation by heavy ion charge exchange are presented. 900 MeV per nucleon ^{12}C, ^{16}O, ^{20}Ne and 1100 MeV per nucleon ^{12}C have been used. The Δ excitation strength depends on the projectile - ejectile nature and on the incident energy. The role of the target mass is also discussed. The peak for the Δ in nuclei is energy shifted from the free Δ peak.

37629 (IPNO-DRE–87-42) **High lying and high spin states in heavy nuclei via transfer reactions.** Langevin-Joliot, H. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. Oct 1987. 53p. (CONF-8710231–: 8. international school on nuclear physics, neutron physics and nuclear energy, Varna, Bulgaria, 19-28 Oct 1987). Order Number DE89781507/JAW. Available from NTIS (US Sales Only), PC A04/MF A01.

Our knowledge of the nucleus response to single particle and two particle modes of excitation has made significant progresses for the recent years. The general properties of transfer reactions, the independent particle model approach, the spreading process of the bare hole or particle states are briefly recalled in the introduction. High lying single particle modes have been identified in many heavy nuclei as 'giant structures'. Selected examples are presented to illustrate the experimental methods and the recent trends with emphasis on the study of proton hole states up to very high excitation energy. Giant structures have also been observed via two neutron pick-up reactions. These valence deep hole states are briefly surveyed with emphasis on the localization of their higher spin components. The recent observation of high spin and high lying neutron-proton particle levels and structures is then presented and discussed.

37630 (IPNO-DRE–88-21) **Isovector and isoscalar spin-flip excitations in even-even s-d shell nuclei excited by inelastic proton scattering.** Marty, N.; Morlet, M.; Willis, A.; Djalali, C.; Crawley, G.M.; Anantaraman, N.; Brown, B.A.; Galonsky, A. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 30p. Order Number DE89789224/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Forward-angle cross sections for 1^+ states have been measured in ^{24M}g ^{26}Mg, ^{28}Si and ^{32}S by 201 MeV proton inelastic scattering. Comparisons are made with (γ, γ'), (e,e') and (p,n) results. The measured strength is compared with microscopic distorted-wave Born approximation calculations using large scale shell model wave functions. Ratios of experimental to theoretical 1^+ strengths are given. Almost no quenching is observed.

37631 (JINR-E–4-88-543) **Dipole octupole correlations in a boson model and evidence for their existence in nuclei.** Mikhajlov, I.N.; Nadzhakov, E.G.; Aiche, M.; Schulz, N.; Vanin, V.; Briancon, Ch. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires; Paris-11 Univ., 91 - Orsay (France). Centre de Spectrometrie Nucleaire et de Spectrometrie de Masse. 1988. 10p. Order Number DE89618987/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Submitted to the journal J. Phys., G.

The interacting multi boson model (IMBM) introduced earlier, in its spdf boson case, is applied to a new experiment on the vibrational nucleus $^{218}_{88}Ra_{130}$. It is shown to describe in a ntural way, with the essential participation of pf bosons, both the ground yrast bands with positive and negative parity, and the peculiar side yrare bands with the same space π and opposite spin (-(1)) parity. So this experiment together with its boson interpretation can be viewed as evidence for the existence of combined dipole octupole correlations in nuclei. 9 refs.; 2 figs.; 1 tab.

37632 (JINR-R–1-88-331) **Automodel properties of baryon clusters in interactions of p-, d-, He-, C- and π^--particles with**

carbon nuclei within 4-40 GeV/c per nucleon momentum interval. Baldin, A.M.; Grishin, V.G.; Didenko, L.A.; Kuznetsov, A.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1988. 18p. (In Russian). Order Number DE89619019/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Yad. Fiz.

The properties of baryon clusters produced in interactions of p-, d-, He-, C- and π^--particles with carbon nuclei are studied for the experimental verification of principle of the correlation depletion and those of the second ranke automodelity formulated in the relativistic invariant approach. It is shown that baryon clusters produced in the intermediate region of relativistic nuclear interactions are characterized by universal properties over two similar parameters: scale noninvariant b_k and scale invariant x_k, i.e. proton distributions in clusters for the same nuclear target on these variables depend neither on the type of the projectile not on its energy within the 4-40 GeV interval. 12 refs.; 12 figs.; 4 tabs.

37633 (JINR-R–3-88-371) **Intensive two-quantum cascades and fragmentation of quasiparticle states in some deformed nuclei.** Boneva, S.T.; Vasil'eva, Eh.V.; Malov, L.A.; Popov, Yu.P.; Sukhovoj, A.M.; Khitrov, V.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics. 1988. 12p. (In Russian). Order Number DE89618988/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to the journal Yad. Fiz.

Distributions of sums of intensities of primary γ-transitions following neutron capture (their low limit) are compared with strength distributions of fragmented single-quasiparticle states of the deformed Saxon-Woods potential in dependence on excitation energy of ^{165}Dy, ^{175}Yb and ^{179}Hf compound nuclei. The calculated interval of maximum strength of fragmented states 510arrow up, 521arrow down, 501arrow down and 501arrow up coincides within a few hundreds keV with the excitation energy range of the observed enhancement of primary transitions. This enhancement is assumed to be due to the presence of appreciable single-quasiparticle wave function components of two excited states connected by a primary transition. 15 refs.; 4 figs.

37634 (JINR-R–15-88-386) **Analysis of dynamic characteristics of ^{235}U fission with resonance neutrons on the basis of data on fission fragment charge and mass fragmentation.** Gundorin, N.A.; Duka-Zolyomy, A.; Kliman, J.; Kristiak, J. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics. 1988. 13p. (In Russian). Order Number DE89619046/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

On the basis of analysis of isobaric disribution dispersion of fission fragments and even-odd proton and neutron effect values appearing at the ^{236}U fission with resonance neutrons the value of internal excitation energy is estimated ed as 5,9 MeV and dissipation energy as 5 MeV. Deformation energy at the rupture point is estimated to be equal to 13,6-16,6 MeV. These values are in agreement with the calculations for two-body dissipation on condition that the coefficient of dynamic viscosity of nuclear matter is $1{,}10^7$. 33 refs.; 1 tab.

37635 (Lund-MPh–87/06) **On the feeding and spectroscopy of superdeformed states.** Aberg, S. Lund Inst. of Tech. (Sweden). Dept. of Mathematical Physics. Mar 1987. 33p. (CONF-870153–: 25. international winter meeting on nuclear physics, Bormio, Italy, 19-24 Jan 1987). Order Number DE89783600/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Based on a cranked Nilsson calculation we discuss some spectroscopic properties of superdeformed nuclei, like quadrupole moments, g-factors, energies and moments of inertia. In light of recent experimental information about superdeformations in ^{152}Dy, possible feeding mechanisms of these states are discussed. The high-spin level density is calculated in a microscopic model, and the number of superdeformed states, compared to normal-deformed states, is found to be high for high spins and for low excitation energies. This suggests favoured regions in the (E_{exc},I)-plane for the feeding of superdeformed states. A microscopic model for rotational damping is presented, and the E2-strength function up to about 4 MeV excitation energy is studied. The rotatinal cooling at $1 \simeq 50$ in the superdeformed HD Dy is found to be much smaller than in the normal-deformed ^{168}Yb.

37636 (UCRL–99847) **Fission barriers for r-process nuclei and implications for astrophysics.** Meyer, B.S.; Mumlt oller, P.; Howard, W.M.; Mathews, G.J. Lawrence Livermore National Lab., CA (USA). 15 May 1989. 9p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890406–23: Fifty years with nuclear fission conference, Gaithersburg, MD, USA, 25-28 Apr 1989). Order Number DE89014265/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We present calculations of fission-barrier heights, beta decay energies, and neutron separation energies for nuclei with $76 \leq Z \leq 100$ and $140 \leq N \leq 184$. For these nuclear-structure calculations we use the macroscopic-microscopic method with a Yukawa-plus-exponential macroscopic model and a folded-Yukawa microscopic model. The barrier-heights we find are higher than those calculated in previous studies using the droplet macroscopic model. We discuss the implications of the new results on fission-barrier heights for astrophysics. 15 refs., 6 figs.

37637 Approximation of precompound effects in Hauser-Feshbach codes for calculating double differential (n, xn) cross sections. Fu, C.Y. (Oak Ridge National Lab., Oak Ridge, TN (US)). *Nuclear Science and Engineering (USA)*, 100(1): 61-76 (Sep 1988).

A simplified method for approximating precompound nuclear reaction effects in Hauser-Feshbach codes for the calculation of double differential (n,xn) cross sections is presented. The method is developed from an existing quantum mechanical formula of unified compound and precompound reaction theories. The compound part of the unified formula is made identical to that of Hauser and Feshbach by applying the unified level-density formulas derived previously for the two theories. The precompound part, much more complicated than the compound part, is simplified and globally parameterized for practical purposes. Calculated double differential (n,xn) cross sections at 14 and 26 MeV for iron, niobium, and bismuth are shown to be in good agreement with the available experimental data.

37638 $K^{\pm}$, p^-, and Ω^- production in relativistic heavy ion collisions. Koch, P. (State University of New York at Stony Brook, Stony Brook, New York 11794(US)); Dover, C. B. *Physical Review [Section] C: Nuclear Physics (USA)*, 40(1): 145-155 (Jul 1989). DOE Contract AC02-76ER13001.

We discuss the production of antiprotons, kaons, and the Ω^- in nuclear collisions at relativistic energies in the framework of a simplifiedhadrochemical model. We point out the importance of Δ resonances forp^- as well as K^- production at 1–2 GeV/nucleon,particularly in the region below the threshold for their production inindividual *NN* collisions. Quark matter formation may enhanceΩ^- production to a measurable level at 15 GeV/nucleon.

37639 (CONF-8810118–10) **Density dependence of the momentum distribution in normal liquid ^{4}He.** Herwig, K.W.; Sokol, P.E.; Sosnick, T.R.; Snow, W.M.; Blasdell, R.C. Argonne National Lab., IL (USA). 1988. 25p. Sponsored by DOE Energy Research. DOE Contract W-31109-ENG-38. From Workshop on momentum distributions; Argonne, Illinois, USA; 24-26 Oct 1988. Order Number DE89014678/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Deep inelastic neutron scattering measurements on normal liquid ^{4}He at 4.25 K have been carried out at eleven densities between 0.125 (saturated vapor pressure) and 0.200 gm/cm^3, at a momentum transfer of 23 Å^{-1}. A sum of two Gaussians is required to characterize the scattering at all densities, even when the broadening due to instrumental resolution and corrections to the impulse approximation are included. The kinetic energy varies from 15.5 K at 0.125 gm/cm^3 to 3.27 K at 0.200 gm/cm^3. 24 refs., 9 figs., 2 tabs.

37640 (CNEA-N–2/87) **Safety guide of the Tandar accelerator.** Comision Nacional de Energia Atomica, Buenos Aires

(Argentina). Dept. de Fisica. 1987. 16p. (In Spanish). Order Number DE89619917/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The safety standards that the installations of the Tandar accelerator have to comply with are presented here. In order to maintain the safety, the knowledge and the accomplishment of these standards are mandatory for all persons. The risks of external irradiation and of contamination are pointed out. The risks at the Tandar are: the calibration standards used at the premises and the irradiation produced by the activity of the accelerator, which can be primary, secondary, induced or X rays. The identification of the different areas of installation are given with their corresponding classification; the rules concerning the manipulation of radioactive materials and the movement of persons in areas of reglamentary access are established. Finally conventional safety and rules for evacuation and fires are presented. (M.E.L.).

37641 (INFO–0257) **Comparing personal alpha dosimetry with the conventional area monitoring-time weighting methods of exposure estimation: a Canadian assessment.** Balint, A.B.; Viljoen, J. Atomic Energy Control Board, Ottawa, ON (Canada). Jan 1988. 24p. Order Number DE89619936/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

An experimental personal alpha dosimetry program for monitoring exposures of uranium mining facility workers in Canada has been completed. All licenced operating mining facilities were participating. Dosimetry techniques, description of dosimeters used by licences, performance and problems associated with the implementation of the programme as well as technical and administrative advantages and difficulties experienced are discussed. Area monitoring-time weighting methods used and results obtained to determine individual radon and thoron daughter exposure and exposure results generated by using dosimeters are assessed and compared.

As a result of the adoption of the Council of the European Communities Directive No. 80/836 Euratom which lays down the basic safety standards for the health protection of the general public and workers against the dangers of ionizing radiation, there is a need for nominating Approved Medical Officers whose functions in respect of hospital workers are outlined in the Department of Health Circular, Oct. 1983 (Appendix 1), and which are considered applicable to all other workers. This document outlines the role of the Approved Medical Officer and proides information to aid him/her in this work

37645 (INIS-SU–82) **Radiation hygiene. Collection of scientific papers.** Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. 189p. (In Russian). Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01.

Individual papers in this collection are separately indexed.

37646 (INIS-SU–82, pp. 5-8) **Main trends of radiation hygiene development in 9 Five-Jear Plan.** Ramzaev, P.V.; Arkhangel'skaya, G.V.; Tikhonova, A.I. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Native and foreign literature on substantiation of prospects of radiation hygiene development and optimum solution of the most vital problems are analysed. The following trends are called the main ones: dosimetric, estimation of low dose irradiation negative effect and the effect degree depending on prenatal irradiation, estimation of genetic effects of irradiation. Much attention is paid to analysis of acutetotal and local-radiation effects and to development of radiation protection means and ways. 7 refs.

37647 (INIS-SU–82, pp. 22-26) **Formation of gamma background of building materials with additives of slags and ashes from coal thermal power plants.** Obukhova, O.L. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Radiation background of building materials with coal additives is established. The obtained dose rate values for cinder block buildings were not so high as those of usual building materials (the difference didn't exceed 70%). But when measuring natural radionuclide content in native coils of different deposits coal with specific activity greatly exceeding the data obtained from measuring the building material samples occurred. Use of such coal wastes will result in abrupt increase of people irradiation in buildings, but even that incresae, as a rule, does not fall outside the limits of usual fluctuations of natural radiation background. 7 refs.; 2 tabs.

37648 (INIS-SU–82, pp. 26-29) **Experimental data on weakening gamma-radiation by boring well.** Prokof'ev, O.N.; Minina, O.B. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Coefficient of boring well weakening gamma-radiation from fall-out is experimentally determined. A plane gamma source is imitated using 2390 MBq ^{137}Cs point source. Five wells 2 cm in diameter and 10 cm in depth were sited on experimental ground. The radiation source was placed 5, 10 and 20 cm above the earth, above the central well and displaced. Thermoluminescent dosimeters were disposed on the ground near the mouth and on each well floor. The experimental data confirm boring well weakening of gamma-radiation from fall-out on the ground surface. 1 ref.; 1 tab.

37649 (INIS-SU–82, pp. 33-38) **Review of investigations concerning radioactive aerosol deposition in lungs of man.** Korelina, N.F. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

On the basis of reviewed data on coefficients of radioactive aerosol deposit in respiratory tract of man a conclusion is made that MKRZ model suggested in 1966 satisfactorily (not accounting biological variability) describes coefficients of radioactive particle deposition in different parts of human respiratory tract during inhalation of 0.2-200 μm aerozols. It is marked that human respiratory system is subdivided into 3 main parts: rhinopharyngeal, tracheobronchial and alveolar. Deposition coefficients in tracheobronchial part over the past few years of experiments are approximately 10-15% higher than in MKRZ model. It is stated that when calculating the lung doses different sources of depositon factor variability, relating to dispersion of radioactive particles, standard biological variability and lung pathology must be taken account of. 22 refs.

37650 (INIS-SU–82, pp. 9-14) **Theory and practice of sanitary inspection of radiological units.** Poplavskij, K.K.; Karlin, N.E.; Katsnel'son, G.M.; Koroleva, T.M.; Lisenkova, L.N.; Smorodintseva, G.I.; Travnikova, I.G. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

A report based on analysis of long-term inspections of the RSFSR sanitary epidemiologic station (SES) radiologic groups (RG) is presented. It reflects optimum organization forms and methods of sanitary inspections of radiological units. A full-scale functioning of the local RGs is an important measure reducing inspection period and increasing its efficiency. 6 refs.

37651 (INIS-SU–82, pp. 98-102) **Hygienic significance of radiostability as measures of adaptive feasibilities.** Kudritskij, Yu.K. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

An attempt is made to substantiate hygienic significance of radiostability analysis as measures of adaptive feasibilities variation under the low dose ionizing radiation effect (IR). Examples of this substantiation are presented. Not only biological radiation effects but social adaptivity problems may be analysed. With more information adaptive feasibilities of human body to radiation factor are extended, its radiostability increases. Analysis of the state of adaptive feasibilities and their development estimation are vital problems of radiation hygiene, the basis for regulation and normalization of radiation factor. 19 refs.

37652 (INIS-SU–82, pp. 114-117) **On improved medical surveillance of personnel operating with radiation sources.** Stepanov, A.I.; Saperov, S.K. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Possibilities of improved medical surveillance of personnel operating with radiation and of population critical groups are shown. Medical surveillance can be improved by organization of mobile clinicodiagnostic laboratories and physical examination on places. Medical board activities can be greatly contributed by sanitary epidemiologic station activity. 4 refs.

37653 (INIS-SU–82, pp. 117-121) **Doses of occupational irradiation of medical personnel of the RSFSR.** Alekseeva, V.A.; Kovalenko, V.I.; Lebedev, O.V. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Annual doses of occupational irradiation of radiologists and roentgenologists of Leningrad and some RSFSR districts are determined and analyzed. Annual average irradiation of radiological personnel of the RSFSR in comparison with UNSCEAR safety standards for other countries are presented. The irradiation doses are shown to be simular. The highest annual average radiation dose is taken by radiological personnel during intracavitary therapy. Analysis of obtained data permitted to bring to light groups of medical personnel and some institutions where improvement of labour conditions can be carried out. 9 refs.; 4 tabs.

37654 (INIS-SU–82, pp. 126-131) **Radiation hygienic characteristic of working conditions and health of women operating in X-ray diagnostic departments.** Liberman, A.N.; Farbtukh, T.A. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

The effect of occupational factors of radiation and nonradiation nature on health of women operating in X-ray diagnostic departments and their progeny is studied. It is shown that present-day radiation and nonradiation effects in X-ray diagnostic departments have no noticeable effect on women health and their reproductive function. But slight changes of some immunological and hematological factors are traced. Results of carried out studies have enabled to depelop and implement methodical recommendations on estimation of working conditions and health of women operating in X-ray diagnostic departments. 14 refs.

37655 (INIS-SU–82, pp. 122-125) **Hygienic characteristic of working conditions and use of some evaluation methods of health of persons subjected to concomitant effect of industrial factors.** Karpov, V.B. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

To study peculiarities of hygienic-occupational effect of low-dose irradiation a comparative evaluation of working conditions and health of persons occupied in exhausting and testing of electron-beam tubes is carried out. Evaluation was based on results of 5-year prophylactic medical examinations and with due account of physiological, hematological and some other factors. To study general condition of people a modernized Dembo-Rubinstein test and specially developed questionnaire of health self-evaluation is used. Along with helth self-evaluation Dembo-Rubinstein test includes helth self- evaluation accounting public complaints. The given investigation methods demonstrated its sufficient informativity and applicabi lity for evaluation of health of persons subjected to concomitan t effect of industrial factors. 1 ref.

37656 (INIS-SU–82, pp. 138-142) **Number of roentgenological procedures per one X-ray examination as quality index roentgenodiagnosis.** Mokrousova, Eh.V.; Yakubovskij-Lipskij, Yu.O. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Number of roentgenological procedures (RLP) per one X-ray examination (XRE) as quality indexes and population dose values per one XRE are presented. They may be used as initial data for qualitative estimation of roentgenodiagnosis and safety standards for human population in the RSFSR administrative ferritories in course of X-ray examination. 1 ref.; 4 tabs.

37657 (INIS-SU–82, pp. 142-145) **Peculiarities of cytogenetic efficiency of irradiation of patients in case of various types of mammography.** Kisel'gof, E.B. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

To attain minimum irradiation of patients during mammography and to choose adequate methods of mammary gland examination biological efficiency of irradiation based on analysis of cytogenetic modifications in peripheral blood lymphocytes in estimated. Cytogenetic methods permit to give an integral estimation of irradiation conditions, thus solving problems on comparative estimation of radiation safety level. Its application is justified in choosing new or modification of existing methods of total X-ray examination of people. 2 tabs.

37658 (INIS-SU–82, pp. 149-153) **Doses from natural sources of ionizing radiations and feasibilities of their restriction.** Krisyuk, Eh.M. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

The data testifying to the fact that the main contribution to the ionizing radiation mean dose for human population is made by natural sources are presented. Problems on restrictions of the population irradiation by natural sources are new for the radiation hygiene. Measures for descreasing the population irradiation by radon and its daughter products in building materials are presented. Feasibility of restricting the people irradiation by natural sources under working conditions are is shown. 13 refs.; 1 tab.

37659 (INIS-SU–82, pp. 161-167) **Equipment and methodical complex for measuring integral volumetrical activity of radon and its fission products.** Terent'ev, M.V.; Nekrasov, E.V.; Koroleva, N.A. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

A prototype of active radiometer for measuring integral valumetric activity of ^{222}Rn is developed. To exclude radon and its fission product penetration to the chamber a silicon rubber membrane is used. The sampler filter ring is replaced with a dielectric track detector in teflon ring holders and AFA-RSA-3 filter. During sampling the radon fission products decay and are detected. After exposure the detector is pickled in NaOH solution for visual examination and track counting. Spark method of track counting is also used. By their features the designed instruments are on a par with the best foreign analogues. 6 refs.

37660 (INIS-SU–82, pp. 131-138) **Actual problems and basic tendencies in radiation protection of patients in X-ray diagnosis.** Nikitin, V.V. Nauchno-Issledovatel'skij Inst. Radiatsionnoj Gigieny, Leningrad (USSR). 1987. (In Russian). In *Radiation hygiene. Collection of scientific papers.* Order Number DE89012152/JAW. Available from NTIS (US Sales Only), PC A09/MF A01; INIS.

Basic tendencies in optimization of X-ray examinations are presented. One of them is radiation protection of patients by technical re-equipment in roentgenology. The necessity of developing the dynamic system of irradiation standards for all X-ray diagnostic departments aimed at optimizing radiography conditions and decreasing personal and collective radiation doses is shown. It is also necessary to reduce the number of groundless and resultless X-ray diagnosis and reirradiation procedures caused by low quality of X-ray images. 11 refs.

37661 (ORNL/FTR–2880) **[Biospheric model validation in urban, terrestrial, and aquatic environments, Budapest, Hungary, Vienna, Austria, Neuherberg, and Schmallenberg, W. Germany, April 25–May 12, 1988]: Foreign trip report.** Blaylock, B.G.; Hoffman, F.O.; Bartell, S.M. Oak Ridge National Lab., TN (USA). 3 Jun 1988. 25p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE89014054/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Drs. Blaylock, Hoffman, and Bartell attended the Sixth Biospheric Model Validation Study (BIOMOVS) meeting in Budapest, Hungary. BIOMOVS is an international cooperative effort to test models designed for calculations of environmental transfer and bioaccumulation of radionuclides and other trace substances. The participants from ORNL served as task group leaders, sessions chairmen, scientific consultants, and contributors to modeling efforts and task discussions at this meeting. BIOMOVS is completing the third year of a 5-year study; many of the tasks assignments are nearing completion, and draft reports are being written. Three final reports were available for distribution. After the BIOMOVS meeting at the invitation of the International Atomic Energy Agency (IAEA), Dr. Hoffman attended a Coordinated Research Program meeting entitled "Model Validation in the Urban, Terrestrial, and Aquatic Environments" and a technical consultants meeting to help formulate plans for the IAEA to continue studies similar to the BIOMOVS effort. Dr. Bartell was invited to Gesellschaft fuer Strahlen-und-Umweltforschung (GSF) in Neuherberg, Federal Republic of Germany, and to Fraunhofer Institut in Schmallenberg, Federal Republic of Germany to present seminars on research concerning current issues in ecological risk analysis.

37662 (PNL–6913) **Calculated and measured depth dose profiles in a phantom exposed to neutron radiation fields.** Scherpelz, R.I.; Tanner, J.E.; Sigalla, L.A.; Hadlock, D.E. Pacific Northwest Lab., Richland, WA (USA). May 1989. 57p. Sponsored by DOE Environment Health & Safety. DOE Contract AC06-76RL01830. Order Number DE89013873/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

An accurate evaluation of doses caused by external sources of neutron radiation depends on knowledge of the transport of radiation inside the human body. Health physicists use two primary methods for studying this radiation transport: computer calculations and measurements. Both computer calculations and measurements were performed under well controlled, nearly identical conditions to determine the extent of their agreement. A comparison of the dose profiles predicted by both measurements and calculations was thus possible. The measurements were performed in a cylindrical phantom made of tissue equivalent plastic. The phantom size, 61 cm high and 30 cm in diameter, was chosen to approximate the human torso and to match the dimensions of cylindrical phantoms used by previous calculations. Holes were drilled down through the phantom to accommodate small tissue equivalent proportional counters (TEPCs) at various depths in the phantom. These counters were used to measure the neutron dose inside the phantom when it was exposed to various sources of neutrons. The holes in the phantom could also accommodate miniature Geiger-Mueller detectors to measure the gamma component of the dose. Neutron and gamma dose profiles were measured for two different sources of neutrons: an unmoderated ^{252}Cf source and a 733-keV neutron beam generated by a Van de Graaff accelerator. 14 refs., 13 figs., 11 tabs.

37663 (PNL-SA–16298) **Radial distributions of energy deposited along charged particle tracks.** Toburen, L.H.; Braby, L.A.; Metting, N.F.; Kraft, G.; Kraske, F.; Schmidt-Boecking, H.; Doerner, R.; Seip, R. Pacific Northwest Lab., Richland, WA (USA). Mar 1989. 13p. Sponsored by DOE Energy Research. DOE Contract AC06-76RL01830. (CONF-890517–4: 10. symposium on microdosimetry, Rome, Italy, 21-26 May 1989). Order Number DE89014448/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Distributions of the specific energy deposited in micron sized volumes have been measured as a function of the radial distance from the path of 5.9-Mev uranium and 13.0- to 17.2-Mev/amu germanium beams. Tissue volumes of 125, 250, 500 and 1000nm diameter were simulated using a wire walled proportional counter capable of 2-dimensional motion relative to the ion beam. Radial distances from 0 to 8000nm were investigated. Values of the mean specific energy were obtained from these distributions and compared to radial dose profiles calculated from track structure models. Excellent agreement is observed between the measured mean specific energy and the calculated radial dose for small distances relative to the track path. 17 refs., 6 figs.

37664 (DOE/ER/45131–7) **The physics of pattern formation at liquid interface: Progress report, June 1, 1988–May 31, 1989.** Maher, J.V. Pittsburgh Univ., PA (USA). Jun 1989. 11p. Sponsored by DOE Energy Research. DOE Contract FG02-84ER45131. Order Number DE89014527/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This paper describes pattern formation at liquid interfaces. Results shed light on questions which underlie the theory of solidification. Also reviewed are random system issues of wetting of curved surfaces and fluctuations in swollen polymeric gel.

37665 **Molecular statics studies of grain boundaries: structure and energy of (001) twist boundaries.** Vitek, V. (Univ. of Pennsylvania, Philadelphia (USA)). pp. 16 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). DOE Contract FG02-84ER45129. (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

While structures and energies of tilt boundaries studied atomistically conform to the common wisdom and, in general, agree with experimental observations, the results of atomistic studies of twist boundaries often appear not to do so. In particular, experimentally well established presence of grain boundary dislocations in (001) twist boundaries [43-47] has not been confirmed by most atomistic calculations [48-50] and results of the X-ray diffraction studies of the structure of the $\Sigma = 5$ boundary disagree with its atomistically calculated structure [48-50]. In this paper they first present calculations of the structures and energies of very long period low coincidence

boundaries the results of which show both localized dislocations and well defined energy cusps. The reasons for previously encountered problems as well as for the unconventional shape of the cusps, are then analyzed. The structure of the $\Sigma = 5$ boundary is then discussed in terms of the structural multiplicity which was proposed to explain the discrepancies with X-ray diffraction data [30]. It is shown here that the possible multiplicity of structures of the $\Sigma = 5$ boundary is even more extensive than previously anticipated and molecular dynamics studies are needed to reveal structures which can be meaningfully compared with experiments.

37666 Pair potential approach for interfaces: fundamental problems and practical solutions. Maggs, A.C. (Cornell Univ., Ithaca, NY (USA)); Ashcroft, N.W. pp. 8 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

A fundamental problem in the use of a central pair-force model for defect problems is that it omits three-body and higher terms which are necessarily present in real systems. Electronic fluctuation effects are also usually omitted. While these can be small in the simple metals, they are significant in noble and transition metals, as shown by a simple real space argument. To gauge the importance of their effects in interface problems, the structure of a simple $\Sigma 5$ twist boundary is examined, with the atoms described by both pair- and three-center interactions and as a function of the relative strength of the two.

37667 Extended CSL-model for grain boundary in layer structures. Kitano, Y. (Hiroshima Univ. (Japan)); Takata, M.; Komura, Y. pp. 6 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

The extended CSL-model is applied to structure analysis of boundaries which are observed in high resolution electron microscope (HREM) images between two crystals with two different layer structures. An HREM image for the twist boundary is presented and the CSL-pattern which is predicted by this extension is confirmed. A modification of the Σ-values due to this extension is discussed.

37668 Present limitations on the lattice imaging of grain boundaries. Mader, W. (Max-Planck-Institut fuer Metallforschung, Stuttgart (West Germany)); Necker, G.; Balluffi, R.W. pp. 6 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). DOE Contract FG02-84ER45116. (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

Limitations which currently exist on using the electron microscope lattice imaging technique to obtain information about grain boundary structure are considered. Boundaries are only amenable when the adjoining crystals are oriented so that they produce projected patterns of resolved atomic columns or atomic planes. The conditions under which information can then be obtained about the atomistic core structure, the boundary translational state and the presence of localized grain boundary dislocations are described. In a number of instances, ultra-thin bicrystals are required which are so thin that great difficulties will be encountered with utilizing them on a practical basis.

37669 Theory of phase transitions at internal interfaces. Rottman, C. (National Bureau of Standards, Gaithersburg, MD (USA)). pp. 14 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

A variety of phase transitions are possible at internal interfaces. The author will systematically describe from a pedagogical point of view the various classes of phase transitions which are possible. Experiments which have been performed will be mentioned at the appropriate places. Theories which predict these phase transitions and which explain the behavior associated with the transition are emphasized. Possibilities for phase diagrams are suggested. Wetting and melting of internal interfaces will also be discussed.

37670 Grain boundary structure and phase transformations: a critical review of computer simulation studies and comparison with experiments. Pontikis, V. (Centre d'Etudes Nucleaires de Saclay, Gif-sur-Yvette (France)). pp. 10 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

The author presents a review of available computer simulation results on the structure and thermodynamical properties of grain boundaries at temperatures $T > 0.4\ T_{melting}$. The author discusses the possible existence of premelting effects in internal interfaces by comparing the results with the predictions of phenomenological theories of melting and, by analogy, with recent experimental results on surface melting. Experiments on possible premelting effects in grain boundaries indicate that melting of internal interfaces, in the sense of the formation of a macroscopic thick liquid layer inside the boundary, should occur in pure systems only near to the bulk melting point. These computer simulation studies which led to a different conclusion are examined in detail. Large scale computer simulations, additional theoretical work and more precise experiments are needed to clarify this point.

37671 Two dimensional phase equilibria at surfaces. Blakely, J.M. (Cornell Univ., Ithaca, NY (USA)). pp. 16 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

This paper provides a brief discussion of some current experimental work on phase transitions at free surfaces. Examples are used to illustrate work in the areas of surface reconstruction, roughening, atomic step coalescence, and transformations of adsorbed and segregated layers. All of these surface phenomena are likely to have counterparts at internal boundaries.

37672 Molecular dynamics study of high-temperature grain-boundary stability in a (100) $\Sigma = 29$ bicrystal model. Nguyen, T. (Argonne National Lab., IL (USA)); Yip, S.; Wolf, D. pp. 6 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). DOE Contract W-31-109-ENG-38. (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

A new molecular dynamics program for the investigation of planar bicrystalline interfaces at high temperature and finite external stress has been developed. The constant-stress (Parrinello-Rahman) method is combined with a Region I-Region II treatment of the borders, thus avoiding (i) 3d-periodic border conditions (and therefore the presence of two interfaces in the computational unit cell) and (ii) unphysical constraints arising from fixed borders. The usefulness of this new semi-periodic border treatment is illustrated in an investigation of the high-temperature stability and structure of the $\Sigma = 29$ (100) twist grain boundary.

37673 Mobility of dislocations in grain boundaries. Grabski, M.W. (Warsaw Univ. of Technology (Poland)). pp. 10 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

The mobility of grain boundary (GB) dislocations is discussed in terms of the dissociation of lattice dislocations into extrinsic GB dislocations and subsequent spreading of the dissociation products along the boundary plane. The kinetics of spreading is analyzed and compared with the experimental evidence. It is shown that the motion of EGBDs is controlled by the GB diffusion and is a definite, characteristic property of an individual interface. The new experimental results related to the dependence of spreading kinetics on a GB structure and chemical composition are analyzed both from the point of view of its influence on the GB processes and of its utilization for the determination of the distribution function of GB character.

Activation of the spreading process is responsible for many GB dependent phenomena of engineering importance, especially in the range of intermediate temperatures. The possible ways of exploiting the data concerning spreading in the design of GBs are shown.

37674 Grain boundary design for desirable mechanical properties. Watanabe, T. (Tohoku Univ., Sendai (Japan)). pp. 14 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

Grain boundary design for desirable mechanical properties of polycrystalline materials is discussed on the basis of the intrinsic structure-dependent mechanical properties, particularly deformation and fracture of grain boundaries. The importance of the grain boundary character distribution (GBCD) is emphasized which is a new microstructural parameter controlling the properties of polycrystals. The results of recent studies of GBCD are presented. The potential for grain boundary design for strong and ductile polycrystals through the control of GBCD and boundary inclination is discussed.

37675 Interface crack models. Suga, T. (Max-Planck-Institut fuer Metallforschung, Stuttgart (West Germany)); Schmauder, S.; Elssner, G. pp. 7 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

The continuum models for an interface crack are reviewed. The logical inconsistencies present in the local stress field of the conventional model, such as the oscillatory singularities and the interpenetration of the crack surfaces, are removed by modifying the boundary conditions at the crack tip. An interpretation of the crack tip models is given and discussed with respect to inelastic energy dissipation during interfacial failure of heterogeneous materials.

37676 Controlling embrittlement at grain boundaries in intermetallic compounds. Takasugi, T. (Tohoku Univ., Sendai (Japan)). pp. 12 of Interface science and engineering '87. Les Editions de Physique, Les Ulis Cedex, France (1988). (CONF-870793–: Interface science and engineering '87: international conference on the structure and properties of internal interfaces, Lake Placid, New York, USA, 13-16 Jul 1987).

The present paper first presents some characteristics of structure and electronic (bond) nature for the grain boundary brittleness of the intermetallic compounds. Next, the phenomenological aspects for the grain boundary brittleness of the $L1_2$-type intermetallic compounds are reviewed with respect to the combination of the constituent atoms, the alloying effect, the stoichiometry effect, and the role of impurity or gaseous atoms. It is emphasized that the brittleness of grain boundaries in the intermetallic compounds are intimately related to the atomistic and electronic structures at grain boundary regions. Based on these systematic observations, it is suggested that the brittleness of the $L1_2$-type intermetallic compounds can be manipulated by appropriate control of composition and the corresponding electrochemical bond environment at grain boundary planes, and by control of the test environment. Finally, some instances pointing to the materials development are described.

Kratkie soobshcheniya po fizike.; no. 8.

Cathodoluminescence characteristics of the $ZnS_{1-x}Te_x$ solid solution depending on the temperature of crystal annealing are investigated. Experimental data obtained are interpreted on the basis of cluster representation about the distribution of solid solution components. 5 refs.; 1 fig.; 1 tab.

37682 (IPNO-DRE–88-09) **Multiple angular scattering of heavy ions $^{16-17}O$, ^{40}Ar, ^{86}Kr, ^{100}Mo at intermediate energies (20-90 MeV/u).** Anne, R.; Bastin, G. Paris-11 Univ., 91 - Orsay; Centre de Spectrometrie Nucleaire et de Spectrometrie de Masse); Hubert, F.; Herault, J.; Bimbot, R.; Gauvin, H. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1988. 46p. Order Number DE89789221/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

An original experimental method has been developed using the LISE magnetic spectrometer at the GANIL accelerator for measuring the angular distributions of heavy ions at the exit of targets. Multiple angular scattering of heavy ions $^{16-17}O$, ^{40}Ar, ^{86}Kr, ^{100}Mo in solid and gaseous media have thus been measured in the energy range 20-90 MeV/u. With these different projectile-target systems and incident energies the Born parameter α_B takes values in a wide range (0.5 to 100). The experimental results hae thus been compared to multiple scattering theories based on classical or quantum mechanical calculations. As far as the classical theory is concerned an "universal" relation links the reduced straggling angle $\alpha_{1/2}$ and

the reduced thickness tau introduced by Meyer according to the expression $\alpha_{1/2} = 1.00\ tau^{0.55}$. In the framework of the quantal Moliere theory a good agreement is found with experiment when α_B is approximately unity. Increasing deviations are observed when this parameter increases up to 100.

37685 (LA-UR–89-1462) **Modeling of non-structural contribution to the pattern.** Von Dreele, R.B. Los Alamos National Lab., NM (USA). 1989. 15p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-890771–2: American Crystallographic Association annual meeting, Seattle, Washington, USA, 23-29 Jul 1989). Order Number DE89011164/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The Rietveld refinement technique requires that sensible models be chosen for both the Bragg reflection profiles and intensities as well as the background contribution. The reflection profiles contain an instrumental part and a sample dependent part that is affected by particle size and strain. The intensities are affected by geometric factors peculiar to the diffraction method and sample dependent effects such as absorption, extinction and preferred orientation. The various functions used for these effects in Rietveld refinement will be discussed along with the possible interpretation of their coefficients. 19 refs., 3 figs.

37686 (LA-UR–89-1967) **Foil implosion studies on PEGASUS.** Cochrane, J.C.; Bartsch, R.R.; Begay, F.; Kruse, H.W.; Oona, H.; Parker, J.V.; Turchi, P.J. Los Alamos National Lab., NM (USA). 1989. 3p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890665–28: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, CA, USA, 12-14 Jun 1989). Order Number DE89014255/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

PEGASUS is a 1.5 MJ capacitor bank facility used in the Los Alamos Trailmaster foil implosion program. The experiments on this facility are to serve as a diagnostic testbed and foil physics benchmark for foil implosions with explosive generators as drivers. During the first year of operation, foil implosions have been driven by discharging the bank directly into a very thin Aluminum 2500 Å thick free-standing foil without any pulse sharpening techniques; so-called "direct drive."These direct drive experiments have served as initial tests to optimize bank performance and foil implosion experimental techniques. The results to date are presented below. 1 ref., 2 figs.

37687 (LA-UR–89-2162) **Competing interactions and complexity in condensed matter.** Bishop, A.R. Los Alamos National Lab., NM (USA). 1989. 39p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-8903141–1: NATO ISI partially integrable systems, Les Houches, France, Mar 1989). Order Number DE89014285/JAW. Available from NTIS, PC A03/MF A01 - OSTI.

Some major themes of space-time complexity in condensed matter contexts are reviewed. They are illustrated through model and physical systems, analysed by both analytical and numerical techniques. 40 refs., 13 figs.

37688 (MLM–3951(OP)) **An Auger sputter profiling study of nitrogen and oxygen ion implantation in two titanium alloys.** Barton, B.D.; Pope, L.E.; Wittberg, T.N. EG and G Mound Applied Technologies, Miamisburg, OH (USA). 1989. 33p. Sponsored by DOE Defense Programs. DOE Contract AC04-88DP43495. (CONF-8905167–1: 11. symposium on applied surface analysis, Cleveland, Ohio, USA, 31 May - 2 jun 1989). Order Number DE89014734/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Samples of two titanium alloys, Ti-6Al-4V and Ti-15V-3Cr-3Sn-3Al, were ion implanted with a combination of nitrogen (N+) and oxygen (O+). For each alloy, implantation parameters were chosen to give implanted nitrogen concentrations of approximately 10 or 50 atomic percent, from a depth of 100 nanometers to a depth of 400 nanometers. In all but one case, dual energy (200 keV and 90 keV) implantations of nitrogen were used to give a relatively uniform nitrogen concentration to a depth of 300 nanometers. In each case, oxygen was implanted at 35 keV, following the nitrogen implantation, to give an oxygen-enriched region near the surface. The implanted samples were then examined by Auger electron spectroscopy (AES) combined with argon ion sputtering. In order to determine the stoichiometry of the nitrogen implanted regions, it was necessary to determine the N(KVV) contribution to the overlapping N(KVV) and Ti(LMM) Auger transitions. It was also necessary to correct for the ion-bombardment-induced compositional changes which have been described in an earlier study titanium nitride thin films. The corrected AES depth profiles were in good agreement with theoretical predictions. 18 refs., 6 figs., 2 tabs.

37689 (SAND–89-0542C) **Phonon-drag thermoelectric power in high magnetic fields in heterojunctions.** Lyo, S.K. Sandia National Labs., Albuquerque, NM (USA). 1989. 7p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890746–1: 4. international conference on modulated semiconductor structures, Ann Arbor, MI, USA, 17-21 Jul 1989). Order Number DE89013921/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A theory is presented for the low-temperature (T) phonon-drag thermopower S_{xx} in a semiconductor heterojunction in a strong magnetic field. Gigantic quantum oscillations (much larger than electron-diffusion contributions) are obtained. When the Landau-level width is larger than k_BT, the one-phonon intra-Landau-level absorption and emission processes are dominant. In the opposite limit, the two-phonon Raman processes give major contributions. The temperature and field dependences of S_{xx} agree reasonably with recent data in $GaAs/Al_xGa_{1-x}As$ heterojunctions. Effects of localized states on S_{xx} are discussed. 14 refs., 3 figs.

37690 (SAND–89-1346C) **Scattering from fractals.** Hurd, A.J. Sandia National Labs., Albuquerque, NM (USA). 1989. 7p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890791–1: NSF workshop on future directions in electromagnetics research, Boston, MA, USA, 25-27 Jul 1989). Order Number DE89013451/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The realization that structures in Nature often can be described by Mandelbrot's "fractals" has led to a revolution in many areas of physics. The interaction of waves with fractal systems has, understandably, become intensely studied since scattering is the method of choice to probe delicate fractal structures such as chainlike particle aggregates. Not all of these waves are electromagnetic: neutron scattering, for example, is an important complementary tool to structural studies by x-ray and light scattering. Since the phenomenology of small-angle neutron scattering (SANS), as it is applied to fractal systems, is identical to that of small-angle x-ray scattering (SAXS), it falls within the scope of this Working Paper. 9 refs.

37691 Fragmentation and structure of silicon microclusters. Feuston, B.P. (Argonne National Lab., IL (USA)); Kalia, R.K.; Vashishta, P. pp. 14 of Condensed matter theories. Volume 2. Vashishta, P.; Kalia, R.K.; Bishop, R.F. (eds.) Plenum Press, New York, NY (1987). (CONF-860789–: 10. international workshop on condensed matter theories, Argonne, Illinois, USA, 21-26 Jul 1986).

It may be possible to determine the magic numbers and fragmentation spectra from the ground-state binding energies and structure, but the relationship between the lowest-energy zero-temperature configurations and the energetics of finite-temperature microclusters is not obvious. Recall fragmentation of Si clusters occurs at temperatures the order of the melting temperature ($T \approx 2000$ K). What is needed, a first-principles finite-temperature calculation, allowing the determination of all possible structures, their corresponding binding energies, and fragmentation spectra, is not presently possible. However, a molecular dynamics calculation does allow one to study the nature of fragmentation in addition to determination of the global ground-state structure and all mechanically stable configurations underlying the finite-temperature cluster, once given an interaction potential. The authors present results for such a calculation for Si_{2-14} using the Stillinger-Weber 3-body potential. Their results indicate that the existence of magic numbers is determined by the topology and energetics of high-energy bound structures rather than the structure and ground-state energies at zero temperature.

37692 Computer simulation of special grain boundaries in metals and ionic materials. Wolf, D. (Argonne National Lab., IL (USA)). pp. 8 of Condensed matter theories. Volume 2. Vashishta, P.; Kalia, R.K.; Bishop, R.F. (eds.) Plenum Press, New York, NY (1987). DOE Contract W-31-109-ENG-38. (CONF-860789–: 10. international workshop on condensed matter theories, Argonne, Illinois, USA, 21-26 Jul 1986).

In recent years a set of lattice statics computer codes has been developed which permits one to determine the energies, structures, and point-defect properties of grain boundaries in metals and predominantly ionic ceramic materials. In contrast to metals, long-range Coulomb forces between the ions have to be considered in ionic bicrystals. The selection criteria for the identification of special (i.e., low-energy) grain boundaries (GBs) is discussed with particular emphasis on (a) the role of the GB plane, (b) the influence of the planar unit-cell area, and (c) the effect of the interatomic potential on the predicted energies and structures of GBs in metals and ionic materials.

37693 Density functional theory and f electron systems. Norman, M.R. (Argonne National Lab., IL (USA)). pp. 8 of Condensed matter theories. Volume 2. Vashishta, P.; Kalia, R.K.; Bishop, R.F. (eds.) Plenum Press, New York, NY (1987). DOE Contract W-31-109-ENG-38. (CONF-860789–: 10. international workshop on condensed matter theories, Argonne, Illinois, USA, 21-26 Jul 1986).

Density functional theory within the local density approximation has proven to be an extremely successful way to elucidate the electronic structure and ground state properties of a wide variety of electronic systems. Because of the discovery of exotic behavior in f electron systems such as the mixed valent effect and heavy fermion phenomenon, the applicability of the above theory has been questioned. Recently, dramatic progress has been made in determining more exact density functionals which have been extensively tested in atomic systems. The purpose of this paper is to speculate what impact these new methods will have on the f electron question. In the first section, a brief review of density functional theory and the local density approximation (LDA) is given, as well as an equally brief review of results on f electron solids. In the second section, the new density functional techniques are discussed and results for atoms reviewed, and potential extension of these methods to the case of the lattice, with emphasis on f electron solids is presented.

37694 Electron localization in one-dimensional incommensurate potentials. Luban, M. (Iowa State Univ., Ames (USA)). pp. 10 of Condensed matter theories. Volume 2. Vashishta, P.; Kalia, R.K.; Bishop, R.F. (eds.) Plenum Press, New York, NY (1987). DOE Contract W-7405-ENG-82. (CONF-860789–: 10. international workshop on condensed matter theories, Argonne, Illinois, USA, 21-26 Jul 1986).

A one-dimensional potential V(x) consisting of two periodic components whose periods are incommensurate can give rise to localized electron states. Conventional numerical methods to calculate the localized eigen-states, either of the Schrodinger equation or the tight-binding models (TBM), are plagued by a numerical instability originating in a second solution which diverges for {vert ba} x {vert ba} $\rightarrow \infty$. The authors present a practical numerical algorithm for an arbitrary TBM which is free of this difficulty and which provides the localized eigenstates and their energies to ultra-high precision. The underlying method incorporates a generalization of a classic theorem of Pincherele for the existence of minimal solutions to three-term recurrence relations. They present numerical results for the Aubry model for $\Delta > 1$, where $\Delta = V_I / (2V_H)$ is a dimensionless coupling constant, V_I is the strength of the incommensurate component of the one-electron potential and V_H is the nearest-neighbor hopping matrix element. They propose that the well-known transition from localized to extended eigenstates which occurs as Δ is reduced towards unity is accompanied by an incipient infinite degeneracy of the localized states. Their numerical results for the energy difference of any pair of nearly-degenerate localized states is well described by a power law, $(\Delta\text{-}1)^Y$, but with a non-universal exponent Y.

37695 Transport in metal alloys and resistivity saturation. Swihart, J.C. (Indiana Univ., Bloomington (USA)); Butler, W.H. pp. 12 of Condensed matter theories. Volume 2. Vashishta, P.; Kalia, R.K.; Bishop, R.F. (eds.) Plenum Press, New York, NY (1987). DOE Contract AC05-84OR21400. (CONF-860789–: 10. international workshop on condensed matter theories, Argonne, Illinois, USA, 21-26 Jul 1986).

The authors consider two problems in the electrical resistivity of metals and alloys. These consist of the residual resistivity of random substitutional alloys as a function of composition and the phenomenon of resistivity saturation in metals and alloys. They present a unified treatment that covers both phenomena with one model. This model was first presented by Butler and is based on the Korringa-Kohn-Rostocker band structure method blended with the Coherent-Potential-Approximation.

37696 What underlies the Anderson Hamiltonian?. Koelling, D.D. (Argonne National Lab., IL (USA)). pp. 10 of Condensed matter theories. Volume 2. Vashishta, P.; Kalia, R.K.; Bishop, R.F. (eds.) Plenum Press, New York, NY (1987). DOE Contract W-31-109-ENG-38. (CONF-860789–: 10. international workshop on condensed matter theories, Argonne, Illinois, USA, 21-26 Jul 1986).

The Anderson Hamiltonian characterizes a model in which local orbitals interact with each other through Coulomb interactions and with a bath of itinerant states through hybridization. It has been utilized with considerable success to discuss phenomena ranging from the Kondo problem to the occurrence of two peaks in the photoemission spectra of Ce compounds. Normally, it is studied by examining the content of its solutions. Of comparable significance, however, is the determination of the various parameters of the model. In trying to find a prescription for the parameters of the model, one simultaneously develops some understanding of the states involved and studies whether the model incorporates enough of the essential physics. One useful tactic is to compare this model with other models and ask how different effects are accommodated. The author compares results from the model with atomic, band, and modified band calculations for f-electron materials.

37697 Binding energy of large icosahedral and cuboctahedral Lennard-Jones clusters. Northby, J.A. (Rhode Island Univ., Kingston (USA). Dept. of Physics); Xie, J.; Freeman, D.L.; Doll, J.D. *Zeitschrift fuer Physik D: Atoms, Molecules and Clusters (F.R. Germany)*, 12(1-4): 69-71 (Jun 1989). (CONF-8807155–: 4. international symposium on small particles and inorganic clusters (ISSPIC-4), Aix-en-Province, France, 5-9 Jul 1988).

It is widely believed that the lowest energy configurations for small rare gas clusters have icosahedral symmetry. This contrasts with the bulk crystal structures which have cuboctahedral fcc symmetry. It is of interest to understand the transition between this finite and bulk behavior. To model this transition in rare gas clusters we have undertaken optimization studies within the Lennard-Jones pair potential model. Using a combination of Monte Carlo and Partan Search optimization methods, the lowest energy relaxed structures of Lennard-Jones clusters having icosahedral and cuboctahedral

symmetry were found. Studies were performed for complete shell clusters ranging in size from one shell having 13 atoms to 14 shells having 10,179 atoms. It was found that the icosahedral structures are lower in energy than the cuboctahedral structures for cluster sizes having 13 shells or fewer. Additional studies were performed using the more accurate Aziz-Chen [HFD-C] pair potential parameterized for argon. The conclusions appear to be relatively insensitive to the form of the potential.

37698 (SAND–89-1496C) **Formation, motion and high temperature superconductivity of large bipolarons.** Emin, D. Sandia National Labs., Albuquerque, NM (USA). 1989. 6p. Sponsored by DOE Energy Research. DOE Contract AC04-76DP00789. (CONF-890718–1: International conference on materials and mechanisms of superconductivity - high-temperature superconductors, Stanford, California, USA, 23-28 Jul 1989). Order Number DE89014630/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Bipolaronic superconductivity requires two exceptional circumstances. First, at least some charge carriers must form bipolarons. Second, these bipolarons must be mobile (move coherently). However, beyond quasi-one-dimensional electronic systems, bipolarons have heretofore always been found to be "small." Small (bi)polarons are very compact (bi)polarons that localize rather than move coherently. Thus, small bipolarons are not suitable carriers for bipolaronic superconductivity. However, in analogy with the case of large polarons, less compact bipolarons, "large" bipolarons, are expected to be mobile. These observations lead one to ask if and when large bipolarons can form in multi-dimensional electronic systems. Here the results of studies of the formation, motion and superconductivity of large bipolarons are summarized. 5 refs.

37699 (IC–88/392) **Local structure of a 2-codimensional conformally flat submanifold in an Euclidean space R^{n+2}.** Zafindratafa, G. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 27p. Order Number DE89618379/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Since 1917, many mathematicians studied conformally flat submanifolds. In 1917, E. Cartan showed that the second fundamental form of a conformally flat hypersurface of R^{n+1} admits an eigenvalue of multiplicity $\geq$ n-1. In 1972, B.Y. Chen introduced the notion of quasiumbilical submanifold. A submanifold M of codimension N in R^{n+N} is quasiumbilical if and only if there exists, locally at each point of M, an orthonormal frame field $(\xi_1,...,\xi_N)$ of the normal space so that the Weingarten tensor of each ξ_α possesses an eigenvalue of multiplicity $\geq$ n-1. The purpose of this work is to resolve the following problem: Is there any equivalent definition of quasiumbilicity which does not use either any local frame field on the normal bundle or any particular sections on the tangent bundle? B.Y. Chen and K. Yano proved in 1972 that a quasiumbilical submanifold of codimension $N \geq 1$ in R^{n+N} is conformally flat; moreover in the case of codimension N=1, the notion of quasiumbilicity is equivalent to the conformal flatness. J.D. Moore and J.M. Morvan improved this last equivalence in 1978 by proving that, if $1 \leq N \leq \inf(4,n-3)$, a N-codimensional submanifold of R^{n+N} is conformally flat if and only if it is quasiumbilical. But two years before, B.Y. Chen and L. Verstraelen demonstrated that any N-codimensional conformally flat submanifold of R^{n+N} ($1 \leq N \leq n-3$) with a null normal curvature is quasiumbilical. In 1985, M. do Carmo and his coworkers determined the local geometry of a conformally flat hypersurface of R^{n+1}. The purpose of this work is to generalize M. do Carmo's result.

37700 (IC–88/398) **Compactifications of the eleven-dimensional supermembrane.** Bergshoeff, E.; Duff, M.J.; Pope, C.N.; Sezgin, E. International Centre for Theoretical Physics, Trieste (Italy). Dec 1988. 13p. (CTP-TAMU–76/8). Order Number DE89611965/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

We construct new vacua for the eleven-dimensional supermembrane in which spacetime is the product of four-dimensional anti-de Sitter space and a compact seven-dimensional Einstein space, and the membrane is a sphere of non-zero radius in the anti-de Sitter space. In one class of solution the radius is a specific multiple of the anti-de Sitter scale parameter while in a second class the radius is arbitrary. Remarkably, only two of the Freund-Rubin compactifications admit vacua of the latter class: the round seven-sphere with N=8 supersymmetry and the N(0,1) space with N=3 supersymmetry. (author). 27 refs.

37701 (INIS-mf–11440, pp. 217) **Minuscule weights and Kronecker products.** Iosifescu, M. (Central Inst. of Physics, Bucharest (Romania). Inst. of Physics and Nuclear Engineering); Scutaru, H. Solutions of the non-linear Schroedinger equation (NSE) for the Bose gas with two- and three-particle interaction are considered. Problems of soliton-like bubble existence, stability and evolution of the moving soliton are studied. It is shown that at D=2.3 for low-amplitude waves propagating at the transonic velocity the NSE is reduced to a two- and three-dimensional Kadomtsev-Petviashvili (KP) equation and the NSE bubble soliton transfers to the KP one. 9 refs.; 2 figs.

The report deals with Markovian semi-group dynamics of an open system of a large number of quantum particles of different types which interact between each other and with thermostat. It is shown how to obtain nonlinear one-particle kinetic equations under assumption of weak interaction and a large number of particles in mean field approximation. 8 refs.

37705 (JINR-R–4-88-532) **Adiabatic representation of scattering problem in three-body quantum system.** Vinitskij, S.I.; Dubovik, V.M.; Markovskij, B.L.; Kadomtsev, M.B.; Suz'ko, A.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1988. 18p. (In Russian). Order Number DE89618406/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

Submitted to J. Phys., G.

In the configuration space of the three charged bodies relative motion new adiabatic representation of the wave function (psi(X)) is suggested in terms of the local adiabatic expansion of the Faddeev components. Using this representation an adiabatic formulation of the multichannel three-particle-scattering problem for bounded and fastly decreasing pair potentials is correctly performed. 12 refs.; 2 figs.

37706 (LAL–88-33) **Study of atmospheric neutrino interactions with the Frejus detector.** Longuemare, C.; Frejus Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Jun 1988. 11p. (CONF-8804184–: 9. workshop on grand unification, Aix-Les-Bains, France, 27-30 Apr 1988). Order Number DE89776425/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A detailed analysis of the 165 neutrino events collected in the Frejus detector during three years of running is presented. This sample, which corresponds to a 1.3 kt.year sensitivity, is compared to the predictions of a neutrino Monte Carlo simulation program based on a calculated atmospheric neutrino flux. The agreement is satisfactory at the present statistical level.

37707 (LAL–88-34) **Results of the Frejus experiment on nucleon decay.** Bourdarios, G.; Frejus Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Jun 1988. 8p. (CONF-8804184–: 9. workshop on grand unification, Aix-Les-Bains, France, 27-30 Apr 1988). Order Number DE89776421/JAW. Available from NTIS (US Sales Only), PC A02/MF A01.

The Frejus detector has reached an integrated fiducial sensitivity of 1.4 kt.year. The data provide no evidence for nucleon decay, the number of selected events being consistent with the expected background due to atmospheric neutrino interactions. The lower lifetime limits obtained range from 0.9 10^{31} to 2.9 10^{31} years for the modes with a missing anti-neutrino in the final state, and from 0.8 10^{31} to 5.1 10^{31} years for the modes with one charged lepton in the final state.

37708 (LA-UR–89-1745) **Quantum mechanical stabilization of Minkowski signature wormholes.** Visser, M. Los Alamos National Lab., NM (USA). 19 May 1989. 10p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8905153–1: WORMSHOP '89, Batavia, Illinois, USA, 11-13 May 1989). Order Number DE89013436/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

When one attempts to construct classical wormholes in Minkowski signature Lorentzian spacetimes violations of both the weak energy hypothesis and averaged weak energy hypothesis are encountered. Since the weak energy hypothesis is experimentally known to be violated quantum mechanically, this suggests that a quantum mechanical analysis of Minkowski signature wormholes is in order. In this note I perform a minisuperspace analysis of a simple class of Minkowski signature wormholes. By solving the Wheeler-de Witt equation for pure Einstein gravity on this minisuperspace the quantum mechanical wave function of the wormhole is obtained in closed form. The wormhole is shown to be quantum mechanically stabilized with an average radius of order the Planck length. 8 refs.

37709 (LBL–25609) **Canonical integration and analysis of periodic maps using non-standard analysis and lie methods.** Forest, E.; Berz, M. Lawrence Berkeley Lab., CA (USA). Jun 1988. 22p. Sponsored by DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-8807177–1: 2. workshop on LIE methods in optics, Morelos, Mexico, 19-22 Jul 1988;ESG–46). Order Number DE89013369/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

We describe a method and a way of thinking which is ideally suited for the study of systems represented by canonical integrators. Starting with the continuous description provided by the Hamiltonians, we replace it by a succession of preferably canonical maps. The power series representation of these maps can be extracted with a computer implementation of the tools of Non-Standard Analysis and analyzed by the same tools. For a nearly integrable system, we can define a Floquet ring in a way consistent with our needs. Using the finite time maps, the Floquet ring is defined only at the locations s_i where one perturbs or observes the phase space. At most the total number of locations is equal to the total number of steps of our integrator. We can also produce pseudo-Hamiltonians which describe the motion induced by these maps. 15 refs., 1 fig.

37710 (SFB–237-46(prepr.)) **Klein's paradox and the relativistic point interaction.** Seba, P. Bochum Univ. (Germany, F.R.). Sonderforschungsbereich 237 - Unordnung und Grosse Fluktuationen; Bielefeld Univ. (Germany, F.R.). Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS); Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. Mar 1989. 20p. Available from Bochum Univ. (Germany, F.R.). Sonderforschungsbereich 237 - Unordnung und Grosse Fluktuationen.

We discuss a short-range approximation to relativistic delta-function potentials.

37711 **Wormholes and the cosmological constant.** Klebanov, I. (Stanford Linear Accelerator Center, CA (USA)); Susskind, L.; Banks, T. *Nuclear Physics [Section] B (Netherlands)*, 317(3): 665-692 (8 May 1989). DOE Contract AC03-76SF00515.

We review Coleman's wormhole mechanism for the vanishing of the cosmological constant. We show that in a minisuperspace model wormhole-connected universes dominate the path integral. We also provide evidence that the euclidean path integral over geometries with spherical topology is unstable with respect to formation of infinitely many wormhole-connected 4-spheres. Consistency is restored by summing over all topologies, which leads to Coleman's result. Coleman's argument for determination of other parameters is reviewed and applied to the mass of the pion. A discouraging result is found that the pion mass is driven to zero. We also consider qualitatively the implications of the wormhole theory for cosmology. We argue that a small number of universes containing matter and energy may exist in contact with infinitely many cold and empty universes. Contact with the cold universes insures that the cosmological constant in the warm ones is zero.

37713 (AD-A–204903/9/XAB) **Magnetohydrodynamic clump instability.** Tetreault, D.J. Massachusetts Inst. of Tech., Cambridge, MA (USA). Dept. of Nuclear Engineering. Aug 1988. 14p. Available from NTIS, PC A03/MF A01.

Pub. in Physics of Fluids, Vol. 31, No. 8, 2122-2134(Aug 1988).

The theory of magnetohydrodynamic (MHD) clump instability in current-driven plasma is presented. MHD clump fluctuations are current-carrying bundles of correlated magnetic field lines. The instability occurs when turbulent mixing of the mean current density at island overlap produces clumps at a rate faster than their decay as a result of magnetic-field-line stochasticity. The renormalized dynamical equation describing MHD clump instability is derived from one-fluid MHD equations and conserves the dynamical invariants of the exact equations. The renormalized equation is a nonlinear, turbulent version of the Newcomb equation of linear MHD stability theory and can be cast into the form of a nonlinear MHD energy principle. MHD clump instability is a dynamical route to the Taylor state.

37714 (CONF-890403–25) **Transport survey calculations using the spectral collocation method.** Painter, S.L.; Lyon, J.F. Oak Ridge National Lab., TN (USA). 1989. 10p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 7. international stellarator workshop; Oak Ridge, Tennessee, USA; 10-14

Apr 1989. Order Number DE89014090/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

A novel transport survey code has been developed and is being used to study the sensitivity of stellarator reactor performance to various transport assumptions. Instead of following one of the usual approaches, the steady-state transport equation are solved in integral form using the spectral collocation method. This approach effectively combine the computational efficiency of global models with the general nature of 1-D solutions. A compact torsatron reactor test case was used to study the convergence properties and flexibility of the new method. The heat transport model combined Shaing's model for ripple-induced neoclassical transport, the Chang-Hinton model for axisymmetric neoclassical transport, and neoalcator scaling for anomalous electron heat flux. Alpha particle heating, radiation losses, classical electron-ion heat flow, and external heating were included. For the test problem, the method exhibited some remarkable convergence properties. As the number of basis functions was increased, the maximum, pointwise error in the integrated power balance decayed exponentially until the numerical noise level as reached. Better than 10% accuracy in the globally-averaged quantities was achieved with only 5 basis functions; better than 1% accuracy was achieved with 10 basis functions. The numerical method was also found to be very general. Extreme temperature gradients at the plasma edge which sometimes arise from the neoclassical models and are difficult to resolve with finite-difference methods were easily resolved. 8 refs., 6 figs.

37715 (CONF-890403–26) **Alpha-particle losses in compact torsatron reactors.** Painter, S.L.; Lyon, J.F. Oak Ridge National Lab., TN (USA). 1989. 11p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 7. international stellarator workshop; Oak Ridge, TN, USA; 10-14 Apr 1989. Order Number DE89014107/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Loss of alpha particles in compact torsatron reactors is studied. For 6, 9, and 12 field period reactors, the direct loss is a relatively weak function of radius and energy and varies from $\simeq$33% for M = 6 to $\simeq$18% for M = 12. Loss of alpha particles through scattering into the loss region is calculated using the Fokker-Plank equation for fast ions and found to contribute an additional alpha-particle energy loss of $\simeq$15%. The consequences of these relatively large losses for torsatron reactor design are discussed. The relationship between the direct particle losses and the magnetic field structure is also studied. Orbit losses from a variety of stellarator configurations are calculated and a figure-of-merit that characterizes the orbit confinement of a magnetic configuration is deduced from these calculations. This figure-of-merit is used to show how the direct losses might be reduced at low aspect-ratio. Effects of finite beta on the direct particle losses are also addressed, and are shown to significantly increase the direct losses in some configurations. 15 refs., 8 figs.

37716 (CONF-8906148–1) **Panel discussion: Progress and plans for magnetic fusion: Summary of comments on recent progress in fusion research at the Oak Ridge National Laboratory.** Sheffield, J. Oak Ridge National Lab., TN (USA). 1989. 7p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From Fusion Power Associates annual meeting; Washington, DC, USA; 1-2 Jun 1989. Order Number DE89013540/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Progress in fusion research is marked not so much by a few giant steps as by a continual number of small steps, which yield a steady advance toward the goal of producing a fusion reactor. During the past year, there have been two such steps in the Oak Ridge National Laboratory (ORNL) program: the experimental demonstration of access to the second stable region of beta in the Advanced Toroidal Facility (ATF); and the acceleration of a frozen hydrogen pellet by an intense electron beam. This paper discusses these steps.

37717 (EUR-CEA-FC–1342) **Determination of magnetic field direction in tokamaks from laser-induced Lyman-α fluorescence.** Voslamber, D. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. Apr 1988. 127p. Available from NTIS (US Sales Only), PC A07/MF A01.

Resonant laser scattering in the Lyman-α line of hydrogen is investigated as a possible tool for measuring the magnetic field direction in tokamak plasmas. The method is based on the depolarisation-dependence of the scattering process. Limitations arising from depolarising collisions are studied in detail by employing a previously developed theory for the collisional redistribution of light. An error analysis is performed to derive the expected experimental precision under various plasma conditions and for laser energies ranging between 1 micron$J and 10 mJ. This analysis also includes the measurement of neutral hydrogen densities. It is shown that with presently available laser powers application of the method would be restricted to the border regions of the plasma. Application to the central regions would require further developments in laser technology, especially with regard to higher powers at the wavelength of Lyman-α and (or) to fast repetition rates.

37718 (EUR-CEA-FC–1354) **Turbulence and abnormal transport in tokamak plasmas.** Garbet, X. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee; Aix-Marseille-2 Univ., 13 - Marseille (France). Centre Universitaire de Luminy. Sep 1988. 218p. (In French). Available from NTIS (US Sales Only), PC A10/MF A01.

Microinstabilities in linear and nonlinear tokamak plasmas were studied. A variational method based on the existence of a system of angular variables and action for the charged particles in the magnetic configuration of a tokamak is described. The corresponding functional, extremal in relation to the fluctuating electromagnetic field, is calculated analytically, taking into account the effects of the toroidal geometry. A numerical code, TORRID, was derived from these principles and the main instabilities, especially ion instabilities and microtearing, were studied linearly. Nonlinear methods were also applied to microtearing. Quasi-linear transport coefficients are derived from a principle of minimum entropy production. Thermal ionic conductivity and viscosity are calculated for an ionic turbulence.

37719 (EUR-CEA-FC–1356) **Plugging regime in the pump limiter throat.** Ghendrih, P.; Grosman, A.; Samain, A.; Capes, H.; Morera, J.P. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. Aug 1988. 19p. Available from NTIS (US Sales Only), PC A03/MF A01.

The plugging regime -with no outstreaming neutral flux- is studied for a closed configuration pump limiter (throat). We derive the plugging length and the neutral density build-up at the neutralizer plate. The analytical expressions are supported by numerical evidence. We find an improved efficiency related to the throat effect mainly due to neutral-sidewall interactions.

37720 (GTFR–91) **Review of effects of NBI [neutral beam injection] and rotation on plasma transport in tokamaks.** Stacey, W.M. Jr. Georgia Inst. of Tech., Atlanta, GA (USA). Fusion Research Center. Jun 1989. 18p. Sponsored by DOE Energy Research. DOE Contract AS05-78ET52025. Order Number DE89014109/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The experimental and theoretical indications of effects of unbalanced neutral beam injection and plasma rotation on plasma transport in tokamaks are reviewed. 72 refs. (CBS)

Available from NTIS (US Sales Only), PC A04/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 3.

High-temperature plasma confinement in the Yupiter-2M multislit electromagnetic trap during electron injection is investigated. Results of determination of magnetic surface symmetry and adjustment of electrostatic system of magnetic slit locking are given. Profiles of density, electron temperatures, volumetric charge potential are recorded. The volume and area of plasma boundary surface are determined, plasma parameters are measured. In case of electron current of 0.1 A and injection time of 4 ms in the volume of 16l 7.10 ^{15} particles with the density of $4x10^{11}$ cm^{-3} and electron temperature of 13 eV are accumulated. Plasma potential increases with magnetic field increase reaching 300 V in case magnetic field in the circular shit of 10.5 kGs. The character of electron diffusion transfer across magnetic field is studied and the absence of anomalously high loss flows from the trap is shown. Efficiency of plasma confinement in axial holes of the trap is considered and it is found that losses through axial holes do not exceed 6% of total loss of ions from the trap. The absense of high-frequency activity in plasma and high efficiency of electron injection are pointed out. 8 refs.; 6 figs.

37723 (INIS-SU–86/A, pp. 53-55) **Fast current rise studied in the steady-state discharge of the Tuman-3 device.** Askinazi, L.G.; Bogdanova, N.E.; Golant, V.E.; Gryaznevich, M.P.; Izvozchikov, A.B.; Lebedev, S.V.; Sakharov, N.V.; Shakhovets, K.G. Voprosy atomnoj nauki i tekhniki.; no. 3.

Mathematical simulation of experiments with rapid current rise i_p=25 MA/s in the Tuman-3 tokamak is performed. It is shown that the time of current density stationary profile installation, which in the experiment is an order lower the skin time calculated for the whole cord is determined by the time of current pass through external region of plasma cord, where q>1. In the process of current rise on plasma periphery a developed magnetic island for the second mode is formed, as a result, thermal conductivity in the external part of the cord increases and periphery is not warmed up, therefore, the time of current penetration inside the cord decreases. Experimental data do not contradict neoclassical conductivity theory. 12 refs.; 5 figs.

37724 (INIS-SU–86/A, pp. 49-52) **Impurity ion diffusion in stellaration-type traps.** Zolotukhin, A.V.; Shishkin, A.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Voprosy atomnoj nauki i tekhniki.; no. 3.

Plasma diagnosis for the measurement of ion temperature in time in plasma of the T-15 facility for CO_2-laser radiation scattering on plasma density thermal fluctuations is considered. The use of pulse-periodic CO_2-laser of the Dyatel type with a high energy per pulse permits to record ion temperature at plasma density of >or approx. 1.10^{13} cm^{-3}. The detection system is considered. On the basis of experimental data it is shown that parameters of the studied Ge:Zn detectors are sufficient for measurement conduction. The given method is compared with other scattering diagnostics developed abroad. 25 refs.; 4 figs.

Fizicheskij Inst. 1988. (In Russian). In *Experimental and theoretical physics.* Order Number DE89012156/JAW. Available from NTIS (US Sales Only), PC A04/MF A01; INIS.

Kratkie soobshcheniya po fizike.; no. 8.

The effect of electron distribution function inhomogeneity, occurring in bremsstrahlung absorption of laser light, on heat transfer is determined by the numerical solution of the kinetic equation. In comparison with the classical value, the heat flux is found to be decreased more than 1.5 times at > 10^{14} W/cm^2 laser radiation rate. 5 refs.; 2 figs.

37728 (IPPJ–815) **Homeostasis in plasma confinement at beta close to unity.** Hirano, Kei-ichi. Nagoya Univ. (Japan). Inst. of Plasma Physics. Feb 1987. 12p. Order Number DE88780058/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A steady state solution to magnetic confinement system has been studied self-consistently to find how energy confinement time tau_E is adjusted to meet required exact balancing of injected and flowing out fluxes of particles and energies. It is demonstrated that, in case high power input into a plasma is allowed to ensure $< \beta > 1$ state, homeostasis appears and tau_E becomes independent of any transport process.

37729 (IPPJ–822) **Long-time correlation for the chaotic orbit in the two-wave Hamiltonian.** Hatori, Tadatsugu; Irie, Haruyuki. Nagoya Univ. (Japan). Inst. of Plasma Physics. Mar 1987. 35p. Order Number DE88780060/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The time correlation function of velocity is found to decay with the power law for the orbit governed by a Hamiltonian, $H = v^2/2\text{-}M \cos x - P \cos[k(x - t)]$. The renormalization group technique can predict the power of decay for the correlation function defined by the ensemble average. The power spectrum becomes the 1/f-type for a special case.

37730 (IPPJ–823) **Plasma current startup by lower hybrid waves in the JIPP T-IIU tokamak.** Toi, K.; Ohkubo, K.; Kawahata,

K. Oak Ridge Technical Enterprises, TN (USA). Apr 1987. 36p. Order Number DE88780061/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

This paper describes the characteristic behaviours of lower hybrid current startup in JIPP T-IIU. The current startup is carried out by injection of 800 MHz lower hybrid waves into cold and low density plasmas (Te = 10 to 20 eV, n-bar$_e$ = 1 to 2 x 10^{12} cm^{-3}) produced by electron cyclotron resonance or lower hybrid waves only. The plasma current rises up with a characteristic rise time tau$_r$($\geq \sim$ 30 to 50 ms) and approaches a quasi-steady state value I_{pm} (=5 to 20 kA), when LHW power of 10 to 50 kW is injected into a torus, controlling the vertical field. The rise time is inversely proportional to the bulk electron density n-bar$_e$, and is comparable to the collision time of current-carrying high energy electrons with bulk plasmas. On the other hand, the current drive efficiency in the quasi-steady state is almost independent of n-bar$_e$, i.e., $I_{pm}P_{LH}$ = 0.4 to 0.7 A/W for n-bar$_e$ = 0.8 to 4 x 10^{12} cm^{-3}. The conversion efficiency of rf energy injected into the torus is typically 5% during current rise phase, and 10% at the most efficient case. The effects of the initial injection of ECH power and the observed parametric instabilities on the current startup are investigated from a viewpoint of seed current generation. During rapid current rise when appreciably negative loop voltage is observed the bulk electrons are heated up to 150 eV. Various heating mechanisms responsible for the bulk electron heating are discussed.

37731 (IPPJ–824) **Energy eigenvalues of helium-like atoms in dense plasmas.** Hashino, Tasuke; Nakazaki, Shinobu; Kato, Takako; Kashiwabara, Hiromichi. Nagoya Univ. (Japan). Inst. of Plasma Physics. Apr 1987. 15p. Order Number DE88780062/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

Calculations based on a variational method with wave functions including the correlation of electrons are carried out to obtain energy eigenvalues of Schroedinger's equation for helium-like atoms embedded in dense plasmas, taking the Debye-Hueckel approximation. Energy eigenvalues for the 1^1S, 2^1S, and 2^3S states are obtained as a function of Debye screening length.

37732 (IPPJ–826) **Measurement of radiation power from the JIPP T-IIU tokamak plasma.** Ogawa, Isamu. Nagoya Univ. (Japan). Inst. of Plasma Physics. Apr 1987. 101p. Order Number DE88780063/JAW. Available from NTIS (US Sales Only), PC A06/MF A01.

Characteristics of a pyroelectric detector, a metal-film bolometer and a thermistor are investigated in order to attain high reliability of the bolometric measurement. The spurious signal which appears on a pyroelectric detector is efficiency eliminated by setting a mask close to the detector, which has a function of avoiding the direct incidence of photons on its electrode. This is verified with the consistency of integrated value of the signal. The detector is calibrated with a HeNe laser taking the reflection on the detector surface into account. No temporal change has been seen on the sensitivity of the detector calibrated by this method. We also developed a thin metal-film bolometer with high sensitivity (12.9 Ω/mJ), high time response (3 μs) and well defined thermal characteristics. The calibration of this detector was performed by supplying a bias current through its resistor. We constructed a bolometric system with high time response and high spatial resolution, which consisted of twelve pyroelectric detectors and a metal-film bolometer. The radiation power measured with the pyroelectric detector agrees with that measured with the calibrated metal-film bolometer within 10%. Spectroscopic and bolometric measurements with spatial and temporal resolution show that large radiation loss brings about the decrease in electron and ion temperatures and plasma energy. Carbon limiters have an effect to suppress the radiation power for ohmic plasma, but are insufficient for ICRF heated plasma. The main contribution to radiation power may be attributed to Fe impurity released from the ICRF antennae, the Faraday shield and vacuum vessel. By making carbonization of the wall and in-vessel components, the Fe impurity is suppressed to a low level (n_{Fe}/n_e 0.04%) and the radiation power is reduced to $P_{rad}/(P_{OH} + P_{rf})$ 20% and emissivity throughout the plasma region is reduced.

37733 (JAERI-M–88-229) **Measurement of the current distribution in JT-60 plasma by He beam.** Nishino, Nobuhiro; Kubo, Hirotaka; Koide, Yoshihiko; Sakasai, Akira; Sugie, Tatsuo; Takeuchi, Hiroshi. Japan Atomic Energy Research Inst., Tokyo (Japan). Nov 1988. 29p. (In Japanese). Order Number DE89790752/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

The current distribution in a tokamak plasma concerns with plasma confinement and MHD stabilization, moreover, this gives the helpful information of the current drive technique by non-inductive method, for example LHCD, necessary in a tokamak fusion reactor. However, it is impossible to measure the current distribution directly, we have to measure the poloidal magnetic field instead of this distribution. We propose the poloidal field measurement in JT-60 by Zeeman effect of line spectra from neutral He beam. When viewing perpendicular to the magnetic field direction, the π components of the splitting lines are polarized parallel to the field. The local field direction is determined from the polarization angle of the spectral line. A spatially resolved measurement can be realized by several detection systems. When using the active beam apparatus (200 keV, 0.6A, 100 ms) as probe beam of this system, the photon number and SN ratio are small in case of the electron density being larger than 6 x 10^{19} m^{-3} because of beam attenuation. The electron density is smaller than 6 x 10^{19} m^{-3} in LHCD experiments, therefore it is able to measure the current distribution in JT-60. However, the new method will be needed in high density plasma.

37734 (LA-UR–89-2085) **Design of an explosive pulsed power system for driving 16-MA plasma flow switch experiments.** Goforth, J.H.; Caird, R.S.; Fowler, C.M.; Greene, A.E.; Hodgdon, M.L.; Lindemuth, I.R.; Marsh, S.P.; Oona, H.; Reinovsky, R.E.; Turchi, P.J. Los Alamos National Lab., NM (USA). 1989. 9p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890710–9: 5. international conference on megagauss magnetic field generation and related topics, Novosibirsk, USSR, 3-7 Jul 1989). Order Number DE89014297/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

We have described a system that uses a MK-IX helical generator to deliver 11 MA to a 140-nH pulse compression circuit. The purpose of that system is to drive a plasma z-pinch experiment. 11 refs., 5 figs.

37735 (LA-UR–89-2088) **The high density z-pinch II experiment.** Hammel, J. Los Alamos National Lab., NM (USA). 1989. 6p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8904107–6: 2. international conference on high-density pinches (ICHDP-2), Laguna Beach, California, USA, 26-28 Apr 1989). Order Number DE89014295/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The HDZP II is an experiment with the objective of taking a z-pinch plasma, created from a small diameter solid deuterium fiber, up to the Pease-Braginskii current limit while maintaining Bennett equilibrium (constant radius) throughout the current pulse. This paper discusses this experiment.

37736 (LA-UR–89-2144) **Radiative collapse of a Bennett-relaxed z-pinch.** Turner, L. Los Alamos National Lab., NM (USA). 1989. 10p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8904107–5: 2. international conference on high-density pinches (ICHDP-2), Laguna Beach, California, USA, 26-28 Apr 1989). Order Number DE89014290/JAW. Available from NTIS, PC A02/MF A01 - OSTI.

The global evolution of a z-pinch has been studied with the assumption of a relaxed state consisting of ions and electrons, each in a rigidly drifting isothermal Maxwellian distribution. This speculative approach has the pragmatic feature of possessing phenomenologically useful global parameters such as drift velocity and temperature that vary in accordance with global physical quantities such as energy and entropy. The plasma gains energy from a time-dependent electric field by means of Poynting's vector. Coulomb collisions between electrons and ions is calculated with a Fokker-Planck treatment analogous to that used by Dreicer to calculate runaways. For a variety of initial conditions and time-independent applied electric fields, the pinch evolution always culminates in a time-independent (attractor) state whose current is the Pease-Braginskii current and whose final radius is proportional to (line density)$^{3/4}$/(electric field)$^{1/2}$. Before the final state is attained, the pinch may bounce toward and away from a highly collapsed state. For the case of a

Bennett pinch, the classical limit of the resistivity is attained when the line density is much greater than $4\pi m_e/e^2\mu_o$; i.e., 3.55×10^{14} m^{-1}. 6 refs., 2 figs.

37737 (LA-UR–89-2188) **The stability of the High-Density Z-Pinch.** Glasser, A.H.; Nebel, R.A. Los Alamos National Lab., NM (USA). 1989. 16p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-8904107–7: 2. international conference on high-density pinches (ICHDP-2), Laguna Beach, CA, USA, 26-28 Apr 1989). Order Number DE89014276/JAW. Available from NTIS, PC A03/MF A01 - OSTI.

Fiber-initiated High Density Z-Pinches at Los Alamos, NRL, and Karlsruhe have shown anomalously good stability. Kink modes are never seen, and sausage modes are at least delayed until late in the discharge. The success of these devices in reaching fusion conditions may depend on maintaining and understanding this anomalous stability. We have developed two numerical methods to study the stability in the regime where fluid theory is valid. While our methods are applicable to all modes, we will describe them only for the m = 0 sausage mode. The appearance of sausage modes late in the discharge and the total absence of kink modes suggest that an understanding of sausage modes is more urgent, and it is also simpler. 14 refs., 8 figs.

37738 (PPPL–2623) **Atomic physics studies of highly charged ions on tokamaks using x-ray spectroscopy.** Beiersdorfer, P.; von Goeler, S.; Bitter, M.; Hill, K.W. Princeton Univ., NJ (USA). Plasma Physics Lab. Jul 1989. 42p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE89014600/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

An overview is given of atomic physics issues which have been studied on tokamaks with the help resolution x-ray spectroscopy. The issues include the testing of model calculations predicting the excitation of line radiation, the determination of rate coefficients, and accurate atomic structure measurements. Recent research has focussed primarily on highly charged heliumlike ($22 \leq Z \leq 28$) and neonlike ($34 \leq Z \leq 63$) ions, and results are presented from measurements on the PLT and TFTR tokamaks. Many of the measurements have been aided by improved instrumental design and new measuring techniques. Remarkable agreement has been found between measurements and theory in most cases. However, in this review those areas are stressed where agreement is worst and where further investigations are needed. 19 refs., 13 figs., 2 tabs.

37739 (PPPL–2630) **Pulse length assessment of compact ignition tokamak designs.** Stotler, D.P.; Pomphrey, N. Princeton Univ., NJ (USA). Plasma Physics Lab. Jul 1989. 31p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE89014601/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A time-dependent zero-dimensional code has been developed to assess the pulse length and auxiliary heating requirements of Compact Ignition Tokamak (CIT) designs. By taking a global approach to the calculation, parametric studies can be easily performed. The accuracy of the procedure is tested by comparing with the Tokamak Simulation Code which uses theory-based thermal diffusivities. A series of runs is carried out at various levels of energy confinement for each of three possible CIT configurations. It is found that for cases of interest, ignition or an energy multiplication factor $Q \gtrsim 7$ can be attained within the first half of the planned five-second flattop with 10–40 MW of auxiliary heating. These results are supported by analytic calculations. 18 refs., 7 figs., 2 tabs.

37740 (PPPL–2631) **Multiple mode model of tokamak transport.** Singer, C.E.; Ghanem, E.S.; Bateman, G.; Stotler, D.P. Princeton Univ., NJ (USA). Plasma Physics Lab. Jul 1989. 12p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE89014598/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Theoretical models for radical transport of energy and particles in tokamaks due to drift waves, rippling modes, and resistive ballooning modes have been combined in a predictive transport code. The resulting unified model has been used to simulate low confinement mode (L-mode) energy confinement scalings. Dependence of global energy confinement on electron density for the resulting model is also described. 26 refs., 1 fig., 2 tabs.

37741 (PPPL–2634) **Tokamak electrical conductivity modified by electrostatic trapping in the applied electric field.** Chang, C.S. Princeton Univ., NJ (USA). Plasma Physics Lab. Jul 1989. 17p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE89014606/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Passing electrons traveling in the same direction as the applied Ohmic electric field, near the trapped-passing boundary, can get electrostatically trapped by the applied Ohmic potential, reverse their parallel flow direction, and become passing particles traveling in the opposite direction. The number of these electrons is proportional to the applied voltage and is small. But, the amount of change in their time-averaged parallel velocity by reversing their flow direction, is about twice the average parallel velocity of the barely passing electrons and is large. Hence, these electrostatically trapped particles can significantly contribute to the Ohmic electrical current. The new electrical conductivity is calculated in the banana regime using a pitch angle scattering operator, and the values are found to be significantly enhanced from previous neoclassical theories. 4 refs., 2 figs.

37742 (SAND–88-3311C) **Two-dimensional effects in imploding plasma liners.** Roderick, N.F.; Hussey, T.W. Sandia National Labs., Albuquerque, NM (USA). [1989]. 12p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890710–1: 5. international conference on megagauss magnetic field generation and related topics, Novosibirsk, USSR, 3-7 Jul 1989). Order Number DE89014482/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Analytic modeling and magnetohydrodynamic simulations have been conducted to investigate two-dimensional effects in imploding plasma shells. These effects include short wavelength disturbances caused by instabilities at the plasma magnetic field interface, long wavelength instabilities associated with plasma annulus formation, and perturbations resulting from the power flow to the plasma annulus. The numerical calculations were carried out using the two-dimensional single-fluid MHD code MACH2 for different plasma density profiles and electrode geometries. Results for short wavelength perturbations show that these phenomena behave in a manner consistent with analytic linear and heuristic nonlinear models. At stagnation they have a negligible effect on the uniformity during the initial coupling to the target, even for large initial perturbations. The disturbances manifest themselves primarily in a rippling of the back of the plasma shell with significant effects, even in this region, not occurring until late in the stagnation process. Long wavelength perturbations produced by a straight axial gas injection for gas puff implosions can lead to pronounced axial nonuniformity, "zippering," at stagnation. Variations of the injection conditions and electrode geometry can produce more uniform stagnation. Changes in the mass profile, gas injection angle, and electrode shape can all be used to achieve significantly greater stagnation uniformity. Consistent calculations for a entire implosion process form gas injection to stagnation including vacuum power flow indicate the degree of coupling of short wavelength, long wavelength and power flow perturbations. Comparison with experimental data show agreement between analytic, numerical and experimental results. 23 refs., 6 figs.

37743 (SAND–89-0443C) **Two-dimensional effects in hollow core Z-pinches.** Roderick, N.F.; Hussey, T.W. Sandia National Labs., Albuquerque, NM (USA). 1989. 15p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8904107–4: 2. international conference on high-density pinches (ICHDP-2), Laguna Beach, California, USA, 26-28 Apr 1989). Order Number DE89014188/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Analytic modeling and magnetohydrodynamic simulations have been conducted to investigate two-dimensional effects in imploding plasma shells. These effects include short wavelength disturbances caused by instabilities at the plasma magnetic field interface, long wavelength instabilities associated with plasma annulus formation, and perturbations resulting from the power flow to the plasma

annulus. The numerical calculations were carried out using the two-dimensional single-fluid MHD code MACH2 for different plasma density profiles and electrode geometries. Results for short wavelength perturbations show that these phenomena behave in a manner consistent with analytic linear and heuristic nonlinear models. At stagnation they have a negligible effect on the uniformity during the initial coupling to the target, even for large initial perturbations. The disturbances manifest themselves primarily in a rippling of the back of the plasma shell with significant effects, even in this region, not occurring until late in the stagnation process. Long wavelength perturbations produced by a straight axial gas injection for gas puff implosions can lead to pronounced axial nonuniformity, "zippering," at stagnation. Variations of the injection conditions and electrode geometry can produce more uniform stagnation. Changes in the mass profile, gas injection angle, and electrode shape can all be used to achieve significantly greater stagnation uniformity. Consistent calculations for a entire implosion process from a gas injection to stagnation including vacuum power flow indicate the degree of coupling of short wavelength, long wavelength and power flow perturbations. Comparison with experimental data show agreement between analytic, numerical and experimental results. 23 refs., 7 figs.

37744 (UCLA/PPG–1237) **Role of alpha particle damping in fast wave current drive and heating.** Mau, T.K. California Univ., Los Angeles, CA (USA). Inst. for Plasma and Fusion Research. May 1989. 9p. Sponsored by DOE Energy Research. DOE Contract FG03-88ER52151. (CONF-8905120–18: 8. topical conference on radio frequency power in plasmas, Irvine, CA, USA, 1-3 May 1989). Order Number DE89014609/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The impact of energetic alpha particle wave absorption on the range of frequencies for efficient fast wave current drive and heating in a fusion reactor is investigated. The energetic alpha damping decrement is calculated, using a slowing down distribution function, and compared to electron and fuel ion damping over a wide range of frequencies. A combination of strong alpha damping and edge electron absorption in the higher ion harmonic regime limits core fast wave current drive to the lower harmonics (1 = 2,3). 4 refs., 4 figs.

37745 High intensity laser-matter interactions. SPIE - Volume 913. Campbell, E.M.; Baldis, H. 181p. SPIE Society of Photo-Optical Instrumentation Engineers, Bellingham, WA (1988). (CONF-8801117–: High intensity laser matter interactions, Los Angeles, CA, USA, 12-13 Jan 1988).

These proceedings collect papers on intense laser-matter interactions. Topics include: laser-plasma interactions, laser-fusion compression, laser-driven plasma accelerators, physics of condensed matter, x-ray holography, XUV lasers, x-ray emission from laser plasmas, terawatt lasers, and behavior of metals under laser illumination.

37746 Spatial structure of transient plasmas revealed with a CCD camera. Scheeline, A. (School of Chemical Sciences, Univ. of Illinois, Urbana, IL (US)); White, J.S.; Mork, B.J. v.v of 1988 Pittsburgh conference and exposition on analytical chemistry and applied spectroscopy (abstracts). Pittsburgh Conference, Pittsburgh, PA (1988). (CONF-880204–: 39. Pittsburgh conference and exposition on analytical chemistry and applied spectroscopy, New Orleans, LA, USA, 22-26 Feb 1988).

Technical Paper NO. 041.

Spark discharges, used for quantitative analysis of conducting solids, have been examined with spatial and temporal resolution for many years. Numerous doubts concerning the fidelity of the data have arisen, due to the nonlinearity of detector response. The recent availability of charge-coupled array detectors (CCDs) has permitted the solution of this problem. Linear response over four orders of magnitude, negligible blooming, and total freedom from distortion can be obtained with commercially available apparatus. Time-gated spatially-resolved data from a high voltage unidirectional spark in argon are shown, indicating for the first time the amount of self-absorption in the spark and the symmetry of the vapor cloud produced by the spark. Correlations with previous models of vapor propagation are made.

37747 Electron beam propagation in inhomogeneous media. Lee, M.H. (Univ. of Georgia, Dept. of Physics and Astronomy, Athens, GA (US)). v.v of Nonlinear optical beam manipulation, beam combining, and atmospheric propagation. Fischer, R.A. SPIE Society of Photo-Optical Instrumentation Engineers, Bellingham, WA (1988). (CONF-8801121–: Nonlinear optical beam manipulation, beam combining, and atmospheric propagation, Los Angeles, California, USA, 11-14 Jan 1988).

This study concerns energetic dense electron beam propagation in nuclear disturbed environments. In particular, it centers on beam losses through dissipation processes. Relevant atmospheric conditions known from high-altitude nuclear explosions are summarized. Modeling of geomagnetic data as well as some new theoretical ideas for studying beam propagation are briefly described.

37748 Ionization equilibrium in dense plasmas. Ying, R. Thesis (Ph. D.). 384p. Boston College, Boston, MA (1987). Available from University Microfilms, PO Box 1764, Ann Arbor, MI 48106, Order No.88-07,578.

The average degree of ionization for a strongly coupled plasma is investigated and calculated. Two widely used approaches: the Saha equation method and the Thomas-Fermi (TF) statistical atomic model are adopted to determine the degree of ionization. Both methods are modified in a number of ways to include the strong-coupling effect in the plasma. In the Saha equation approach, the strong-coupling effects are introduced through: (i) a replacement of the Coulomb potential by a screened Debye potential; (ii) adoption of the Planck-Larkin partition function; (iii) description of the electron component by Fermi-Dirac statistics. The calculated degree of ionization exceeds that obtained from the original Saha equation, exhibits a minimum as a function of the density and shows an abrupt phase transition from weakly ionized to a fully ionized state. The zero-temperature TF model for compressed ions and the finite-temperature TF model for ions are investigated for the first time. In order to take into account the strong-coupling effect in a systematic way, a strong-coupling TF model is set up. Favorable results with the relatively simple approximations indicate that the newly established strong-coupling TF model is a more systematic and physically consistent approach.

37749 A computer model of the ZTH energy system at Los Alamos. Honkel, H. (Los Alamos National Lab., Los Alamos, NM (US)). *IEEE Computer Applications in Power (USA),* 2(2): 23-26 (Apr 1989).

Controlled thermonuclear fusion research began in the 1950s in the United States, Breat Britain, and the Soviet Union. From the beginning, Los Alamos was a leader in this research and continues to play an important role. From the world's first successful laboratory experiments to produce magnetically confined thermonuclear reactions (at Los Alamos in 1958), significant advances have been made throughout the world in magnetic confinement research. As part of the magnetic fusion energy research program to develop fusion energy as a practical, economical energy resource, Los Alamos is investigating two concepts of fusion: the reversed field pinch (RFP) and the compact toroid. These concepts have much potential as small, compact fusion energy sources. Using the results of an experimental small fusion energy machine (ZT-40M) at Los Alamos as a basis, a larger, higher energy machine is being constructed, called ZTH. The ZTH machine originally had a design plasma current magnitude of 4 million amperes (4MA) compared to the smaller ZT-40M machine of 450,00 amperes. The system is presently under construction in a 2MA-rated configuration.

37750 An overview of atomic and molecular processes in critical velocity ionization. Lai, S.T. (Air Force Geophysics Lab., Hanscom Air Force Base, Bedford, MA (US)); Murad, E.; McNeil, W.J. *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 124-134 (Apr 1989).

Alfven's critical ionization velocity (CIV) is a multistep process involving plasma physics and plasma chemistry. The authors present an overview of the time development of some atomic and molecular processes in CIV. In the pre-onset stage, metastable states play an important role: They provide an energy pooling mechanism allowing low energy electrons to participate in the ionization processes; they may explain the low energy threshold as well as the fast time scale

in the onset of CIV. For a sustaining CIV to occur, Townsend's criterion has to be satisfied. The kinetic energies of the neutrals are transformed to plasma wave energies via beam-plasma instabilities, and the plasma waves that heat the electrons result in a tail formation. Excitation of neutrals with subsequent radiation is an important energy loss mechanism. Finite beam size also limits the instability growth rate. In the propagation of CIV, ion-molecule reactions and molecular dissociative recombination are important. Ion-molecule reactions change the temporal chemical composition in a CIV process and help explain some results in CIV experiments. Molecular dissociative recombination reduces the plasma density, lowers the effective neutral mass, and loses energy via excitation and radiation; it tends to quench the propagation of CIV. Depending on various parameters, oscillatory behavior of CIV may occur.

37751 A heat-driven monochromatic light source. Stefani, F. (Carnegie Mellon Univ., Pittsburgh, PA (US)); Lawless, J.L. *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 295-302 (Apr 1989).

This work investigates theoretically the efficiency with which heat may be converted into resonance radiation in a cesium thermionic diode. An analytical model of a thermionic converter is employed which combines the coupled effects of line radiation transport, excited-state kinetics, and plasma diffusion. Operating regimes are established for various degrees of optical density in the plasma. The results indicate that monochromatic radiation can be produced with efficiencies on the order of 30 percent provided there is an adequate voltage drop across the plasma. In this study, a drop of one volt was used since it can be maintained without any electrical power input to the device. It is found that high efficiencies come by virtue of the higher interelectrode distances which the solutions will accommodate, and that radiation can be generated efficiently, even with optically dense gases.

37752 X-ray absorption spectroscopy of laser-produced plasmas: A study of the experiment and data analysis. Balmer, J. (Institute for Applied Physics, University of Berne, Berne, Switzerland(CH)); Lewis, C. L. S.; Corbett, R. E.; Robertson, E.; Saadat, S.; O'Neill, D.; Kilkenny, J. D.; Back, C. A.; Lee, R. W. *Physical Review [Section] A: General Physics (USA),* 40(1): 330-340 (1 Jul 1989).

The novel technique of point-projection backlighting is used to probe alaser-produced plasma. A spatially restricted source of x rays is created byirradiating a fiber which is used to backlight a plasma. Temporal resolution ofthe absorption spectrum is obtained by creating the backlight with a pulse thatis delayed in time from the main, plasma-producing, laser. The backlight canalso be of shorter duration than the main laser pulse providing for enhancedtime resolution and therefore less temporal averaging. The results forlow-Z aluminum and silicon targets are presented. The low-Zabsorption spectra using both low-Z (e.g., aluminum) and high-Z(e.g., molybdenum) elements for backlighting are studied. A description of thistechnique and the analysis of the data obtained is presented.

37753 Dynamics of a collisional, capacitive RF sheath. Lieberman, M.A. (Univ. of California, Berkeley, Berkeley, CA (US)). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 338-341 (Apr 1989).

A self-consistent solution for the dynamics of a high-voltage, capacitive RF sheath driven by a sinusoidal current source is obtained, under the assumptions of time-independent, collisional ion motion and inertialess electrons. The results are that the ion current density is $1.68\epsilon_o(2e/M)^{1/2}V\text{-bar}^3 2/\lambda_i^{1/2}/s^5 2/_m$, where V-bar is the dc self-bias voltage, λ_i is the ion mean free path, s_m is the sheath thickness, e/M is the ion charge-to-mass ratio, and ϵ_o is the free-space permittivity, the sheath capacitance per unit area for the fundamental voltage harmonic is $1.52\epsilon_o/s_m$, the ratio of the dc to the peak value of the oscillating voltage is 0.40, the second and third voltage harmonics are, respectively, 19.3 and 5.3 percent of the fundamental, and the conductance per unit area for stochastic heating by the oscillating sheath is $2.17(e^2n_o/m\mu_e)\lambda^2 3/_D/\lambda_i s_m^{1/3}$, where n_o is the ion density and λ_D is the Debye length at the plasma-sheath edge, and $\mu_e = (8eT_e/\pi m)^{1/2}$ is the mean electron speed.

37754 (CEA-CONF–9767) **Prospects of ceramic tritium breeder materials.** Roth, E.; Conservatoire National des Arts et Metiers; , 75 - Paris; Charpin, J.; Roux, N. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physico-Chimie. 1988. 33p. (CONF-880929–: 15. symposium on fusion technology, Utrecht, Netherlands, 19-23 Sep 1988). Order Number DE89789262/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

An overall evaluation of value as blanket material in attempted. The ceramic exhibiting the lowest residence time for tritium is Li_2ZrO_3 which enables one to envisage operating with this material a ceramic blanket at temperatures even lower than with Li_2O. Tentative conclusions from considerations on blanket concepts and experimental results that we quote in this paper favor giving more importance to studies of ceramic breeder blankets for NET or ITER than seems the case presently. 35 refs.

37755 (CFFTP-G–85041) **Review of synergisms in materials erosion due to multispecies impact.** Haasz, A.A.; Auciello, O.; Stangeby, P.C. Canadian Fusion Fuels Technology Project, Toronto, ON (Canada). May 1985. 62p. (UTIAS–47). Order Number DE89618772/JAW. Available from NTIS (US Sales Only), PC A04/MF A01 - OSTI; INIS.

Plasma-surface interaction phenomena have become a subject of major interest because of their relevance in two important technological developments of recent decades, viz, microelectronics and thermonuclear fusion. Microelectronic fabrication often involves the use of relatively low-pressure/low-temperature plasma discharges for etching micron-size features in integrated circuits; here erosion is a desired effect. Fusion plasmas, by contrast, cause erosion of the fusion device inner walls, which is generally not desirable. In both cases surfaces are bombarded simultaneously by plasma species which include ions, neutral atoms, electrons and photons, which might lead to enhanced erosion due to synergistic effects. Work performed to date suggests that similar chemistry may be involved in the erosion process associated with some semiconductor and fusion related materials: SiF_4, $SiCl_4$ and CH_4, are, for example, some of the principal species evolving from Si and C surfaces, when exposed to F, Cl and H atoms, respectively, causing the observed erosion. Considerable effort has been expended on studies involving synergistic effects for semiconductor fabrication. Research on synergism related to the erosion of fusion materials (C and carbon compounds) commenced comparatively recently; however, its importance has been increasingly recognized, and evidence of possible synergistic erosion of graphite has recently been obtained in the PLT fusion device. In light of the the interdisciplinary nature of the subject, experimental and theoretical work on synergistic effects in erosion of both semiconductors and fusion materials will be critically reviewed here in an attempt to unify concepts related to results and mechanisms proposed to explain the observed phenomena, and to explore possible new avenues of research. 128 refs.

37756 (CFFTP-G–86045) **Neutronics analysis for aqueous self-cooled fusion reactor blankets.** Varsamis, G.; Embrechts, M.J.; Jaffa, R.; Steiner, D.; Deutsch, L.; Gierszewski, P. Canadian Fusion Fuels Technology Project, Toronto, ON (Canada). Jun 1986. 7p. (CONF-860652–: 7. topical meeting on the technology of fusion energy, Reno, Nevada, USA, 15-19 Jun 1986). Order Number DE89618746/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

The tritium breeding performance of several Aqueous Self-Cooled Blanket (ASCB) configurations for fusion reactors has been evaluated. The ASCB concept employs small amounts of lithium compound dissolved in light or heavy water to serve as both coolant and breeding medium. The inherent simplicity of this concept allows the development of blankets with minimal technological risk. The tritium breeding performance of the ASCB concept is a critical issue for this family of blankets. Contrary to conventional blanket designs there will be a significant contribution to the tritium breeding ratio (TBR) in the water coolant/breeder of duct shields, and the 3-D TBR will therefore be similar to the 1-D TBR. The tritium breeding

performance of an ASCB for a MARS-like-tandem reactor and an ASCB based breeding-shield for the Next European Torus (NET) are assessed. Two design options for the MARS-like blanket are discussed. One design employs a vanadium first wall, and zircaloy for the structural material. The trade-offs between light water and heavy water cooling options for this zircaloy blanket are discussed. The second design option for MARS relies on the use of a vanadium alloy as the stuctural material, and heavy water as the coolant. It is demonstrated that both design options lead to low-activation blankets that allow class C burial. The breeder-shield for NET consists of a water-cooled stainless steel shield.

37757 (CFFTP-G–87005) **Canadian contributions to the safety and environmental aspects of fusion.** Stasko, R.; Wong, K. Canadian Fusion Fuels Technology Project, Toronto, ON (Canada). May 1987. 10p. (CONF-8705358–: Canadian Nuclear Society annual meeting, Montreal, Canada, 18-22 May 1987). Order Number DE89619915/JAW. Available from NTIS (US Sales Only), PC A02/MF A01 - OSTI; INIS.

Since next-step fusion devices will be fuelled with mixtures of tritium and deuterium, the knowledge base and tritium handling experience associated with the operation of CANDU reactors is viewed as relevant to the development of safe fusion technology. Fusion safety issues will be compared with fission safety experience, after which specific Canadian activities in support of fusion safety will be overviewed. In addition, recommendations for appropriate fusion safety criteria will be summarized. 18 refs.

37758 (CONF-8904230–1) **Recent results on cleaning and conditioning the ATF vacuum system.** Langley, R.A.; Clark, T.L.; Glowienka, J.C.; Goulding, R.H.; Mioduszewski, P.K.; Rasmussen, D.A.; Rayburn, T.F.; Schaich, C.R.; Shepard, T.D.; Simpkins, J.E.; Yarber, J.L. Oak Ridge National Lab., TN (USA). 1989. 11p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From AVS topical conference on surface conditioning of vacuum systems; Los Angeles, California, USA; 3-7 Apr 1989. Order Number DE89012971/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Techniques for cleaning and conditioning the vacuum vessel of the Advanced Toroidal Facility (ATF) and its internal components are described. The vacuum vessel cleaning technique combines baking to 150°C and glow discharges with hydrogen gas. Chromium gettering is used to further condition the system. The major internal components are the anodized aluminum baffles in the Thomson scattering system, a graphite-shielded ICRF antenna, two graphite limiters, and a diagnostic graphite plate. Three independent heating systems are used to bake some of the major components of the system. The major characteristics used for assessing cleanliness and conditioning progress are the maximum pressure attained during bakeout, the results of gas analysis, and relevant plasma parameters (e.g., time to radiative decay). Details of the various cleaning and conditioning procedures and results are presented. 5 refs., 8 figs., 3 tabs.

37759 (DOE/ER–0313/5) **Fusion reactor materials semiannual progress report for the period ending September 30, 1988.** Oak Ridge National Lab., TN (USA). Apr 1989. 335p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. (ORNL/M–798). Order Number DE89013734/JAW. Available from NTIS, PC A15/MF A01 - OSTI; GPO Dep.

This paper discusses the following topics on fusion reactor materials: irradiation, facilities, test matrices, and experimental methods; dosimetry, damage parameters, and activation calculations; materials engineering and design requirements; fundamental mechanical behavior; radiation effects; development of structural alloys; solid breeding materials; and ceramics.

37760 (EUR-CEA-FC–1353) **Tore Supra first wall description and behaviour during the initial plasma experiments.** Grosman, A.; Achard, M.H.; Chappuis, P.; Cordier, J.J.; Deschamps, P.; Gauthier, E.; Lipa, M. Association Euratom-CEA, Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee. Sep 1988. 34p. Available from NTIS (US Sales Only), PC A03/MF A01.

TORE SUPRA is a large-size, high-field superconducting tokamak (B_{pol}=4.5T, R=2.37 m,a=0.8m). It has been completed in the beginning of 1988 and is starting its experimental operation. The plasma-wall interaction programme will be mainly devoted to obtaining very long pulses in the next future, i.e. the control of impurity content, power and particule exhaust. The design of the first wall items takes this into account. The inner wall is made of graphite tiles brazed on stainless steel tubes, the outer wall of stainless steel panels. Moreover, three graphite limiters and six ergodic divertor modules have already been installed. Each of these elements is water-cooled (T_{water}=150-230^{0}C, p=3.6MPa). Vessel pumping is achieved by means of three turbomolecular pumps providing 9000l/s H_2 pumping speed. A 250^{0}C baking capability of the vessel is also available. First operations were mainly devoted to conditioning and carbonizing the whole plasma chamber, with RG discharges, allowing to work in homogeneous conditions. The first tokamak discharges are studied for a better knowledge of plasma control and stability in this configuration. Then, power deposition will be particularly investigated so as to prepare for the next steps: additional power and pump limiter operation.

37761 (GA-A–19684) **DIII-D power supply fault system.** Vanderlaan, J.F.; Smith, T.L. General Atomics Co., San Diego, CA (USA). Jun 1989. 3p. Sponsored by DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-890545–5: 6. conference on real-time computer applications in nuclear, particle and plasma physics, Williamsburg, VA, USA, 15-18 May 1989). Order Number DE89014030/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The DIII-D tokamak magnetic confinement fusion device at General Atomics has been equipped with a power supply fault system which provides orderly shutdown in case of any of a number of faults. The nature of the fault dictates the extent of the shutdown required. CAMAC hardware accumulates data and triggers computer acquisition of diagnostic information. The system speeds diagnosis and repair of problems. 6 refs.

37762 (GANIL-P–88-16) **Explosions in Landau Vlasov dynamics.** Suraud, E.; Grand Accelerateur National d'Ions Lourds; , 14 - Caen; Cussol, D.; Gregoire, C.; Boilley, D.; Pi, M.; Schuck, P.; Remaud, B.; Sebille , F. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). 1988. 17p. (CONF-8810261–: International workshop on nuclear dynamics at medium and high energies, Bad Honnef, Germany, F.R., 10-14 Oct 1988;KVI–771). Order Number DE89789225/JAW. Available from NTIS (US Sales Only), PC A03/MF A01.

A microscopic study of the quasi-fusion/explosion transition is presented in the framework of Landau-Vlasov simulations of intermediate energy heavy-ion collisions (bombarding energies between 10 and 100 MeV/A). A detailed analysis in terms of the Equation of State of the system is performed. In agreement with schematic models we find that the composite nuclear system formed in the collision does explode when it stays long enough in the mechanically unstable region (spinodal region). Quantitative estimates of the explosion threshold are given for central symmetric reactions (Ca+Ca and Ar+Ti). The effect of the nuclear matter compressibility modulus is discussed.

37763 (INIS-BR–1549) **Controlled thermonuclear fusion in TOKAMAK type reactors, the European example: Joint European Torus (JET).** Paris, P.J.; Yassen, F.; Assis, A.S. de; Raposo, C. Universidade Federal Fluminense, Niteroi, RJ (Brazil). Jul 1988. 41p. (In Portuguese). Order Number DE89618739/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The development of controlled thermonuclear reaction in TOKAMAK type reactors, and the main projects in the world are presented. The main characteristics of the JET (Joint European Torus) program, the perspectives for energy production, and the international cooperation for viable use of the TOKAMAK are analysed. (M.C.K.).

37764 (INIS-SU–86/A, pp. 30-34) **To the problem of thermal stability of a stellarator reactor.** Dyabilin, K.S. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i

Tekhnike. 1988. (In Russian). In *Thermonuclear synthesis. Scientific-technical collection.* Order Number DE89012166/JAW. Available from NTIS (US Sales Only), PC A04/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 3.

The problem of thermal stability of a self-sustained thermonuclear deuterium tritium reaction in stellarator reactors is considered. On the basis of equations of energy and particle balance criterion of reaction stability is obtained. Using neoclassical model of transfer analysis of reaction stability in stellarator reactors is made. It is shown that from the viewpoint of thermal balance thermonuclear self-sustained deuterium-tritium reaction in the stellarators is stable. Some results of the work are considered as applied to the reactor-tokamak type systems. 3 refs.

37765 (INIS-SU–86/A, pp. 7-9) **Chamber cleaning by glow discharge as a means of the outgassing rate reducing under fast hydrogen atom beam irradiation.** Zhil'tsov, V.A.; Kucheryaev, Yu.A.; Panov, D.A.; Rabin, A.A.; Skovoroda, A.A.; Tarabrin, Yu.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1988. (In Russian). In *Thermonuclear synthesis. Scientific-technical collection.* Order Number DE89012166/JAW. Voprosy atomnoj nauki i tekhniki.; no. 3.

Processes of gas desorption from walss play important role in experiments on the accumulation of ion-hot plasma in open traps. Therefore, a decrease in gas evolution during fast atom beam injection pulse seems urgent. Data on the interaction of a powerful beam of injected atom with the receiver material under experimental conditions in thermonuclear facility are rather scanty. Experiment on long-term purification of the Ogra-4 vacuum chamber by glow discharge in argon and on the measurement of beam atom implantation coefficient as a result is described. It is shown that using the vacuum technique (without heating) the implantation of hydrogen atoms with a factor of 0.7 can be attained. 3 figs.

37766 (INIS-SU–86/A, pp. 9-12) **Internal shielding of thermonuclear reactors.** Zimin, S.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Scientific-technical collection.* Order Number DE89012166/JAW. Available from NTIS (US Sales Only), PC A04/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 3.

Using the criterion of dose restriction at the shielding output the optimization of two- and three-zone shieldings is realized. Optimization results of two-zone shielding on the basis of criterion of fluence restriction for neutrons with $E>0.1$ MeV at the shielding output and criteria for dose restriction in magnetic insulation are compared. For several three-zone shieldings the calculation of the number of displacements in copper stabilizing conductor at the shielding output is presented. On the basis of the calculations criteria for dose restriction in magnet insulation and restrictions of the number of displacements in the copper stabilizing conductor are compared. 5 refs.; 5 figs.

37767 (INIS-SU–86/A, pp. 28-29) **Plasma circuit breaker in a magnetic field as a high-power ion flux generator.** Golovanov, Yu.P.; Dolgachev, G.I.; Zakatov, L.P.; Skoryupin, V.A. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1988. (In Russian). In *Thermonuclear synthesis. Scientific-technical collection.* Order Number DE89012166/JAW. Available from NTIS (US Sales Only), PC A04/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 3.

It is ascertained that plasma circuit breaker (PCB) in the external magnetic field of acute-anguled geometry in the mode when PCB serves as inductive storage loading is a natural magnetoizolated diode. Using PCB as an ion emitter and as a high-voltage generator it proved possible in case of full electron magnetiuzation to attain the maximum efficiency of the storage. The density of ion current evaluated by the measured energy density for 30 J/cm^2 thermocouple and by the energy of 1.5 MeV constitutes 100 A/cm^2. The given method of ion generation is very effective when high ion currents with a high energy are required. 2 refs.

37768 (INIS-SU–86/A, pp. 45-48) **Probe measurements in the gas descharge plasma of a negative hydrogen ion source.** Antipov, S.P.; Elizarov, L.I.; Martynov, M.I.; Chesnokov, V.M. Available from NTIS (US Sales Only), PC A04/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 3.

For the case of multicomponent gas discharge plasma with a high relative density of hydrogen negative ions the methods is suggested and results of volt-ampere characteristics (VAC) treatment of the Langmuir single probe are give. For VAC treatment additional information on relative currents of plasma positive components to the probe is required, as well as fulfilment of the condition $n_H\text{-}/n_e >> (T_e/T_+)^{1/2} >> 1$. VAC for the Langmuir probe were obtained by drawing a curve through a set of experimental points U_3 (voltage on the probe), I_3 (current in the probe circuit), using the least square fit. For the most characteristic operation mode of the source the following results are obtained: $T_e \simeq 3.82$ eV; $T_+ \simeq 1.06$ eV; $n_e \simeq 2.75 \times 10^{10}$ cm^{-3}; $n_H \simeq 209.12 \times 10^{10}$ cm^{-3}. 6 refs.; 2 figs.

37769 (INIS-SU–86/A, pp. 3-6) **Neutron generator based on adiabatic trap.** Golovin, I.N.; Zhil'tsov, V.A.; Panov, D.A.; Skovoroda, A.A.; Shatalov, G.E.; Shcherbakov, A.G. Available from NTIS (US Sales Only), PC A04/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 3.

A possibility of 14 MeV neutron generator (NG) production on the basis of axial-symmetric adiabatic trap with MHD cusped armature for the testing of materials and elements of the DT reactor first wall and blanket structure is discussed. General requirements to NG are formulated. It is shown that the NG variant discussed meets the requirements formulated. Approximate calculation of the NG parameters has shown that total energy consumption by the generator does not exceed 220 MW at neutron flux specific capacity of 2.5 MW/m^2 and radiation test area of 5-6 m^2. 12 refs.; 2 figs.

37770 (LA-UR–89-2205) **KrF lasers for inertial confinement fusion.** Harris, D.B.; Cartwright, D.C.; Figueira, J.F.; McDonald, T.E.; Sorem, M.E. Los Alamos National Lab., NM (USA). 1989. 12p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890711–1: 5. international conference on emerging nuclear energy systems: ICENES '89, Karlsruhe, Germany, F.R., 3-6 Jul 1989). Order Number DE89014272/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The KrF laser has been proposed for inertial confinement fusion (ICF) since its discovery in 1975. Since that time, the laser has seen significant development and has been increased in energy many orders of magnitude to the several kilojoule energy level. The suitability of the KrF laser as a driver for ICF energy applications has been continually reviewed. The latest assessments indicate that the KrF laser still appears to be the leading laser candidate. A worldwide effort exists to advance the KrF laser for ICF applications. 21 refs., 1 fig.

37771 (LA-UR–1909) **Performance of the 10kV, 100-kA pulsed-power modules for the FRX-C magnetic compression experiment.** Rej, D.J.; Waganaar, W.J. Los Alamos National Lab., NM (USA). 1989. 5p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-890665–31: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89014027/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

In this paper, we present detailed performance data collected from over a year's operation of the 25 and 50-kJoule pulsed-power capacitor-bank modules developed for the Los Alamos magnetic fusion facility FRX-C. These modules supply the 5-MA magnet current

needed for the compressional heating of compact toroid plasmoids. To date, 54 modules have been built and successfully tested at their full design rating: 100-kA peak output current at 10-kV charge, $\tau_{1/4}$ = 60 μs (25-kJ module), or 110 μs (50-kJ module), crowbar L/R < 1 ms. Modules are compact, cost about $5000 each, and though designed for 25 or 50 kJ, they can be easily modified for other pulsed-power applications. Energy is stored in 25-kJ capacitors. Start and crowbar switching is performed with a pair of water-cooled, size-D ignitrons. As an alternative to an ignitron, crowbar switching by solid-state rectifiers has been successfully demonstrated. Current is conducted between components and to the load by parallel-plate transmission lines and by a parallel array of commercially-available coaxial cable. 4 refs., 8 figs.

37772 (PPPL–2625) **Formulation and solution of the delayed gamma dose rate problem using the concept of effective delayed gamma production cross section.** Liew, S.L.; Ku, L.P. Princeton Univ., NJ (USA). Plasma Physics Lab. Jun 1989. 36p. Sponsored by DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE89014602/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

With appropriate approximations, the delayed gamma dose rate problem can be formulated in terms of the effective delayed gamma production cross section. The coupled neutron-delayed-gamma transport equations then take the same form as the coupled neutron-prompt-gamma transport equations and they can, therefore, be solved directly in the same manner. This eliminates the need for the tedious and error prone flux coupling step in conventional calculations. Mathematical formulation and solution algorithms are derived. The advantages of this method are illustrated by an example of its application in the solution of a practical design problem. 62 refs., 10 figs., 1 tab.

37773 (SAND–88-3437C) **Interstage closure times for the rimfire multistage gas switch.** Turman, B.N.; Humphreys, D.R.; Richards, C.N. Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890665–18: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89013815/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The Rimfire multistage switch is a low-jitter SF_6 insulated gas switch that has been developed for PBFA II. The first stage is laser-triggered, and the subsequent stages are self-fired by the over-voltage from the closure of the triggered stage. The runtime of the 5 MV PBFA II switch is approximately 30 ns, and the standard deviation timing jitter is 1 ns. A Thomson streak camera and cylindrical imaging optics have been used to observe stage closure times, and a gated, single-frame camera recorded snapshots of the discrete arcs during the closure. These observations have shown that approximately half the switch closure time comes from the trigger and first self-break gap. The switch jitter is also dominated by these first gaps. Computer simulations, based on T.H. Martin's empirical gas breakdown model, agree with the experimental measurements, and give insight to the dynamics of the switch closure process. 9 refs., 8 figs., 2 tabs.

37774 (SAND–89-0007C) **Performance of plasma opening switches for the Particle Beam Fusion Accelerator II (PBFA II).** Rochau, G.E.; McDaniel, D.H.; Mendel, C.W.; Sweeney, M.A.; Moore, W.B.S.; Mowrer, G.R.; Simpson, W.W.; Zagar, D.M.; Grasser, T.; McDougal, C.D. Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890665–20: 7. Institute of Electrical and Electronics Engineers pulsed power conference, Monterey, California, USA, 12-14 Jun 1989). Order Number DE89013816/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

During 1987 and 1988, Plasma Opening Switch (POS) experiments have been continued with the goal of providing voltage and power gain on the PBFA II ion beam accelerator at Sandia National Laboratories. The experiments have developed a POS that has a rugged plasma source, will open rapidly, and will couple to a high-impedance load. The initial erosion switch design with improved plasma uniformity does not couple to these loads. Therefore, we have abandoned further development of this switch for voltage and power gain. Three alternate designs have been developed, tested, and are found to have better performance with the high-impedance loads. These new switches employ magnetic fields to control and confine the injected plasma. A summary of the switch configurations, their theory of operation, and the experimental results is presented and discussed. 4 refs., 10 figs.

37775 (SAND–89-0275C) **Development of the BOLVAPS [Boil-Off Lithium VAPor Source] lithium vapor source for the PBFA-II [Particle Beam Fusion Accelerator II] accelerator.** Dreike, P.L.; Appel, D.B.; Cap, J.S.; Gerstle, F.P.; Lamppa, K.P.; Mattox, D.M.; McCollister, H.L.; Moore, R.H.; Neilsen, M.K.; Peeples, C.R. Sandia National Labs., Albuquerque, NM (USA). 1989. 16p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890703–8: International conference on ion sources, Berkeley, California, USA, 9-15 Jul 1989). Order Number DE89014495/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A pulsed, large area, Li vapor source for use in the PBFA-II ion beam diode is described. BOLVAPS produces a 1–2 mm thick layer of Li vapor with a density approaching 1×10^{17} cm^{-3} by rapid ohmic heating of a thin film laminate, one layer of which contains Li. The principal design issues of the vapor source being built for use on the PBFA-II accelerator are described. Results of small-scale development experiments are summarized. 5 refs., 4 figs.

37776 (SAND–89-0354C) **Ion production on the PI-110A accelerator.** McKay, P.F.; Bieg, K.W.; Olson, R.E.; Pregenzer, A.L.; Wiemann, D.K. Sandia National Labs., Albuquerque, NM (USA). 1989. 17p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890703–4: International conference on ion sources, Berkeley, California, USA, 9-15 Jul 1989). Order Number DE89013064/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Lithium ion and proton source experiments have been performed using an extraction geometry Applied-B ion diode on the 0.02-TW PI-110A accelerator. These sources are being developed for use in Inertial Confinement Fusion (ICF). The proton source relies on surface flashover to form an anode plasma from which the protons are drawn. The lithium sources seem to depend upon the local electric field for operation. The applied electric field was enhanced in the experiment by the geometry of the anode surface. For the proton source, ion generation was reduced when the applied magnetic field was increased. By contrast, lithium ion generation continued to increase as the applied magnetic field was increased. The effect of anode temperature was investigated for two lithium sources and was found not to be a factor in ion generation. 13 refs., 3 figs.

37777 (SAND–89-0894C) **External ion beam analysis of the TFTR [Tokamak Fusion Test Reactor] bumper limiters.** Walsh, D.S.; Knox, J.M.; Doyle, B.L. Sandia National Labs., Albuquerque, NM (USA). 1989. 14p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8906161–2: Ion beam analysis conference, Kingston, Canada, 26-30 Jun 1989). Order Number DE89014136/JAW. Available from NTIS, PC A03/MF A01; OSIT; GPO Dep.

Following the 1988 operational campaign of the Tokamak Fusion Test Reactor (TFTR), 63 bumper limiter tiles were removed for analysis. Each tile was analyzed ex-vacuo for deuterium contamination. The total deuterium content was obtained using a new two-point approximation technique for exponential depth profiles. Several tiles were further analyzed to provide detailed two and three dimensional mapping and line scans down the sides of tiles for deuterium. Comparison of the deuterium data for the 1987 and 1988 campaigns indicates that deuterium deposition does not depend solely upon total integrated fueling. D fueling for the 1988 campaign was comparable to proposed fueling for future DT shot scenarios in TFTR. 1988 deuterium data lead to a tritium inventory estimate of ~3 gm T in the limiter of TFTR for this fueling level. Scans along the side edges of limiter tiles indicate that the edges retain high levels of deuterium and are thus an important factor in T inventory estimates. 6 refs., 4 figs.

37778 (SAND–89-1390C) **Electrohydrodynamically driven, large-area liquid metal ion source for inertial confinement fusion.** Pregenzer, A.L. Sandia National Labs., Albuquerque, NM

(USA). 1989. 16p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890703–2: International conference on ion sources, Berkeley, California, USA, 9-15 Jul 1989). Order Number DE89012665/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Analysis of the electrohydrodynamic (EHD) equations of motion of a planar liquid-lithium surface in the presence of a normal electric field suggest that liquid lithium may provide a large-area ion source for intense ion-beam diodes. Such sources are being developed for the Particle Beam Fusion Accelerator II at Sandia National Laboratories. In this paper, theoretical and experimental studies of the planar EHD ion source will be reviewed. When a planar liquid surface is subjected to an electric field of sufficient magnitude, EHD instabilities produce an array of cusps on the surface. The electric field enhancement at the apex of each cusp is sufficient to permit field evaporation of ions. The time delay between application of the electric field and ion emission depends on the magnitude and rate of increase of the applied electric field, and on the initial amplitude of the surface perturbation. Above 10 MV/cm, theory indicates that field emission will occur on a nanosecond time scale and that the characteristic spacing of emitters will be less than one micrometer. At these fields, the source should have an intrinsic divergence of less than 6 mrad and the effects of space charge from neighboring emitters should not inhibit emission significantly. Experimental measurements of wavelength and cusp-formation-times for water and ethanol at electric fields near the critical field for instability have agreed well with theory. 11 refs., 4 figs.

37779 (SAND–89-1495C) **Status of light ion approach inertial confinement fusion.** VanDevender, J.P. Sandia National Labs., Albuquerque, NM (USA). 1989. 10p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8906148–2: Fusion Power Associates annual meeting, Washington, DC, USA, 1-2 Jun 1989). Order Number DE89013567/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Personnel at Sandia National Laboratories, the Naval Research Laboratory, Cornell University, and Los Alamos National Laboratory are developing cost effective beams of lithium ions to bridge the energy gap between lasers and underground nuclear explosions in the national Inertial Fusion Program. We plan to probe the threshold for igniting thermonuclear fuel in the laboratory on the Particle Beam Fusion Accelerator II (PBFA II). We have met our April 1, 1989, milestone of 5 trillion watts per square centimeter power density on PBFA II. We wish to adapt the existing Hermes III accelerator at Sandia into a pre-prototype module of the DOE Laboratory Microfusion Facility for military applications in support of the DOE decision in the mid 90s on the best particle beam or laser for the facility. A German-American study concludes that our lithium ion approach offers the lowest cost option for fusion energy. 7 figs.

37780 (SAND–89-1522C) **Ion diode experiments on PBFA [Particle Beam Fusion Accelerator] II: Workshop on applications of high power switching.** Stinnett, R.W.; Lockner, T.R.; Johnson, D.J.; Coats, R.S.; Mehlhorn, T.A.; Desjarlais, M.P.; Bieg, K.W.; Pregenzer, A.L.; Woodworth, J.R.; Leeper, R.J. Sandia National Labs., Albuquerque, NM (USA). 1989. 20p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890796–1: International workshop on high power opening switches, Novosibirsk, USSR, 1-2 Jul 1989). Order Number DE89014177/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Ion diode research on Sandia National Laboratories' Particle Beam Fusion Accelerator (PBFA) II has progressed significantly during the past two years as we have operated in the shot-a-day model with well-diagnosed proton and lithium ion diode loads. During this period, we have succeeded in demonstrating efficient proton beam generation and in focusing the beam to a full width at half maximum (FWHM) spot size of 5.2 mm. Power and energy densities equivalent to 5.4 (+0.9, −0.8) TW/cm^2 and 73 kJ/cm^2, respectively, on a 6 mm diameter sphere from the full diode were obtained. Tests of ion diode operation with a simple Plasma Opening Switch (POS), opening at a current of 1-2 MA, indicate efficient energy coupling and a rapid turn on of iron when the POS opens. A model of diode operation has been developed which successfully describes the operating impedance of applied-B ion diodes on PBFA II, PBFA I, Proto II, and Proto I. In addition, we have developed the capability to perform particle simulations which have helped to determine optimized insulating magnetic field profiles and anode shapes for efficient ion beam generation and focusing. Lithium ion source experiments on PBFA II have succeeded in delivering 26 kJ of lithium ions to the axis using a field-enhanced LiF ion source. Several active lithium ion sources, which should allow improved lithium began generation and focusing, are now being prepared for testing on PBFA II. 11 refs., 10 figs., 2 tabs.

37781 (UCRL–101023) **Chiral organic crystals for high power frequency conversion.** Davis, L.E.; Velsko, S.P.; Eimerl, D. Lawrence Livermore National Lab., CA (USA). 5 May 1989. 8p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8809364–1: Sessions on materials processing in space, Chicago, IL, USA, 25-28 Sep 1988). Order Number DE89013791/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Water soluble organic salts comprise a class of crystalline materials containing many efficient harmonic generators for high power lasers. Statistical studies of the simple chiral salts reveal that approximately ten percent have nonlinearities similar to or better than potassium dihydrogen phosphate, the material most commonly used for high power frequency conversion. Furthermore, high damage thresholds (> 40 J/cm^2 at 1.06 μm) have been demonstrated in 1-arginine phosphate which is a representative crystal from this class. Simple chiral salts have ultraviolet cutoff wavelengths of 200–500 nm, and this, together with the fact that many are very birefringent, implies that phasematching over a wide range of wavelengths should be possible. In particular, this class of materials may be expected to contain efficient harmonic generators of blue and ultraviolet light. Finally, very large single crystals (>1000 cm^3) of many of these water soluble materials can be grown, making the fabrication of large aperture frequency conversion devices possible. 15 refs.

37782 (UCRL–101266) **Multi-segment Nd:Glass disk amplifiers.** Murray, J.E.; Erlandson, A.C.; Frick, F.A.; Jancaitis, K.S.; Hurley, C.E.; Powell, H.T. Lawrence Livermore National Lab., CA (USA). 6 Jun 1989. 22p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890423–11: CLEO '89: conference on lasers and electro optics, Baltimore, MD, USA, 24-28 Apr 1989). Order Number DE89014043/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Initial designs of a multi-megajoule laser system call for compact, segmented aperture disk amplifiers which are substantially different from conventional amplifiers. We have experimentally investigated several of the new issues introduced by these amplifiers. 2 refs., 1 fig.

37783 Spacecraft charging potential during electron-beam injections into space plasmas. Lin, C.S. (Dept. of Space Sciences, Southwest Research Institute, San Antonio, TX (US)). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 205-209 (Apr 1989).

Injections of nonrelativistic electron beams from an infinite conductor have been simulated by using a two-dimensional electrostatic particle code to study the spacecraft charging potential. The simulations show that the conductor charging potential at the end of simulations does not vary with the beam density when the beam density exceeds four times the ambient density. The reflection coefficient, which determines a percentage of incident electrons reflected by the conductor, increases the charging potential. To charge the conductor to the beam energy, the reflection coefficient needs to be about 0.5. The results are applied to explain the spacecraft charging potential measure during the SEPAC experiments from Spacelab 1.

37784 Axisymmetric particle-in-cell simulations of diamagnetic-cavity formation in vacuum. Gisler, G. (Space Plasma Physics ESS-8, Los Alamos National Lab., Los Alamos, NM (US)). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 210-219 (Apr 1989).

Axisymmetric simulations of the expansion of a hot plasma suddenly introduced into a vacuum containing a weak magnetic field were performed using an electromagnetic particle-in-cell code. Both uniform and gradient fields have been used, with the simulation axis along the principle field direction. The formation of a diamagnetic

cavity requires an initial plasma $\beta > 1$; as the expansion proceeds, β diminishes, and the field eventually recovers. The maximum spatial extent of the cavity and its duration can be obtained from simple dynamical considerations. Field-aligned ion acceleration behind the electron front is observed in all field geometries and strengths. In the case of expansion into a divergent field, the plasma is found to move down the field gradient by ambipolar diffusion. These simulations are relevant to active release experiments in the Earth's magnetosphere, to pellet ablation experiments, and to the naturally occurring diamagnetic bubbles observed at the Earth's foreshock.

37785 The dynamics of charged particles in the near wake of a very negatively charged body. Morgan, M.A. (Northeastern Univ., 235 Forsyth Bldg., Boston, MA (US)); Chan, C.; Cooke, D.L.; Tautz, M.F. *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science (USA),* 17(2): 220-227 (Apr 1989).

A numerical simulation that is cylindrical in configuration space and 3-D ($upsilon_x$, $upsilon_y$, $upsilon_z$) in velocity space has been initiated to test a model for the near-wake dynamics of a very negatively charged body. The simulation parameters were closely matched to those of a laboratory experiment so that the results may be compared directly. It was found from the laboratory study that the electrons and ions can display different temporal features in the filling-in of the wake; and that they both can be found in the very near-wake region (within one body diameter) of an object with a highly negative body potential. The authors have also found that the temperature of the electrons in the very near wake could be somewhat colder than the ambient value, suggesting the possibility of a filtering mechanism being operative there. The simulation results to data largely corroborate the density findings in terms of the presence of an enhancement for both ions and electrons and in its location. There is reason to think too that additional agreements can be realized if two key elements - the inclusion of a 2-component, source electron distribution in the simulation and an understanding of the perturbation imposed by the diagnostic probe itself on the experiment - can be achieved. This is an ongoing process. Results from both the laboratory experiment and the numerical simulation are presented, and a model that accommodates these findings is discussed.

37786 (CNEA-NT–6/88) **Summary of activities of the Research Department 1984.** Comision Nacional de Energia Atomica, Buenos Aires (Argentina). 18 May 1989. 109p. (In Spanish). Order Number DE89620470/JAW. Available from NTIS (US Sales Only), PC A06/MF A01 - OSTI; INIS.

This annual report of the Research Department describes the activities performed during 1984 in the following fields: Physics, Reactor Chemistry, Radiobiology, Prospective and Special Studies, Biomathematics, Labelled Molecules and Radiochemistry. During this period the first heavy ion beam in the accelerator Tandar was obtained. A list of publications made by the Department this year is enclosed. (M.E.L.).

37787 (CONF-8902105–Summs.) **Proceedings of the DOE quality conference: Managing for quality in a changing environment.** USDOE Assistant Secretary for Environment, Safety, and Health, Washington, DC (USA). Office of Quality Programs. 1989. 258p. Sponsored by DOE Environment Health & Safety. From DOE quality conference: managing for quality in a changing environment; Albuquerque, New Mexico, USA; 14-16 Feb 1989. Order Number DE89012866/JAW. Available from NTIS, PC A12/MF A01 - OSTI.

The purpose of the conference was to effect change and improve safety and quality of DOE operations by providing managers with lessons learned from DOE and industry experiences. It also addressed new efforts in quality verification and the need for changing the quality culture within DOE. There was excellent response to the call for the DOE Quality Conference. Approximately 170 representatives from DOE Headquarters, operations offices, and contractors supported the overall conference and associated workshops. Almost 25% of these participants were line managers. The conference consisted of presentations and discussions revolving around four areas of interest: (1) the initiatives taken by the Department of Energy/Office of the Assistant Secretary for Environment, Safety and Health (DOE/EH) to achieve safety and quality; (2) methods employed by commercial organizations to achieve higher levels of quality; (3) lessons learned within DOE and commercial activities for safety and quality; and (4) initiatives for institutionalizing quality assurance (QA) at DOE laboratories. Four workshops were also conducted on topics suggested by the conference organizing committee.

37788 (INIS-mf–11449) **Tenth working group meeting of representatives of RCA Member States. Report.** International Atomic Energy Agency, Vienna (Austria). Apr 1989. 235p. (CONF-8804284–: 10. working group meeting of representatives of RCA Member States, Beijing, China, 11-14 Apr 1988). Order Number DE89620463/JAW. Available from NTIS (US Sales Only), PC A11/MF A01 - OSTI; INIS.

The Tenth RCA (Regional Co-operative Agreement for Research, Development and Training Related to Nuclear Science and Technology) Working Group meeting of representatives of RCA Member States was held at the Chinese Academy of Agricultural Sciences, Beijing, between 11-14 April 1988. The report on the meeting consists of a presentation of the seven technical sessions which dealt with topics such as nuclear techniques in industry, agriculture and medicine, nuclear power and of the project reports under RCA.

37789 (SAND–89-1029C) **Advanced Small Site Program.** Ringler, C.E. Sandia National Labs., Albuquerque, NM (USA). 1989. 6p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890736–17: 30. annual meeting of the Institute of Nuclear Materials Management, Orlando, Florida, USA, 9-12 Jul 1989). Order Number DE89014486/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Development of the Advanced Small Site Program (ASSP) will satisfy the requirement for a small to medium sized security system uses commercially available, low cost, state-of-the-art technology to enhance its performance. The system addresses all aspects of technical security. These aspects include control and display; perimeter and interior sensors; data and video transmissions; video assessment; reduced installation, operation, and maintenance costs. Major system features include use of multi-level graphics with touchscreen inputs to control all sensor and video functions. An optional feature allows the use of fiber optics for data or video transmissions. Integration of functional components into modular sub-systems eases the task of expanding, maintaining, and operating the system. The system's automatic restart function permits a fully loaded system to configure itself in less than ten minutes. Site personnel will be able to create and modify a configuration data file of the site. The ASSP software uses this file data to run its programs. The configuration file contains the number of sensors, sectors, buildings, cameras, sensor thresholds, sensor priorities,and other site specific information. An off-line program obtains this information through a series of queries to the site personnel. This information is written to a data configuration file. This paper describes the functions and integration of this system. 11 figs.

37790 (SAND–89-1108C) **Effective implementation of safeguards and security requirements.** Schumann, M.; Hofferth, L.J.; Trujillo, A.A. Sandia National Labs., Albuquerque, NM (USA). 1989. 5p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890736–18: 30. annual meeting of the Institute of Nuclear Materials Management, Orlando, Florida, USA, 9-12 Jul 1989). Order Number DE89014480/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Effective implementation of an insider protection program in light of the new directives can be accomplished through sound planning and a strong management commitment to meaningful improvements. Good planning, with a firm set of goals and objectives that have reasonable milestones, are essential elements in the effective implementation of new requirements. This paper describes a structured approach to achieving effective and acceptable program implementation.

37791 (SAND–89-1109C) **Demonstrations of a real time personnel and material tracking system.** Trujillo, A.A.; Hoover, C.E. Sandia National Labs., Albuquerque, NM (USA). 1989. 4p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890736–15: 30. annual meeting of the Institute of Nuclear Materials Management, Orlando, Florida, USA, 9-12 Jul 1989). Order Number DE89013810/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Past experience in addressing the insider threat has led to the development of general principles for mitigating the insider threat while minimizing adverse impacts on site operations. Among the general principles developed was the requirement for real time tracking of personnel and material. A real time system for personnel and material tracking will aid in mitigating the insider threat by providing critical information regarding the movement and location of personnel and material. In addition, this system can provide an early detection mechanism for potential insider actions. This paper describes the development, operation, and performance of a technology-based system which utilizes radio frequency transmitters to achieve the real time tracking of personnel and material. The major elements of this system are personnel tracking credential which cannot be removed from an authorized individual without an alarm being sounded, and material control device which is utilized to control and monitor access to material. These elements form an insider protection system through the use of software which establishes the "rules" under which the system will operate. The performance of this system has been evaluated under both laboratory and operational settings in order to: (1) demonstrate the system's ability to successfully control access to material and areas by personnel, and (2) provide information regarding the status of materials in transit and storage. 3 refs., 1 fig.

37792 (SAND–89-1609C) **An evaluation of the polyester/polyethylene badge packet as an identification card.** Wright, L.J. Sandia National Labs., Albuquerque, NM (USA). Jul 1989. 8p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890736–22: 30. annual meeting of the Institute of Nuclear Materials Management, Orlando, Florida, USA, 9-12 Jul 1989). Order Number DE89014493/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

With the advent of automated photographic badge making systems and automated access control systems, the need for new badge making strategies has become evident. In order to determine the suitability of the polyester/polyethylene badge packet for application to both the currently widely used Polaroid (TM) photographic process and the emerging automated photographic badge making process, Sandia National Laboratories procured samples of this type of badge packet from four different suppliers and evaluated them. The evaluation packet was designed to accommodate either process as well as an automated access control system (in this case, a system based on magnetic stripe technology). The evaluation consisted of environmental, mechanical, chemical and magnetic tests to determine reliability and durability. These tests included a flex test at −20°F, 76°F and 125°F; a washing machine test; a magnetic stripe wear test; an outdoor test; and a high magnetic field exposure test. These tests were designed to simulate conditions the badge might encounter during normal use. 5 tabs.

37793 (TVA/PUB–88/18) **Office of the Inspector General: Semiannual report, October 1, 1988–March 31, 1989.** Tennessee Valley Authority, Knoxville, TN (USA). 30 Apr 1989. 62p. Sponsored by Tennessee Valley Authority. Order Number DE89014205/JAW. Available from NTIS, PC A04/MF A01 - OSTI.

This is the sixth Semiannual Report for the Office of the Inspector General (OIG). It summarizes our major activities and accomplishments from October 1, 1988 to March 31, 1989. During this reporting period, we issued 24 final audit reports and identified more than $7.7 million in questioned costs and $22.5 million in funds that could be put to better use. We also issued 169 formal investigative reports and 6 project reports to TVA management and referred over 80 matters to federal or state prosecutors or other government officials. A number of our investigations – particularly those involving workers' compensation benefits – have demonstrated their cost-savings potential. For example, this report describes OIG investigations that may ultimately save TVA more than $2.2 million in avoided workers' compensation benefits. Because we focus on ways to improve TVA programs and operations, we may also identify instances of questionable conduct, needed improvements, or opportunities for positive change. However, any shortcomings identified in this report should not be viewed as characteristic of all TVA operations or as a representative of TVA employees generally. Moreover, as a careful reading of this report will confirm, a significant number of our audits, investigations, and other activities reach conclusions that are generally favorable to TVA management and employees.

37794 (AD-A–204860/1/XAB) **Randomized parallel branch-and-bound algorithm.** Janakiram, V.K.; Agrawal, D.P.; Mehrotra, R. North Carolina State Univ., Raleigh, NC (USA). 1988. 9p. Available from NTIS, PC A02/MF A01.

Pub. in Proceedings of the International Conference on Parallel Processing, 69-75(1988).

A new technique for the parallel execution of branch-and-bound algorithms using randomization is proposed. The algorithm requires relatively little inter-processor communication, while achieving good speedups over the uniprocessor execution times; in precisely those cases where the problem size becomes very large, randomization is found to be extremely successful in achieving very good speedups. A probabilistic model was devised to explore the effectiveness of this technique, and to estimate the expected speedups that could be obtained. The model was validated by extensive simulation work on a multiprocessor simulator. Besides being very simple to implement, the technique also ensures high reliability, flexibility, and fault tolerance.

37795 (AD-A–204907/0/XAB) **Expert systems on multiprocessor architectures. Phase 1. Final report, March 1985-July 1987.** Feigenbaum, E.A.; Engelmore, R.S. Stanford Univ., CA (USA). Knowledge Systems Lab. Aug 1988. 325p. Available from NTIS, PC A14/MF A01.

The military has a demonstrated need for knowledge-based systems with significantly higher quantitative performance. The current hardware and software architectures for knowledge-based systems cannot support such requirements. Based on near-term projections for integrated-circuit technologies, it is clear that highly parallel multiprocessor computers consisting of 100s to 1000s of processors and realizing a variety of concurrent architectures can be built. The most-promising approach for achieving orders of magnitude improvement in the quantitative performance of knowledge-based systems is by exploiting concurrency on multiprocessor systems. The major issue is whether such computer systems can be effectively used to enhance the performance of knowledge-based systems. Expert systems on Multiprocessor Architectures project is addressing the following questions: (1) Can multiprocessor computers be used to achieve significant execution speedup (two to three orders of magnitude) over serial machines for knowledge-based system applications. (2) What are the limiting factors in achieving speedup for such systems. (3) What are appropriate software models and methodologies for programming such systems. (4) What are appropriate hardware architectures for supporting such systems. Given the lack of any formal foundations for studying concurrent knowledge-based systems, the approach taken to answering these questions is empirical rather than theoretical.

37796 (AD-A-204915/3/XAB) **Parallel problem-solving system, PRISM (Parallel Inference System). Final report, November 1986-February 1988.** Minker, J. Maryland Univ., College Park, MD (USA). Dept. of Computer Science. 19 Apr 1988. 12p. Available from NTIS, PC A03/MF A01.

A parallel problem-solving system, PRISM (Parallel Inference System), that was implemented on the VAX/11-780, the PYRAMID and SUN machines, was ported successfully to McMOB and then to the BBN Butterfly parallel architecture. The McMOB architecture is essentially the ZMOB architecture with 16 Motorola 68000 processors, upgrading the Z80A microprocessors, interconnected in a ring structure. Experimental testing of PRISM on McMOB was undertaken. In addition, several enhancements were made to PRISM to permit experimental analyses to be made, and to incorporate additional features to take full advantage of parallelism in a problem-solving environment. The tracing and statistical gathering packages were extended. An ability to display AND-parallelism was added to the trace program, which displays the execution of a program on the parallel machines. Heuristic techniques were developed to determine which information to display to a user. The system software for ZMOB/McMOB is now robust and considered completed. This has allowed the author to re-emphasize studies on parallel software. A new formalism for slicing/splicing was developed that eliminates much of the run-time overhead of the technique, allowing for the development of a splicing compiler. Work has also focused on the development of debugging tools for parallel software and the integration of artificial-intelligence techniques into debugging software.

37797 (AD-A-205184/5/XAB) **Developing software to use parallel processing effectively. Final report, June-December 1987.** Center, J. Dynamics Research Corp., Andover, MA (USA). Oct 1988. 199p. Available from NTIS, PC A09/MF A01.

This report describes the difficulties involved in writing efficient parallel programs and describes the hardware and software support currently available for generating software that utilizes processing effectively. Historically, the processing rate of single-processor computers has increased by one order of magnitude every five years. However, this pace is slowing since electronic circuitry is coming up against physical barriers. Unfortunately, the complexity of engineering and research problems continues to require ever more processing power (far in excess of the maximum estimated 3 Gflops achievable by single-processor computers). For this reason, parallel-processing architectures are receiving considerable interest, since they offer high performance more cheaply than a single-processor supercomputer, such as the Cray.

37798 (CONF-890744-2) **A virtual zero-time, monolithic systolic sorting array.** Britton, C.L.; Ericson, M.N.; Bouldin, D.W. Oak Ridge National Lab., TN (USA). 1989. 12p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From VLSI education conference and exposition; Santa Clara, California, USA; 19-21 Jul 1989. Order Number DE89007515/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A virtual zero-time monolithic sorting chip is described. The chip has a systolic array architecture and implements the "sinking sort" algorithm. The basic functional module of the systolic array is detailed and development techniques employed as well as functional simulation and results are presented. Lessons learned and educational significance of the development of this chip at a university are discussed. 3 refs., 4 figs.

37799 (CONF-8906112-1) **Chaotic behavior in a new class of parallel optimization algorithms.** Culioli, J.C.; Protopopescu, V.; Mann, R.C. Oak Ridge National Lab., TN (USA). 1989. 11p. Sponsored by DOD;DOE/DP. DOE Contract AC05-84OR21400. From 7. symposium on energy engineering sciences; Argonne, Illinois, USA; 19-21 Jun 1989. Order Number DE89014069/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A new class of optimization algorithms for linear and nonlinear problems is proposed. The algorithms are based on sigmoidic updatings and can be looked upon as nonlinear multidimensional maps. The bifurcation and chaotic regimes of these maps are analyzed and their possible application to optimization problems are indicated. 9 refs., 3 figs.

37800 (CONF-8906150-1) **Electronic communication and data transfer productivity enhancements.** Truett, T.; Stevens, S. Oak Ridge National Lab., TN (USA). 1989. 12p. Sponsored by DOE Energy Research. DOE Contract AC05-84OR21400. From 3. international conference on microcomputers in transportation; San Francisco, California, USA; 21-23 Jun 1989. Order Number DE89013542/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Transportation projects can be small, local efforts or large, multisited ventures. For these large projects, electronic mail and data transfer are not merely productivity aids; they are indispensable components of success. Electronic communication via microcomputers is quick and convenient and provides documented evidence of the communication. The rapid exchange of cost data, routing data, plans and scheduled, and information on the availability of transportation equipment and personnel ensures maximum use of transportation assets and provides responsiveness to customer requests for transportation services. Large ventures operating from widely separated sites cannot depend on local area networks for their communication requirements, as can small, single-sited projects. Not all projects have access to established communication networks such as BITNET (used widely by universities) or DDN (the Defense Data network). In addition, transportation efforts that involve several diverse agencies such as the federal government, local officials, public utilities, industry, or the private sector have special communication requirements. This paper focuses on criteria for choosing an appropriate microcomputer based communication mechanism. Emphasis is placed on determining communication requirements and ranking the importance of system characteristics. Advantages and limitations of three distinct system configurations are discussed in nontechnical terms. 13 refs., 1 tab.

37801 (CTA-EAv-FTE-022/81) **ECIS - Adaptation to CDC CYBER system.** Nair, R.P.K.; Rego, R.A.; Lemos, B.J.K.C. Centro Tecnico Aeroespacial, Sao Jose dos Campos, SP (Brazil). Inst. de Atividades Espaciais. 30 Nov 1981. 11p. (In Portuguese). Order Number DE89620447/JAW. Available from NTIS (US Sales Only), PC A03/MF A01 - OSTI; INIS.

The implantation of ECIS computer code, elaborated for BOURROUGHS 6700 computer of USP (Universidade de Sao Paulo), in the CDC CYBER 170/730 computer is presented. The ECIS code calculates cross section by coupled channel method. Some problems were calculated to verify the compactibility of results obtained from BOURROUGHS 6700 version with the version. The problems calculated by new version and the carried out modifications, are described (M.C.K.).

37802 (DOE/ER/25026-31) **Asynchronous integration of ordinary differential equations on multiprocessors.** Aslam, S.; Gear, C.W. Illinois Univ., Urbana, IL (USA). Dept. of Computer Science. Jul 1989. 31p. Sponsored by DOE Energy Research. DOE Contract FG02-87ER25026. (UIUCDCS-R-89-1525;UILU-ENG-89-1744). Order Number DE89014169/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Asynchronous Iterations Methods have been shown to offer significant speedups in multiprocessing environments for the class of iterative methods $x = F(x)$. For a system of equations, parallel implementation on a multiprocessor with no minimal synchronization between cooperating processes yields the most advantage. Picard or Picard-like iteration schemes for solving Ordinary Differential Equations (ODEs) fall into such a class of iterative methods. The Picard method computes a sequence of successive approximation $y^n(t)$ to the exact solution $y(t)$ of the Initial Value Problem (IVP) $\dot{y} = f(t,y)$, $y(t_0) = y_0$, where $\dot{y} = dy/dt$. Starting with $y^0 = y(t_0)$, it can be shown that this sequence converges to the true solution $y(t)$ of the IVP. We have developed an asynchronous iterative procedure that performs such an integration in a multiprocessor environment. For a given system of n IVP, each component $\dot{y}t = f_i(t, y_1, y_2, \cdots, y_n)$ is integrated any time any of the y_j, $j \neq i$ gets updated. No synchronization other than this is maintained amongst the components. The algorithm has been implemented on an Encore Multimax which is a multiprocessor shared-memory machine. The computer code is designed to solve a given system of ODEs. The user interface to the code is similar to traditional ODEs solvers. We present a preliminary report on results obtained. 5 refs.

37803 (DOE/PE/70411–T2) **User's guide to CONVEST.** Graves, K.; Gaynor, W. Pechan (E.H.) and Associates, Inc., Springfield, VA (USA). Apr 1985. 66p. Sponsored by DOE Management & Administration. DOE Contract AC01-84PE70411. Order Number DE89014518/JAW. Available from NTIS, PC A04/MF A01 - OSTI.

CONVEST consists of a data entry and edit module – CONVEST – and a computation module – CONEVAL. The CONVEST model is referred to herein as CONVEST, as distinct from the CONVEST module, one of its components. The CONVEST model is designed to allow institutional energy managers to perform a rapid evaluation of alternative financing arrangements for the installation of capital improvements for energy conservation.

37804 (IPPJ-DT–144) **Experimental data processing techniques by a personal computer.** Matsuura, Kiyokata; Tsuda, Kenzo; Abe, Yoshihiko; Kojima, Tsuyoshi; Nishikawa, Akira; Shimura, Hitoshi; Hyodo, Hiromi; Yamagishi, Shigeru. Nagoya Univ. (Japan). Inst. of Plasma Physics. Jan 1989. 194p. (In Japanese). Order Number DE89790928/JAW. Available from NTIS (US Sales Only), PC A09/MF A01.

A personal computer (16-bit, about 1 MB memory) can be used at a low cost in the experimental data processing. This report surveys the important techniques on A/D and D/A conversion, display, store and transfer of the experimental data. It is also discussed the items to be considered in the software. Practical softwares programed BASIC and Assembler language are given as examples. Here, we present some techniques to get faster process in BASIC language and show that the system composed of BASIC and Assembler is useful in a practical experiment. The system performance such as processing speed and flexibility in setting operation condition will depend strongly on programming language. We have made test for processing speed by some typical programming languages; BASIC(interpreter), C, FORTRAN and Assembler. As for the calculation, FORTRAN has the best performance which is comparable to or better than Assembler even in the personal computer.

37805 (LA–11614-MS) **Lessons learned in the DOE Computer Security Enhancement Review Program.** Hunteman, W.J. Los Alamos National Lab., NM (USA). Jul 1989. 28p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. Order Number DE89014164/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

During the last 4 years, DOE has made the most detailed and extensive computer security self-evaluation of any US government organization. The breadth and depth of the examination have revealed some problems. Few of the problems are major; most are procedural, some administrative, a few technical, and almost none systemic. This report documents the lessons learned from one part of the evaluation process.

37806 (LA-UR–89-2087) **Numerical simulation of plasma opening switches.** Mason, R.J.; Jones, M.E.; Bergman, C.D. Los Alamos National Lab., NM (USA). 1989. 13p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890710–8: 5. international conference on megagauss magnetic field generation and related topics, Novosibirsk, USSR, 3-7 Jul 1989). Order Number DE89014296/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Plasma Opening Switches have been examined numerically with the aid of the ANTHEM plasma simulation model. A generic bicylindrical switch is studied. The switching of generator pulses ranging from 50 ns to 1 μsec is reviewed, for a variety of plasma fill lengths and densities, and for a range of resistive loads. 7 refs., 9 figs.

37807 (LA-UR–89-2130) **Los Alamos Center for Computer Security formal computer security model.** Dreicer, J.S.; Hunteman, W.J.; Markin, J.T. Los Alamos National Lab., NM (USA). 1989. 7p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-890736–26: 30. annual meeting of the Institute of Nuclear Materials Management, Orlando, Florida, USA, 9-12 Jul 1989). Order Number DE89014221/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

This paper provides a brief presentation of the formal computer security model currently being developed at the Los Alamos Department of Energy (DOE) Center for Computer Security (CCS). The need to test and verify DOE computer security policy implementation first motivated this effort. The actual analytical model was a result of the integration of current research in computer security and previous modeling and research experiences. The model is being developed to define a generic view of the computer and network security domains, to provide a theoretical basis for the design of a security model, and to address the limitations of present formal mathematical models for computer security. The fundamental objective of computer security is to prevent the unauthorized and unaccountable access to a system. The inherent vulnerabilities of computer systems result in various threats from unauthorized access. The foundation of the Los Alamos DOE CCS model is a series of functionally dependent probability equations, relations, and expressions. The model is undergoing continued discrimination and evolution. We expect to apply the model to the discipline of the Bell & LaPadula abstract sets of objects and subjects. 6 refs.

37808 (ORNL/TM–10714) **ORMONTE: An uncertainty analysis code for use with user-developed systems models on mainframe or personal computers: A user's guide.** Williams, K.A.; Hudson, C.R. II. Oak Ridge National Lab., TN (USA). May 1989. 196p. Sponsored by DOE Defense Programs. DOE Contract AC05-84OR21400. Order Number DE89013730/JAW. Available from NTIS, PC A09/MF A01 - OSTI; GPO Dep.

Documentation is provided for a general purpose uncertainty analysis code entitled ORMONTE. The code is intended to be linked with FORTRAN-77 models designed by the user. ORMONTE is capable of performing sequential single-variable sensitivity studies (SVSS), elasticity analyses, and multivariable sensitivity studies (MVSS) by acting as a driver on the user's model. The MVSS function utilizes the Monte Carlo simulation method of probabilistic analysis. The model accessed by the ORMONTE driver code and the names and characteristics of the modeler's uncertain variables are provided by the user. ORMONTE is essentially a bookkeeping code which keeps track of inputs and outputs defined by the user, samples the user-defined uncertainty distributions, repeatedly runs the user's model, and produces statistical data and output probability histograms for the output variables of interest to the user. ORMONTE has been utilized extensively by the USDOE and its Oak Ridge contractors, Martin Marietta Energy Systems Inc., and its predecessor, Union Carbide Corp.; Nuclear Division, for the economic evaluation of large-scale energy projects for which computer models have been constructed for performance and cost projection purposes. ORMONTE has been used on several computer systems including a Cray, several VAXes, two IBM-360 mainframes, and DOS compatible PCs (along with the appropriate FORTRAN-77 software). The detail documentation provided here deals mainly with the PC version to be utilized with RM/FORTRAN; however, installation on a mainframe is reasonably simple. An example problem and complete ORMONTE input and output therefrom are provided. 3 refs., 24 figs., 6 tabs.

37809 (SAND–88-3041C) **Computer site threat identification and analysis.** Clever, J.J. Sandia National Labs., Albuquerque, NM (USA). 1989. 25p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-8905149–1: Digital Equipment Computer Users Society symposium, Atlanta, Georgia, USA, 8-12 May 1989). Order Number DE89013495/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

A major early milestone in achieving a sound comprehensive computer security posture for a given site is the identification of both potential and actual threats, a necessary step in a framework for the overall site risk assessment process. This report addresses some considerations in identifying and differentiating among threats, agents which accomplish threats, and threat impacts. It includes some general rank/order modeling approaches to support a threat analysis and to provide input to a following risk analysis. 22 refs., 10 figs.

37810 (SAND–88-3089C) **Using conjoint meshing primitives to generate quadrilateral and hexahedral elements in irregular regions.** Stephenson, M.B.; Blacker, T.D. Sandia National Labs., Albuquerque, NM (USA). 6 Jan 1989. 33p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890741–1: ASME international computers in engineering conference, Anaheim, California, USA, 30 Jul - 2 aug 1989). Order

Number DE89005918/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

The parameter-space mapping technique used in most finite element mesh generation programs requires that the geometry be subdivided into either rectangular areas in 2-D or rectilinear volumes in 3-D to produce, respectively, quadrilateral or hexahedral elements. Since subdivision occurs in parameter space, the edges bounding the areas and volumes need not be straight or parallel lines. Simple geometries may be subdivided easily while irregular features challenge the analyst. This paper presents the formulation and application of conjoint meshing primitives that assist the analyst in meshing in and around irregular features. The term conjoint is applied to these primitives because each is composed of several rectangular areas or rectilinear volumes. Interval assignments may vary from side to side, within a set of constraints, for each primitive. Thus, all of them are useful for transitions between other regular areas or volumes. In 2-D, the primitive areas are the triangle, pentagon, semi-circle, circle, and rectangular transition. These primitives are implemented in the Sandia meshing program FASTQ and are used in regular production work. They are also the basis for decomposition regions in the developing artificial intelligence Automated Meshing Knowledge System, AMEKS. In 3-D, the primitive volumes are the 2-D primitives extended in depth together with the tetrahedon and two rectilinear transition volumes. These primitives are the foundation for extending AMEKS to 3-D. 9 refs., 14 figs.

37811 (SAND–89-0008) **ELLIPSE user's manual and program reference.** Tardy, H.L. Sandia National Labs., Albuquerque, NM (USA). Mar 1989. 125p. Sponsored by DOE Energy Research. DOE Contract AC04-76DP00789. Order Number DE89014575/JAW. Available from NTIS, PC A07/MF A01 - OSTI; GPO Dep.

A new program, ELLIPSE, for the analysis of ellipsometric data is described. The program is interactive and includes on-line help, performs explicit error analysis for single-angle-of-incidence measurements, allows the input of four-zone null data, and performs least-squares analysis of multiple-angle-of-incidence data. Solutions for the transparent-film-on-substrate model are obtained using decoupled equations for film thickness and index. No initial guess is required for thickness, and the algorithm is insensitive to the initial guess for film index. This document combines the user's manual and program description for ELLIPSE, and includes several examples of its use. 11 refs.

37812 (SAND–89-1575C) **A solid state video recorder as a direct replacement of a mechanically driven disc recording device in a security system.** Terry, P.L. Sandia National Labs., Albuquerque, NM (USA). 1989. 11p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-890736–6: 30. annual meeting of the Institute of Nuclear Materials Management, Orlando, FL, USA, 9-12 Jul 1989). Order Number DE89014780/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Whether upgrading or developing a security system, investing in a solid state video recorder may prove to be quite prudent. Even though the initial cost of a solid state recorder may be more expensive, when comparing it to a disc recorder it is practically maintenance free. Thus, the cost effectiveness of a solid state video recorder over an extended period of time more than justifies the initial expense. This document illustrates the use of a solid state video recorder as a direct replacement. It replaces a mechanically driven disc recorder that existed in a synchronized video recording system. The original system was called the Universal Video Disc Recorder System. The modified system will now be referred to as the Solid State Video Recording System. 5 figs.

37813 (UCRL–100959) **A MACSYMA package for the generation and manipulation of Chebyshev series.** Einwohner, T.H.; Fateman, R.J. Lawrence Livermore National Lab., CA (USA). 19 Apr 1989. 13p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-890779–1: International symposium on symbolic and algebraic computing, Portland, Oregon, USA, 17-19 Jul 1989). Order Number DE89011404/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

Techniques for a MACSYMA package for expanding an arbitrary univariate expression as a truncated series in Chebyshev polynomials and manipulating such expansions is described. A data structure is introduced to represent a truncated expansion in a set of orthogonal polynomials. The data structure contains the independent variable, the name of the orthogonal polynomial set, the number of terms retained, and a list of the expansion coefficients. Although we restrict attention here to the set of Chebyshev polynomials as the orthogonal set, extension to other orthogonal polynomials will be done later. A data structure for truncated power series is provided as an alternative. The principal function of the package converts a given expression into the aforementioned data structure. Special cases are the conversion of sums, products, the ratio, or the composition of truncated Chebyshev expansions. 12 refs.

37814 (UCRL–101034) **Cray-to-sun prototype.** Requa, J. Lawrence Livermore National Lab., CA (USA). 26 Apr 1989. 8p. Sponsored by DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-8904210–6: Cray user's group conference, Los Angeles, California, USA, 24-28 Apr 1989). Order Number DE89013087/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The Cray-to-Sun prototype is an experiment in providing an in-the- office graphics tool using the LINCS architecture developed at LLNL. It represents one of our first attempts at developing a true distributed application utilizing the number crunching power of the Cray and the interactive and graphics capabilities of the Sun workstation. 3 refs., 3 figs.

37815 (UCRL–101237) **Problems and solutions in online documentation systems.** Shuler, J. Lawrence Livermore National Lab., CA (USA). Jun 1989. 5p. Sponsored by DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-8904210–7: Cray user's group conference, Los Angeles, CA, USA, 24-28 Apr 1989). Order Number DE89014092/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

Pogo says "We are surrounded by insurmountable opportunities." DOCUMENT, the online document system at NMFECC, has been continually enhanced and modified in the past 12 years to meet customer needs by analyzing the "insurmountable opportunities" (commonly called problems) that have arisen. We have analyzed where these documentation retrieval problems exist and solved these problems. The greatest challenge was to provide the customer with a stable system using the existing database of documents while adding new features and programs to retrieve information. I will list four of the problems we have encountered, give the solutions and show some indicators of success.

37816 Intelligent robotics and remot systems for the nuclear industry. Wehe, D.K. (Michigan Univ., Ann Arbor (USA). Dept. of Nuclear Engineering); Lee, J.C.; Martin, W.R.; Mann, R.C.; Hamel, W.R.; Tulenko, J. *Nuclear Engineering and Design (Netherlands),* 113(2): 259-267 (Apr 1989). (CONF-870832–: Topical meeting on artificial intelligence and other innovative computer applications in the nuclear industry: present and future, Snowbird, Utah, USA, 31 Aug - 2 sep 1987).

The nuclear industry has a recognized need for intelligent, multitask robots to carry out tasks in harsh environments. From 1986 to the present, the number of robotic systems available or under development for use in the nuclear industry has more than doubled. Presently, artificial intelligence (AI) plays a relatively small role in existing robots used in the nuclear industry. Indeed, the lack of intelligence has been labeled the "Achilles heel" of all current robotic technology. However, larger-scale efforts are underway to make the multitask robot more sensitive to its environment, more capable to move and perform useful work, and more fully autonomous via the use of AI. In this paper, we review the terminology, the history, and the factors which are motivating the development of robotics and remove systems; discuss the applications related to the nuclear industry; and, finally, examine the state of the art of the technologies being applied to introduce more autonomous capabilities. Much of this latter work can be classified as within the artificial intelligence framework.

37817 (AD-A-204716/5/XAB) **Analysis of existing advanced data models and their applicability as a model for a multimedia data-base management system. Master's thesis.** Enbody, D.M. Naval Postgraduate School, Monterey, CA (USA). Dec 1988. 83p. Available from NTIS, PC A05/MF A01.

The constant and fast-paced changes that are taking place in computer technology have brought forth a vast array of new applications. It is now possible to store not only standard alpha-numerical data but also graphical, voice, and sound as well. This has opened up enormous possibilities for expanding the use of these data forms. This thesis is directed at exploring those possibilities and several current research projects that are attempting to model a multimedia data-base system. These models are explored in terms of both their strong and weak points. Two possible applications are then looked at in terms of how they could be modeled using each of these three methods.

37818 (INIS-SU–76, pp. 93-95) **Information retrieval system of nuclear fuel account for in-situ on-line control system of NPP with RBMK reactors.** Gorbunov, V.P.; Ivanenko, V.G. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1988. (In Russian). In *Physics and technology of atomic reactors. Scientific-technical collection.* Order Number DE89012164/JAW. Available from NTIS (US Sales Only), PC A06/MF A01; INIS.

Voprosy atomnoj nauki i tekhniki.; no. 1.

The structure of information retrieval system for account of nuclear dislocation and movement at NPP, designed for in-situ on-line control system of NPP with RBMK type reactor, is considered. 4 refs.; 2 figs.

37819 (K/DSRD–80) **Approaching distributed database applications using a programmable terminal emulator.** Clinard, J.A.; Robinson, J.J.; Phillips, J.T. Jr.; Johnson, G.L. Oak Ridge Gaseous Diffusion Plant, TN (USA). Jun 1989. 68p. Sponsored by Department of Defense. DOE Contract AC05-84OT21400. Order Number DE89014831/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

Two separate approaches were used to develop a prototype for entering data into a remote host computer in an automated manner. In the first approach, revisions were implemented in the IBM PC's terminal emulator VTEK 4.2. These revisions allowed pre-written script files to be processed to the host-based operating system and applications software as if the script file information had been entered on the keyboard. The script processing capability was implemented taking advantage of existing using-defined key capability and the DEC VT100 asynchronous terminal emulation of VTEK communications software. At present the script command and data files must be manually created at the PC using an editor or word processor. The script processing capability works with any host-based operating system or application software that interacts with a DEC VT100 terminal. An example is provided where VTEK script processing is used to automatically interact with a VAX-based Database Management System (DBMS), INGRES, appending PC-resident data records to an INGRES table, creating a default report, aborting to VMS, and disposing of the report ··· all without touching a key. An appendix is provided which discusses the second approach of developing a prototype VT100 emulator specifically designed for data entry to a remote host computer system. This software loads data automatically into a Vax Datatrieve database. It provides an alternative method of prototype development. The challenges for future development are identified and discussed. The use of the programmable terminal emulator for data control in the case of distributed database applications is also discussed. 7 refs.

37820 (ORNL/DSRD–15) **Corporate data base machines: Market analysis for the Joint Staff.** Johnson, M.L.; Phifer, M.S.; Bratten, W.A.; Emrich, M.L. Oak Ridge National Lab., TN (USA). Data Systems Research and Development Program. Jun 1989. 54p. Sponsored by Department of Defense. DOE Contract AC05-84OR21400. Order Number DE89014793/JAW. Available from NTIS, PC A04/MF A01 - OSTI; GPO Dep.

The Joint Chiefs of Staff initiated a consolidation and expansion of its corporate data base capabilities. This required enhancing and upgrading telecommunications. Network requirements included: migration to an industry standard; and specific software compatibility and application support. A market analysis was conducted to identify machines capable of supporting the new requirements. The results of the study are presented. 31 refs.

37821 (ORNL/FTR–3271) **[Discussions with International Energy Agency's Center for the Analysis and Dissemination of Demonstrated Energy Technologies concerned with database and analysis study series of reports, Sittard, Netherlands, May 22–26, 1989]: Foreign trip report.** Broders, M.A. Oak Ridge National Lab., TN (USA). 2 Jun 1989. 9p. Sponsored by DOE Conservation & Renewable Energy. DOE Contract AC05-84OR21400. Order Number DE89014750/JAW. Available from NTIS, PC A02/MF A01 - OSTI; GPO Dep.

The traveler, representing the United States CADDET National Team, participated in in-depth discussions with the IEA-CADDET concerned with the content, structure, and format of the CADDET database of demonstrated energy technologies and its associated database management system. These discussions resulted in plans being formulated for the further development and improvement of the CADDET database. Further discussions focused attention on the CADDET Analysis Study Series of reports. The first CADDET analysis study in this series, entitled "Small-Scale Cogeneration of Heat and Power," underwent a comprehensive review, and plans were made for its network upgrade prior to final publication.

37822 (SAND–88-3439) **Management Information Database System.** Leishman, N.L. Sandia National Labs., Albuquerque, NM (USA). May 1989. 37p. Sponsored by DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE89014595/JAW. Available from NTIS, PC A03/MF A01 - OSTI; GPO Dep.

This is a description of a computerized database tool for use by operational management. The Management Information Database System was created to more efficiently maintain the information needed by managers for time and material cost accounting and resource scheduling. Reports produced reflect the current status of assignments and balances of F-orders. 6 figs.

37823 (SSC/ISD–8805) **Proceedings from the fifth information systems technology conference.** Supply and Services Canada, Fredericton, NB (Canada). Information Systems Div. 1988. 106p. (CONF-8805304–: 5. information systems technology conference, Fredericton, Canada, 18-19 May 1988;MICROLOG–88-05840). Available from New Brunswick Legislative Library, Government Documents Section, 766 King Street, Fredericton, NB, Canada E3B 5H1; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

Current trends and applications of information systems technology were presented at a conference in New Brunswick. Papers were presented on communications networks, information processing systems, optical disc systems and applications, an integrated radio communication system, an automated purchasing system, and the role of computers in assisting workplace synergy. A separate abstract has been prepared for one paper from this conference.

37824 (SSC/ISD–8805, pp. 32) **Information processing at N.B. Power.** Reid, D. (N.B. Power, NB, Canada). Supply and Services Canada, Fredericton, NB (Canada). Information Systems Div. 1988. (CONF-8805304–: 5. information systems technology conference, Fredericton, Canada, 18-19 May 1988;MICROLOG–88-05840). In *Proceedings from the fifth information systems technology conference.* Available from New Brunswick Legislative Library, Government Documents Section, 766 King Street, Fredericton, NB, Canada E3B 5H1; $N/C; MF CANMET/TID, Energy, Mines and Resources Canada, 555 Booth St., Ottawa, Ont., Canada K1A 0G1; $10 CAN.

The use of information processing to meet the needs of an electric utility in New Brunswick is described. At the utility, an information systems division has been organized to provide computing capacity and operating support for its various operating divisions. This paper concentrates on the operations of the Distribution Operating Division, which is responsible for electrical service to customers. This division has facilities for identifying and tracking the restoration of electrical service to customers, locating customers

and equipment, servicing customer information requests, work planning and scheduling, engineering analysis, and support for administration and professional staff in common office activities. A number of end user interfaces have been designed to meet specific user requirements, and these interfaces can be changed as necessary without any changes to the communications network.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in *DOE Energy Data Base: Corporate Author Entries* (DOE/TIC-4585). Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, also abbreviated; and (3) the language of the document if non-English (R;US;In French). Author affiliations are not listed in this index.

Effluent and environmental monitoring report for calendar year 1988, 14:37204 (R;US)

Bielefeld Univ. (Germany, F.R.). Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS)
Klein's paradox and the relativistic point interaction, 14:37710 (R;DE)

Black and Veatch/Motor Columbus, Associates, Kansas City, MO (USA)
Hydropower plant modernization guide: Volume 3, Automation: Final report, 14:35875 (R;US)

Bochum Univ. (Germany, F.R.). Sonderforschungsbereich 237 - Unordnung und Grosse Fluktuationen
Klein's paradox and the relativistic point interaction, 14:37710 (R;DE)

Bonn Univ. (Germany, F.R.). Physikalisches Inst.
On the construction of certain instanton bundles over flat tori, 14:37546 (R;DE)

Boston Univ., MA (USA)
Global density specification in the lower thermosphere. Final report, 15 June 1985-17 June 1988, 14:37448 (R;US)
Ionization equilibrium in dense plasmas, 14:37748 (D;US)

Boston Univ., MA (USA). Dept. of Chemistry
Study of intermediates from transition metal excited-state electron-transfer reactions: Progress report, August 1, 1986–December 31, 1988, 14:36741 (R;US)

BOT Engineering Ltd., Campbellville, ON (Canada)
Fresh fuel verification feasibility study, 14:36989 (R;CA)

Brandeis Univ., Waltham, MA (USA). Dept. of Physics
Research in elementary particle physics: Technical progress report, June 1, 1988–May 31, 1989, 14:37494 (R;US)

British Columbia Hydro and Power Authority, Surrey, BC (Canada)
Water treeing as a function of moisture present in XLPE cable insulation, 14:35968 (R;CA)

British Columbia Hydro, Vancouver, BC (Canada)
Village energy retrofit of electric domestic water heating in a B.C. Hydro diesel generating area, 14:36371 (R;CA)

British Columbia Hydro, Vancouver, BC (Canada). Residential and Commercial Energy Management
Residential domestic water heating advisory computer program. Vol. 2, computer user's guide. Vol. 3, programmer's guide, 14:36372 (R;CA)
Residential domestic water heating advisory computer program. Vol. 1, technical report, 14:36373 (R;CA)

British Inst. for Ornithology, Tring (UK)
Wader migration and distribution in South West estuaries. V. 2. Appendices, 14:35944 (R;GB)
Wader migration and distribution in South West estuaries (in relation to the Severn Barrage). V. 1, 14:35948 (R;GB)

Brookhaven National Lab., Upton, NY (USA)
A study of the use of crosslinked high-density polyethylene for low-level radioactive waste containers, 14:35794 (R;US)
Beam position monitor analysis, 14:37068 (R;US)
BNL workshop on rare K decays and CP violation, August 25-27, 1988, 14:37497 (R;US)
Characterization of painted surfaces in the United States from the perspective of potential damage from acidic deposition, 14:37163 (R;US)
Cognition and order in Langmuir-Blodgett films of a 3-hexadecyl pyrrole and ferrocene-derivatized pyrrole mixed monolayer system, 14:36659 (R;US)
Data base on dose reduction research projects for nuclear power plants: Volume 3, 14:36160 (R;US)
Development of alternate visual examination requirements for dynamic restraints (snubbers), 14:36129 (R;US)
Occupational dose reduction at nuclear power plants: Annotated bibliography of selected readings in radiation protection and ALARA: Volume 4, 14:36159 (R;US)
Recommendations for resolution of public comments on USI [Unresolved Safety Issues] A-40, "Seismic Design Criteria", 14:36165 (R;US)
Small propulsion reactor design based on particle bed reactor concept, 14:36128 (R;US)
Superexchange coupling mechanisms for electron transfer processes, 14:36735 (R;US)
Survey of results from Brookhaven Experiment 802 at the AGS, 14:37596 (R;US)
Synchrotron light source data book, 14:37030 (R;US)
Synchrotron x-ray fluorescence analyses of stratospheric cosmic dust: New results for chondritic and nickel-depleted particles, 14:37425 (R;US)

Brown and Caldwell, Pleasant Hill, CA (USA)
Trace metal removal by iron coprecipitation: Field evaluation: Final report, 14:35960 (R;US)

Brown Univ., Providence, RI (USA)
Data acquisition at D0, 14:37105 (R;US)
Elastic scattering of muon-neutrinos and muon-anti-neutrinos by electrons, 14:37499 (R;US)
Neural networks for event filtering at D∅, 14:37106 (R;US)
Neural networks, D0, and the SSC, 14:37104 (R;US)
Offline computing farms, 14:37028 (R;US)
Progress report for a research program in computational physics, 14:37492 (R;US)

Brown Univ., Providence, RI (USA). Dept. of Physics
A microprocessor farm architecture for high speed data acquisition and analysis, 14:37103 (R;US)
An Outstanding Junior Investigator Award in experimental high energy physics: Progress report, January 1, 1989 to December 31, 1989, 14:37102 (R;US)
Progress report for a research program in theoretical high energy physics, 14:37493 (R;US)
Progress report of a research program in experimental high energy physics: Task B: Progress report, January 1–December 31, 1989, 14:37501 (R;US)
Progress report of a research program in experimental high energy physics, January 1, 1989–December 31, 1989, 14:37500 (R;US)

Bundesgesundheitsamt, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene
Biological indicators for giving proof of exposure to ionizing radiation - lectin coupling to human blood cells possibly a 'biological dosemeter'?, 14:37376 (R;DE;In German)

Bundesministerium des Innern, Bonn (Germany, F.R.)
Structural-engineering studies on the use of filter dusts from waste-incinerator flue gas cleaning as an aggregate bitumen in road construction, 14:36420 (R;DE;In German)

Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.)
Improvement of work safety and strain reduction when equipping thin faces through the development and testing of a turning and swinging installation for shield support units. Final report, 14:35596 (R;DE;In German)
Leaching of vitrified high-level-active-waste in a near reality simulated repository system. Final report, 14:35789 (R;DE;In German)
Microbiological investigations on nitrification in waste water treatment plants with fixed sludge beds. Pt. 2. Pilot scale test. Final report, 14:35903 (R;DE;In German)
Process and system for combustion, especially of slow-reacting coal dust, 14:35589 (R;DE;In German)
Waste heat recovery from a sulfuric acid plant, 14:36414 (R;DE;In German)

Bureau of Mines, Pittsburgh, PA (USA). Pittsburgh Research Center
Hazards of explosives dusts, 14:37150 (R;US)

Bureau of Mines, Washington, DC (USA)
Potential supply of minerals from the White Mountains National Recreation Area and Part of the North Steese National Conservation Area Alaska. Appendix A- potential mineral supply analysis methodology, 14:36237 (R;US)

C

Caen Univ., 14 (France)
Heavy ions reactions below 100 MeV per nucleon: two contributions to the study of subthreshold pion production, 14:37601 (R;FR;In French)

Calgary Univ., AB (Canada). Faculty of Continuing Education
Challenges and innovations 1989. 6th Annual heavy oil and oil sands technical symposium, 14:35691 (R;CA)

California Dept. of Health Services, Berkeley, CA (USA). Air and Industrial Hygiene Lab.
Southern California Air Quality Study: fall study. Final report, 14:37188 (R;US)

California Inst. of Tech., Pasadena, CA (USA)
Research in nuclear physics at low and intermediate energies, neutrinos and x rays: Final report, May 1980–August 1987, 14:37563 (R;US)
Study of weak solar magnetic fields. Final report, 1 December 1987-30 November 1988, 14:37424 (R;US)

California Univ., Berkeley, CA (USA). Coll. of Engineering
Surface properties of coal and their role in coal beneficiation: Technical progress report, March 15, 1989–June 14, 1989, 14:35557 (R;US)

California Univ., Berkeley, CA (USA). Dept. of Physics
Medium energy meson physics: [Progress report, 1981–1983], 14:37564 (R;US)
Medium energy meson physics: Progress report, January 1, 1986 through December 31, 1986, 14:37565 (R;US)
Medium energy meson research, 14:37506 (R;US)
[Medium energy meson research]: [Progress report], 14:37570 (R;US)

California Univ., Davis, CA (USA). Dept. of Civil Engineering
Centrifuge tests on simulation of the "cookie cutter" mechanism of chimney collapse into underground openings: Final report, 14:37159 (R;US)

California Univ., Los Angeles, CA (USA). Dept. of Chemical Engineering
Continuous thermodynamics and group contribution methods for coal liquids: Final report, October 1, 1986–October 1, 1989, 14:35558 (R;US)

California Univ., Los Angeles, CA (USA). Inst. for Plasma and Fusion Research
Role of alpha particle damping in fast wave current drive and heating, 14:37744 (R;US)

California Univ., Riverside, CA (USA). Dept. of Chemistry
Spectroscopic study of coal structure and reactivity: Quarterly report, January 1, 1989 to March 31, 1989, 14:35552 (R;US)

Cambridge Univ. (UK). Dept. of Engineering
Drum centrifuge modelling of long-term pollutant migration through a soil layer, 14:37222 (R;GB)

Canada Cement Lafarge Ltd., Woodstock, ON (Canada)
Development of air-entrained, high-strength concrete. Normal weight concrete, 14:36660 (R;CA)
Development of air-entrained, high-strength concrete. Lightweight concrete, 14:36661 (R;CA)

Canada Centre for Mineral and Energy Technology, Ottawa, ON (Canada)
"Slip effects" in concentrated emulsions, 14:37132 (R;CA)
A preliminary pH analysis of coal slurries from the Sydney Coalfield, N.S., 14:35570 (R;CA)
Bibliography of CANMET publications on coprocessing, 14:35533 (R;CA)
Canadian coal preparation process-control research and development directions, 14:35516 (R;CA)
CANMET Catalogue of publications, 1984/1985, 14:36240 (R;CA;In English and French)
CANMET review 1986-1987, 14:36239 (R;CA;In English and French)
Coal dustiness: characterization and control, 14:35549 (R;CA)
Corrosion inhibition in sour media, 14:36469 (R;CA)
Data compilation report: strata deformation monitoring, No. 3 TBM tunnel, Donkin-Morien mine, N.S., 14:35567 (R;CA)
Energy conservation in the industrial minerals sector. Comminution - Phase 3. Activity 4: monitoring and control of a dry grinding circuit using a particle size analyzer and programmable controllers, 14:36411 (R;CA)
Final report on the comparative combustion properties of raw and washed Prince Mine coal, 14:35588 (R;CA)
Fly ash/cement packing for Lingan Mine: final appraisal and trial proposal, 14:35561 (R;CA)
Measurements of solids concentrations in coal slurries using microwaves, 14:35550 (R;CA)
Methane desorption in coal handling, 14:35548 (R;CA)
Proposal for the development of a computerized guidance system for the Easi-Miner continuous mining machine, 14:35571 (R;CA)
Statistical analysis of collected times between failure and times to repair of Easi-Miner at Obed Mine, 14:35569 (R;CA)
Survey of microprocessor based performance monitoring devices in Canadian surface coal and oil sands mines in 1987, 14:35572 (R;CA)
Technical note on the construction of stoppings or dams in the Sydney coalfield, 14:35574 (R;CA)
The application of rock bolt design methods to a proposed 7 West crosscut, Prince Mine, Sydney Coalfield, N.S., 14:35568 (R;CA)
The selection, development and testing of an integrated truck/shovel management system, 14:35573 (R;CA)
Tube wastage in FBC boilers at Summerside - causes and resolution, 14:37022 (R;CA)
Tube wastage in FBC boilers at Summerside - causes and resolution, 14:35587 (R;CA)

Canadian Forestry Service, Edmonton, AB (Canada). Northern Forest Research Centre
Proceedings of the workshop on aspen pulp, paper and chemicals, 14:35900 (R;CA)

Canadian Fusion Fuels Technology Project, Toronto, ON (Canada)
Canadian contributions to the safety and environmental aspects of fusion, 14:37757 (R;CA)
Conditioning and handling of tritiated wastes at Canadian nuclear power facilities, 14:35770 (R;CA)
Field studies of HT oxidation and dispersion in the environment. I. The 1986 August experiment at Chalk River, 14:37225 (R;CA)
Neutronics analysis for aqueous self-cooled fusion reactor blankets, 14:37756 (R;CA)
Review of synergisms in materials erosion due to multispecies impact, 14:37755 (R;CA)

Canadian Heavy Oil Association (Canada)
Heavy oil. Markets in the 90's. How do they look?, 14:35647 (R;CA)
Optimizing heavy oil production through innovative techniques. Proceedings [of the] fourth quarterly meeting of the Canadian Heavy Oil Association, 14:35618 (R;CA)

Thermal well completions seminar, 14:35722 (R;CA)

Carmel Hospital, Haifa (Israel). Inst. of Endocrinology
Israel EQAS for thyroid related hormones. Final report for the period June 1984 - February 1988, 14:37316 (R;XA)

Carnegie-Mellon Univ., Pittsburgh, PA (USA)
Hyperon production with antiprotons, 14:37503 (R;US)
Lambda-antilambda decay asymmetries and CP violation, 14:37504 (R;US)
Strangeness production with antiprotons at LEAR, 14:37505 (R;US)

Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Physics
Report of the kaon subcommittee of nuclear science advisory committee: Final report, 14:37496 (R;US)
Technical advisory panel for the large acceptance spectrometer: Final report, 14:37108 (R;US)

Cascadia Research Collective, Olympia, WA (USA)
Distribution, abundance and age segregation of bowhead whales in the southeast Beaufort Sea, August-September 1986, 14:35661 (R;CA)

Catholic Univ. of America, Washington, DC (USA)
Advanced instrumentation for local measurement of gas-solid suspension flows: Quarterly technical progress report No. 9/10, November 1, 1988–April 30, 1989, 14:35577 (R;US)

International Atomic Energy Agency, Vienna (Austria)
$^{230}Th/^{234}U$ dating of the quaternary spring travertines in the Arava Rift Valley of Israel and paleoclimatic implications. Final report for the period 15 December 1986 - 15 December 1987, 14:37405 (R;XA)
Agreement of 27 September 1988 between the International Atomic Energy Agency and the Government of India for the application of safeguards in connection with the supply of a nuclear power station from the Union of Soviet Socialist Republics, 14:35837 (R;XA)
Calculation analysis of TRIGA MARK II reactor core composed of two types of fuel elements. Final report for the period 1 August 1984 - 31 July 1986, 14:36115 (R;XA)
Implementation of computer programmes for fitting of positron annihilation spectra on "personal computers". Final report for the period 1 May 1986 - 14 June 1988, 14:37468 (R;XA)
Israel EQAS for thyroid related hormones. Final report for the period June 1984 - February 1988, 14:37316 (R;XA)
Reviewing surveillance activities in nuclear power plants. Supplementary guidance and reference material for IAEA Operational Safety Review Teams (OSARTs), 14:36147 (R;XA)
Statement of the Islamic Republic of Iran, 14:36453 (R;XA)
Statement of the official spokesman of the Iraqi Ministry of Foreign Affairs, 14:36452 (R;XA)
Tenth working group meeting of representatives of RCA Member States. Report, 14:37788 (R;XA)
International Centre for Theoretical Physics, Trieste (Italy)
Compactifications of the eleven-dimensional supermembrane, 14:37700 (R;XA)
Enlarged superfluid model of atomic nucleus, 14:37609 (R;XA)
Local structure of a 2-codimensional conformally flat submanifold in an Euclidean space R^{n+2}, 14:37699 (R;XA)
Paleomagnetic study of Shanwang formation, Shandong Province, China, 14:37409 (R;XA)
Seismic zoning in India, 14:37408 (R;XA)
Iowa State Univ. of Science and Technology, Ames, IA (USA)
Optical properties of metals and alloys: Au, Ag, FeRh, $AuAl_2$, and $PtAl_2$, 14:36604 (D;US)
Theoretical investigations of phonon anomalies in fcc La and W(001), 14:36603 (D;US)
Istituto Nazionale di Fisica Nucleare, Milan (Italy)
Generalised exciton model theories for the description of pre-equilibrium angular distributions, 14:37620 (R;IT)
Itasca Consulting Group, Inc., Minneapolis, MN (USA)
Analysis of alternative waste isolation concepts, 14:35795 (R;US)

J

Japan Atomic Energy Research Inst., Tokyo (Japan)
Analysis of the CSNI/GREST core concrete interaction chemical thermodynamic benchmark exercise using the MPEC2 computer code, 14:35993 (R;JP)
Annual report of the Osaka Laboratory for Radiation Chemistry, Japan Atomic Energy Research Institute, (no. 20). April 1, 1986 - March 31, 1987, 14:36855 (R;JP)
Break location effects on PWR small break LOCA phenomena. Inadequate core cooling in lower plenum break test at LSTF, 14:36156 (R;JP)
Critical heat flux (CHF) characteristics of high conversion pressurized water reactor with double flat core, 14:36010 (R;JP;In Japanese)

Fission products plate-out analysis code in the HTGR: PLAIN, 14:36021 (R;JP;In Japanese)
Graphite structural design code for the High Temperature Engineering Test Reactor, 14:36023 (R;JP;In Japanese)
Measurement of the current distribution in JT-60 plasma by He beam, 14:37733 (R;JP;In Japanese)
Study on the optimization with shielding design of marine reactor, 14:36038 (R;JP;In Japanese)
Study on the reaction between SiC and Pd, (2), 14:36022 (R;JP;In Japanese)

Jednota Ceskoslovenskych Matematiku a Fyziku, Prague (Czechoslovakia)
Ninth conference of Czechoslovak physicists. Part 1, 2, 14:37678 (R;CS;In Czech, Slovak)

Jersey Central Power and Light Co., Morristown, NJ (USA)
A comparison of steam-injected gas turbine and combined-cycle power plants: Technology assessment: Final report, 14:35955 (R;US)

Joint Inst. for Nuclear Research, Dubna (USSR)
4. International symposium on selected topics in statistical mechanics, 14:37702 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation
Classification of integrable two-dimensional models of relativistic field theory by means of computer, 14:37552 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy
Automodel properties of baryon clusters in interactions of p-, d-, He-, C- and π^--particles with carbon nuclei within 4-40 GeV/c per nucleon momentum interval, 14:37632 (R;SU;In Russian)
Program for calculating parameters of atomic beam of polarized particle source and jet polarized targets on 'Pravets-16', 14:37086 (R;SU;In Russian)
Study on total disintegration of lead nuclei with magnesium-24 nuclei at 4.5 A GeV/c, 14:37598 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics
Analysis of dynamic characteristics of ^{235}U fission with resonance neutrons on the basis of data on fission fragment charge and mass fragmentation, 14:37634 (R;SU;In Russian)
Intensive two-quantum cascades and fragmentation of quasiparticle states in some deformed nuclei, 14:37633 (R;SU;In Russian)
Results of experimental investigation of injector part of the LIU-30 accelerator, 14:37087 (R;SU;In Russian)
Study on fragment charge and mass fragmentation in ^{235}U fission with resonance neutrons, 14:37604 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems
Hardware and software complex for cyclotron beam dynamics simulation, 14:37062 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions
Ionization chamber-detecting setup of Vasilisa installation for the study of characteristics of total fusion reaction product decay, 14:37115 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics
Adiabatic representation of scattering problem in three-body quantum system, 14:37705 (R;SU;In Russian)
Dipole octupole correlations in a boson model and evidence for their existence in nuclei, 14:37631 (R;SU)
Klein's paradox and the relativistic point interaction, 14:37710 (R;DE)

Jones (J.A.) Applied Research Co., Charlotte, NC (USA)

Discovery and confirmation of fission, 14:37602 (R;DE)

Management and Technical Consultants, Inc., Columbia, MD (USA)
Development of a pulsed coal combustor fired with CWM [coal-water mixture]: Phase 3, Final report, 14:35582 (R;US)

Manitoba Dept. of Environment and Workplace Safety and Health, Winnipeg, MB (Canada). Water Standards and Studies Section
Canada-Manitoba agreement on the study and monitoring of mercury pollution in the diversion system of the Churchill River. Summary report, 14:35896 (R;CA;In French)
Water chemistry/water discharge relationships within the Churchill River diversion and Lake Winnipeg regulation region, Manitoba, Canada, 14:35895 (R;CA)

Manitoba Dept. of Natural Resources, Winnipeg, MB (Canada). Fisheries Branch
Summary of phytoplankton data for the Nelson River and Rat-Burntwood lakes, 1987, 14:37235 (R;CA)

Manitoba Public Utilities Board, Winnipeg, MB (Canada)
Application by Greater Winnipeg Gas Company and ICG Utilities (Manitoba) Ltd. for an order or orders approving rates for the sale of natural gas from November 1, 1988 to October 31, 1990, flowing from new gas supply contracts, 14:35677 (R;CA)
Manitoba Hydro application for an order requesting a general rate review and approval of certain rate adjustments effective April 1, 1989, 14:36339 (R;CA)

Manitoba Univ., Winnipeg, MB (Canada)
Final report of the Commission of Inquiry into Gasoline Pricing in the province of Manitoba, 1987, 14:35655 (R;CA)

Marine Mammal Commission, Washington, DC (USA)
Preliminary assessment of habitat protection needs for West Indian manatees on the east coast of Florida and Georgia. Final report, 14:37284 (R;US)

Martin Marietta Energy Systems, Inc., Oak Ridge, TN (USA)
1988 DOE model conference proceedings: Volume 2, 14:35772 (R;US)
1988 DOE model conference proceedings: Volume 3, 14:35773 (R;US)
1988 DOE model conference proceedings: Volume 5, 14:35775 (R;US)

Martin Marietta Energy Systems, Inc., Piketon, OH (USA)
Long-range health and safety management plan, fiscal years 1989–1995, 14:35842 (R;US)

Martin Marietta Energy Systems, Inc., Portsmouth, OH (USA). Quality and Technical Services Div.
A review of the Model 5A uranium hexafluoride cylinder, 14:35769 (R;US)

Martin Marietta Labs., Baltimore, MD (USA)
Evolution of the chemistry of passive films of sputter-deposited, supersaturated Al alloys. Annual report, 1 July 1987-30 November 1988, 14:36461 (R;US)

Maryland Univ., College Park, MD (USA). Dept. of Computer Science
Parallel problem-solving system, PRISM (Parallel Inference System). Final report, November 1986-February 1988, 14:37796 (R;US)

Maryland Univ., College Park, MD (USA). Lab. for Plasma Research
Free electron laser with small period wiggler and sheet electron beam: A study of the feasibility of operation at 300 GHz with 1 MW CW output power, 14:36961 (R;US)

Massachusetts Inst. of Tech., Cambridge, MA (USA)
Secondary atomization of coal-water fuels for gas turbine applications: Final report, 14:35581 (R;US)

Massachusetts Inst. of Tech., Cambridge, MA (USA). Center for Space Research
Path-integral formulation of ion heating, 14:37450 (R;US)

Massachusetts Inst. of Tech., Cambridge, MA (USA). Dept. of Chemistry
Chemistry of bimetallic linked cyclopentadienyl complexes: Progress report, 1 December 1986–30 November 1989, 14:36738 (R;US)

Massachusetts Inst. of Tech., Cambridge, MA (USA). Dept. of Electrical Engineering and Computer Science
Thin-film optics for signal-processing applications. Final report, 1 September 1986-31 May 1988, 14:36999 (R;US)

Massachusetts Inst. of Tech., Cambridge, MA (USA). Dept. of Nuclear Engineering
Magnetohydrodynamic clump instability, 14:37713 (R;US)

Massachusetts Inst. of Tech., Lexington, MA (USA). Lincoln Lab.
Effect of noble gases on the properties of ion-beam-sputtered niobium films, 14:36465 (R;US)
Single-frequency microchip Nd lasers, 14:36960 (R;US)

Massachusetts Univ., Amherst, MA (USA). Water Resources Research Center
Fiscal year 1987 program report (Massachusetts Water Resources Research Center). Annual report, 14:37280 (R;US)

Materials Engineering Associates, Inc., Lanham, MD (USA)
Post-irradiation fracture toughness characterization of four lab-melt plates: Revision 1, 14:36578 (R;US)

Materials Research Labs., Ascot Vale (Australia)
Corrosion of high-density sintered tungsten alloys. Part 1. Immersion testing, 14:36463 (R;AU)
Corrosion of high-density sintered tungsten alloys. Part 2. Accelerated corrosion testing, 14:36464 (R;AU)
Introduction to lithium batteries. General document, 14:36220 (R;AU)

Environmental Regulatory Update Table, May 1989, 14:37220 (R;US)
Estimates of CO_2 emissions from fossil fuel burning and cement manufacturing, based on the United Nations energy statistics

and the US Bureau of Mines cement manufacturing data, 14:37173 (R;US)
Estimating departure times from traffic counts using dynamic assignment, 14:36402 (R;US)
Estimating fracture toughness using tension or ball indentation tests and a modified critical strain model, 14:36475 (R;US)
Evaluation of weldment creep and fatigue strength-reduction factors for elevated-temperature design, 14:36083 (R;US)
Explosives detection with an ion trap mass spectrometer, 14:37148 (R;US)
Full-pattern refinement of crystalline polymer fibers based on diffractometer measurements, 14:36664 (R;US)
Fusion reactor materials semiannual progress report for the period ending September 30, 1988, 14:37759 (R;US)
Genetics of early embryo survival, 14:37314 (R;US)
Impact of an apparent radiation embrittlement rate on the life expectancy of PWR [pressurized-water-reactor] vessel supports, 14:36006 (R;US)
Impacts of DOE Order 5820.2A on Oak Ridge National Laboratory, 14:37227 (R;US)
Insurance and bonding, 14:37401 (R;US)
International conference on analytical chemistry in nuclear technology, June 5–8, 1989, Karlsruhe, France: Foreign trip report, 14:36729 (R;US)
Laboratory testing of a fluidized-bed dry-scrubbing process for the removal of acidic gases from a simulated incinerator flue gas: Final report, 14:36416 (R;US)
Least-cost planning in the utility sector: Progress and challenges, 14:36338 (R;US)
Marketing for Oak Ridge technology transfer, 14:36242 (R;US)
Microbial coal liquefaction, 14:36520 (R;US)
Mission survey for the Pressure Vessel Research User's Facility (PVRUF), 14:36011 (R;US)
Monitoring of corrosion in ORGDP cylinder yards, 14:35777 (R;US)
Multi-energy neutron detector for counting thermal neutrons, high-energy neutrons, and gamma photons separately, 14:37133 (R;US)
Multiphoton ionization of $(Xe)_n$ and $(NO)_n$ clusters using a picosecond laser, 14:37464 (R;US)
Negotiating a license to government technology, 14:36241 (R;US)
Noncontacting laser diffraction strain extensometer for material properties characterization at high temperatures, 14:36617 (R;US)
Nonfilm radiography at the Oak Ridge Y-12 Plant, 14:37121 (R;US)
Nuclear Medicine Program progress report for quarter ending December 31, 1988, 14:37320 (R;US)
Numerical modeling and tracer study of groundwater—Yenliao Nuclear Power Plant site, Taipei, Taiwan, June 5–12, 1988: Foreign trip report, 14:35796 (R;US)
Oak Ridge National Laboratory Health and Safety Long-Range Plan: Fiscal years 1989–1995, 14:36880 (R;US)
ORMONTE: An uncertainty analysis code for use with user-developed systems models on mainframe or personal computers: A user's guide, 14:37808 (R;US)
Overview of the US program of controls for advanced reactors, 14:36027 (R;US)
Panel discussion: Progress and plans for magnetic fusion: Summary of comments on recent progress in fusion research at the Oak Ridge National Laboratory, 14:37716 (R;US)
Pasture grass interception and retention of ^{131}I, ^{7}Be, and insoluble microspheres deposited in rain, 14:37203 (R;US)
Probing nuclear currents with dilepton production in ultrarelativistic heavy-ion collisions, 14:37498 (R;US)
Proceedings of the 20th DOE/NRC nuclear air cleaning conference: An index to the 1st–20th AEC/ERDA/DOE and DOE/NRC nuclear air cleaning conferences, 14:37202 (R;US)
Process and preparation facility for uranium tetrafluoride, 14:35760 (TG;US)
Process and preparation facility for double uranium fluoride, 14:35761 (TG;US)
Radiation exposure inside reinforced concrete buildings at Nagasaki, 14:37381 (R;US)
Radioactive materials packaging standards and regulations: Making sense of it all, 14:35778 (R;US)
Recent results on cleaning and conditioning the ATF vacuum system, 14:37758 (R;US)
Reinforced confinement in a nuclear reactor, 14:36012 (TG;US)
Relaxation response of A533B steel from 25 to 600°C, 14:36474 (R;US)
Risk assessment and late effects of radiation in low-earth orbits, 14:37343 (R;US)
Saturation behavior of parametric four-wave mixing due to two-photon interference effect, 14:37465 (R;US)
Simulation of a continuous rotary dissolver, 14:35763 (R;US)
Structural ceramics in the advanced materials world, 14:36473 (R;US)
Structural integrity evaluation based on an innovative field indentation microprobe, 14:36984 (R;US)
Sulfidation/oxidation properties of iron-based alloys containing niobium and aluminum, 14:35539 (R;US)
Supervisory control in a distributed, hierarchical architecture for a multimodular LMR, 14:36094 (R;US)
Techniques for producing monodispersed biocatalyst beads for use in columnar bioreactors, 14:36665 (R;US)
The amorphous to gamma transformation in ion implanted Al_2O_3, 14:36618 (R;US)
The Sigmajig: An improved hot-cracking test, 14:36479 (R;US)
The texture variation in extruded graphite, 14:36663 (R;US)
The value of marginal analysis in electric power system operations, 14:36274 (R;US)
Thirteenth radioactive conference, radiocarbon measurements and applications, Dubrovnik, Yugoslavia, June 20–25, 1988: Foreign trip report, 14:37406 (R;US)
Tool integration and enhancement for standard cell designs, 14:37000 (R;US)
Transport survey calculations using the spectral collocation method, 14:37714 (R;US)
Transverse energy scaling and energy density estimates from ^{16}O- and ^{32}S-induced reactions, 14:37562 (R;US)
[2nd international symposium on high-temperature corrosion of advanced materials and coatings, Les Embiez, France, and visit to Manchester, England, May 19–27, 1989]: Foreign trip report, 14:35536 (R;US)
[2nd international symposium on high-temperature corrosion of advanced materials and coatings, Les Embiez, France, May 22–26, 1989]: Foreign trip report, 14:35537 (R;US)
[Analytical chemistry in nuclear technology, Karlsruhe, Germany and visit to Seibersdorf, Austria, June 3–22, 1989]: Foreign trip report, 14:35766 (R;US)
[Biospheric model validation in urban, terrestrial, and aquatic environments, Budapest, Hungary, Vienna, Austria, Neuherberg, and Schmallenberg, W. Germany, April 25–May 12, 1988]: Foreign trip report, 14:37661 (R;US)
[Discussion of domestic refrigerator/freezer (R/F) design for non-azeotropic refrigerant mixtures (NARMs), Hannover, W. Germany, and visit to Kassel, W. Germany, May 2–5, 1989]: Foreign trip report, 14:36387 (R;US)
[Discussions with International Energy Agency's Center for the Analysis and Dissemination of Demonstrated Energy Technologies concerned with database and analysis study series of reports, Sittard, Netherlands, May 22–26, 1989]: Foreign trip report, 14:37821 (R;US)
[Electron-ion cross beam experiments and ion-atom collisions, Louvain-la-Neuve, Belgium, Paris, France, Utrecht, the Netherlands, and Groeningen, the Netherlands, April 30–May 28, 1989]: Foreign trip report, 14:37474 (R;US)
[Environmental assessment for radioactive waste disposal, Daeduk, South Korea, May 12–June 14, 1989]: Foreign trip report, 14:35797 (R;US)
[European aerosol conference and workshop on aerosol deposition to natural surfaces, Lund, Goteborg, and Stockholm, Sweden, and Oslo, Norway, August 29–September 17, 1988]: Foreign trip report, 14:37176 (R;US)
[Fifth international congress of plant pathology, Kyoto, Japan, August 23–27, 1988]: Foreign trip report, 14:37175 (R;US)
[International conference on electrostatic accelerators (ICEA), Strasbourg, France and Heidelberg, Germany, and discussion

of electron cyclotron resonance ion sources, Grenoble, France, May 23–29, 1989]: Foreign trip report, 14:37091 (R;US)
[International conference on Thermal reactor safety, October 2-7, 1988, Avignon, France]: Foreign trip report, 14:36167 (R;US)
[International Energy Agency third experts meeting of Annex 20 on Airflow patterns within buildings, May 30–June 2, 1989, Aalborg, Denmark; June 1, Aalborg University, Denmark; June 5-6, Taastrup, Denmark]: Foreign trip report, 14:36388 (R;US)
[International workshop on terrestrial field testing of pesticide, Cambridge, United Kingdom, September 11–16, 1988]: Foreign trip report, 14:37335 (R;US)
[Radiological incidents, Tours, France, June 18–June 24, 1988]: Foreign trip report, 14:37334 (R;US)
[Twelfth international conference on cyclotrons and their applications, Berlin, W. Germany, and visit to Hahn-Meitner-Institute, May 8–12, 1989]: Foreign trip report, 14:37044 (R;US)
[Working meeting of the International Energy Agency Annex 14 on Working fluids and transport phenomena in advanced absorption heat pumps, May 28-30, 1989, Stockholm, Sweden; May 31, 1989, Nykoping, Sweden; June 5, 1989, Stuttgart, West Germany; June 6, 1989, Essen, West Germany; June 7, 1989, Munich, West Germany]: Foreign trip report, 14:36389 (R;US)
[Workshop on global vegetation models, Laxenburg, Austria, 3 June–9 August 1988]: Foreign trip report, 14:37174 (R;US)

Oak Ridge National Lab., TN (USA). Data Systems Research and Development Program
Corporate data base machines: Market analysis for the Joint Staff, 14:37820 (R;US)

Oak Ridge Technical Enterprises, TN (USA)
Plasma current startup by lower hybrid waves in the JIPP T-IIU tokamak, 14:37730 (R;JP)

Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H. (Austria)
Automatic programmable air sampling stations. Instruction manual, 14:37118 (R;AT;In German)
HTR research and development in Austria. 1987/1988 progress report, 14:36025 (R;AT)

Oklahoma State Univ., Stillwater, OK (USA). School of Chemical Engineering
Phase equilibrium data for development of correlations for coal fluids: Report for the period April 15, 1989–June 15, 1989, 14:35530 (R;US)

Ontario Energy Board, Toronto, ON (Canada)
Gas supply. Reference from the Lieutenant Governor in Council, 14:35678 (R;CA)

A solid state video recorder as a direct replacement of a mechanically driven disc recording device in a security system, 14:37812 (R;US)
A summary of hydrogen-air detonation experiments, 14:36161 (R;US)
A synopsis of analyses (1981–87) performed to assess the stability of underground excavations at Yucca Mountain: Yucca Mountain Project, 14:35808 (R;US)
A technique for efficiently cleaning and conditioning low- and medium-energy accelerators, 14:37045 (R;US)
A test system for thermomechanical fatigue of solder joints, 14:36585 (R;US)
A wind shielded fire test facility, 14:36887 (R;US)
Advanced Small Site Program, 14:37789 (R;US)
Aerosol sampling and Transport Efficiency Calculation (ASTEC) and application to surtsey/DCH aerosol sampling system: Code version 1.0: Code description and user's manual, 14:36163 (R;US)
An evaluation of the polyester/polyethylene badge packet as an identification card, 14:37792 (R;US)
An improved design for stretched-membrane heliostats, 14:35926 (R;US)
Annealing and strain effects on Tl-Ba-Ca-Cu-O crystals and ceramics, 14:36647 (R;US)
Argonne Unified Safeguard: An integrated materials monitoring/tracking and accounting system, 14:35846 (R;US)
BUCKSHOT simulations of beam injection on the recirculating linac, 14:37093 (R;US)
Communication techniques for safely transmitting and verifying unique signals, 14:37157 (R;US)
Compound-lens diode for HERMES III, 14:37092 (R;US)
Computer site threat identification and analysis, 14:37809 (R;US)
Damage predictions for wind turbine components using the LIFE2 computer code, 14:36881 (R;US)
Demonstration of a performance assessment methodology for high-level radioactive waste disposal in basalt formations, 14:35792 (R;US)
Demonstrations of a real time personnel and material tracking system, 14:37791 (R;US)
Description of the NanoΔIndenter™; An ultra-low-load microhardness indentation test machine, 14:36996 (R;US)
Design of an advanced entry control system, 14:36886 (R;US)
Development of a thin wall graphite/polyimide composite pressure vessel with a large aspect ratio, 14:36884 (R;US)
Development of the BOLVAPS [Boil-Off Lithium VAPor Source] lithium vapor source for the PBFA-II [Particle Beam Fusion Accelerator II] accelerator, 14:37775 (R;US)
Diamagnetic shielding and flux creep in a Tl-Ba-Ca-Cu-O thin film, 14:36584 (R;US)
Droplet sizing calibration of the Phase Doppler Particle Analyzer, 14:37145 (R;US)
Effective implementation of safeguards and security requirements, 14:37790 (R;US)
Electrohydrodynamically driven, large-area liquid metal ion source for inertial confinement fusion, 14:37778 (R;US)
ELLIPSE user's manual and program reference, 14:37811 (R;US)
Energy accommodation modeling of rarefied flow over re-entry vehicle geometries using DSMC [Direct Simulation Monte Carlo], 14:36409 (R;US)
Evaluation of commercially available lighting design software, 14:36397 (R;US)
External ion beam analysis of the TFTR [Tokamak Fusion Test Reactor] bumper limiters, 14:37777 (R;US)
Field evaluation of new exterior video motion detection systems, 14:36892 (R;US)
Finite control volume modeling of laminar and turbulent flow of air in an enclosure, 14:37485 (R;US)
Formation, motion and high temperature superconductivity of large bipolarons, 14:37698 (R;US)
Guidelines for preparing a contractor safety plan, 14:37402 (R;US)

Health effects models for nuclear power plant accident consequence analysis: Low LET radiation: Part 2, Scientific bases for health effects models, 14:37380 (R;US)
Interstage closure times for the rimfire multistage gas switch, 14:37773 (R;US)
Investigation of cask contamination weeping: A progress report, 14:36888 (R;US)
Ion diode experiments on PBFA [Particle Beam Fusion Accelerator] II: Workshop on applications of high power switching, 14:37780 (R;US)
Ion production on the PI-110A accelerator, 14:37776 (R;US)
Jitter improvement of the 12-MV oil switches on Aurora, 14:36882 (R;US)
LineCAP [Line/Circuit Analysis Program]: Cross-coupling on PC [printed circuit] board traces including discontinuities and circuit elements, 14:37015 (R;US)
Management Information Database System, 14:37822 (R;US)
Mechanisms that control the geometry of pulsed Nd:YAG laser welds, 14:36583 (R;US)
MHD calculations of anode plasmas, 14:37483 (R;US)
Modular economical PC-based alarm display system, 14:35845 (R;US)
Numerical analysis of designs to reduce the kinetic energy of Davis Gun pusher plates, 14:36889 (R;US)
Numerical analysis of experimental data to infer plasma opening switches, 14:37016 (R;US)
Numerical solution of the Navier-Stokes equations for three-dimensional incompressible flows with open boundaries, 14:37484 (R;US)
On the limitation of the weak-coupling assumption for crosstalk analysis in an inhomogeneous medium, 14:35975 (R;US)
Pairing in CuO_2 driven by exchange interactions between carriers and localized Cu spins, 14:37476 (R;US)
PDC [polycrystalline diamond compact] bit research at Sandia National Laboratories, 14:35943 (R;US)
Performance of plasma opening switches for the Particle Beam Fusion Accelerator II (PBFA II), 14:37774 (R;US)
Phonon-drag thermoelectric power in high magnetic fields in heterojunctions, 14:37689 (R;US)
Photocurrent variability of discrete bipolar devices, 14:37017 (R;US)
Preliminary analyses in support of in situ thermomechanical investigations, 14:35809 (R;US)
Quantitative infrared spectroscopy of glucose in blood using partial least-squares analyses, 14:37300 (R;US)
Research drilling in young silicic volcanoes, 14:37413 (R;US)
Scattering from fractals, 14:37690 (R;US)
Science guide for the Long Valley Caldera deep hole, 14:37412 (R;US)
Standard terminal panel and UPS [uninterruptible power supply] design for exterior intrusion detectors and data collection applications, 14:37018 (R;US)
Status of light ion approach inertial confinement fusion, 14:37779 (R;US)
Strain to failure of pressurized thick wall cylinders, 14:36995 (R;US)
Stress in dilute suspensions, 14:37482 (R;US)
Systems analysis, long-term radionuclide transport, and dose assessments, Waste Isolation Pilot Plant (WIPP), southeastern New Mexico; March 1989, 14:35811 (R;US)
Target cueing and tracking system for safeguards and security, 14:35851 (R;US)
Techniques for the detection of explosives, 14:37149 (R;US)
The assess facility descriptor module, 14:35847 (R;US)

The effects of snow on landmarks in K_u band SAR images, 14:37144 (R;US)
The Outsider interruption algorithm, 14:35849 (R;US)
The PVF2 piezoelectric polymer shock stress sensor: System characterization for application under field test conditions, 14:36891 (R;US)
Thermal strains in a bimaterial joint: Experimental and numerical analysis, 14:36586 (R;US)
Thermal-conductivity data for tuffs from the unsaturated zone at Yucca Mountain, Nevada: Yucca Mountain Project, 14:35807 (R;US)
TRACE - Tamper Resistant Authenticated Camera Enclosure, 14:36890 (R;US)
TRUPACT I filter development: Status report, 14:36883 (R;US)
Two-dimensional effects in hollow core Z-pinches, 14:37743 (R;US)
Two-dimensional effects in imploding plasma liners, 14:37742 (R;US)
Ultrasonic systems and system development at SNL Albuquerque, 14:36997 (R;US)
Using conjoint meshing primitives to generate quadrilateral and hexahedral elements in irregular regions, 14:37810 (R;US)
Waste Isolation Pilot Plant brine field pH measurements: Technique and interpretation, 14:35810 (R;US)

Sandia National Labs., Livermore, CA (USA)
Coal combustion science: Quarterly progress report, January–March 1989, 14:35592 (R;US)
Nonlinear dynamic response of pressurized composite bottles subjected to shock loading, 14:36885 (R;US)

Sargent and Lundy, Chicago, IL (USA)
A comparison of steam-injected gas turbine and combined-cycle power plants: Technology assessment: Final report, 14:35955 (R;US)

Saskatchewan Univ., Saskatoon, SK (Canada)
Study of the conversion of lignocellulosic (aspen) materials to liquid fuels and chemicals, 14:35862 (R;CA)

Saskatchewan Univ., Saskatoon, SK (Canada). Dept. of Geography
A guide to socio-economic impact monitoring in the Northwest Territories, 14:37283 (R;CA)

Savannah River Lab., Aiken, SC (USA)
Life extension approach to the reactor vessel of a nuclear production reactor: Revision 1, 14:36126 (R;US)
Solidification of low-level radioactive waste at the Savannah River Site, 14:35818 (R;US)

Scanda Consultants Ltd., Ottawa, ON (Canada)
The influence of flue sharing on venting performance, 14:37025 (R;CA)
The influence of termination configuration on the flow performance of flues, 14:37024 (R;CA)

Science Applications International Corp., San Diego, CA (USA). Energy Projects Div.
An improved design for stretched-membrane heliostats, 14:35926 (R;US)

Science Council of Canada, Ottawa, ON (Canada). Committee on Industrial Policies
Airborne contaminants and aquatic systems. An assessment of research needs, 14:37395 (R;CA)

Seattle Engineering Dept., WA (USA). Solid Waste Utility
Final Environmental Impact Statement. Qaste reduction, recycling, and disposal alternatives. Recycling potential assessment and waste stream forecast. Volume 2, 14:36434 (R;US)

Selskapet for Industriell og Teknisk Forskning, Trondheim (Norway)
Oil at shore and in deposits. Succesive report 1987, 14:35662 (R;NO;In Norwegian)

Serata Geomechanics, Inc., Richmond, CA (USA)
High-performance, intrinsically safe data-acquisition system for underground use. Final report, October 1984-December 1984, 14:35575 (R;US)

SFA Pacific, Inc., Mountain View, CA (USA)
A fundamental research program in coal/heavy oil coprocessing and heavy oil processing: Final report, 14:35523 (R;US)

Shell Research Ltd., Chester (UK)
HEGADAS: heavy gas dispersion program. User's guide, 14:37178 (R;GB)

Sociedade Brasileira de Geologia, Recife, PE (Brazil). Nucleo do Nordeste
Contribution to origin of the reefs in northeastern, 14:37208 (R;BR;In Portuguese)
Deformations in structure of the scapolites from northeast, Brazil, 14:36708 (R;BR;In Portuguese)
Mineralogical behavior of the phosphatic sedimentation in Pernambuco-Paraiba sedimentar coastal basin, 14:37209 (R;BR;In Portuguese)

Mineralogy of bismutotanitalite from Northeastern. Brazil, 14:37210 (R;BR;In Portuguese)
Petrology and mapping of Fe and Ti occurences in Passira country, PE, Brazil, 14:36709 (R;BR;In Portuguese)

Solar Energy Research Inst., Golden, CO (USA)
Biofuels technical information guide, 14:35909 (R;US)
Fuels from microalgae, 14:35910 (R;US)
Materials analysis and device optimization of $CuInSe_2$ solar cells: Annual subcontract report, 16 January 1987–15 January 1988, 14:35913 (R;US)
Photovoltaics advanced research and development: 9th annual review meeting, 14:35908 (R;US)
Polycrystalline cadmium telluride n-i-p solar cell: Annual subcontract report, 1 June 1987–31 August 1988, 14:35912 (R;US)
Progress in parabolic dish technology, 14:35930 (R;US)
Research on stable, high-efficiency, large-area, amorphous-silicon-based submodules, Task B: Semiannual subcontract report, 16 March 1988–15 September 1988, 14:35914 (R;US)
Solar thermal program summary: Volume 2, Research summaries: Fiscal year 1988, 14:35925 (R;US)
Three-dimensional airfoil performance measurements on a rotating wing, 14:35952 (R;US)
Two-terminal $CuInSe_2$-based cascade cells: Annual subcontract report, 16 January 1987–15 January 1988, 14:35911 (R;US)

Southeastern Universities Research Association, Newport News, VA (USA). Continuous Electron Beam Accelerator Facility

Ecophysiology and adaptation in desert shrubs: Final report, 14:37206 (R;US)

V

Vanguard Technologies, Inc., Ogden, UT (USA)
Guidelines for quality records in electronic media for nuclear facilities (NCIG-10): Final report, 14:36047 (R;US)

Varian Associates, Inc., Palo Alto, CA (USA). Varian Research Center
High-temperature superconductivity. Quarterly report No. 1 for period ending FY89, 14:36613 (R;US)

Versar, Inc., Springfield, VA (USA)
Summary report of capacity at commercial facilities. Volume 1. Summary report, 14:36435 (R;US)
Summary report of capacity at limited commercial and company-captive facilities. Volume 1. Draft report, 14:36436 (R;US)
Summary report of capacity at limited commercial and company-captive facilities. Volume 2. Draft report, 14:36437 (R;US)

Virginia Univ., Charlottesville, VA (USA). Dept. of Environmental Sciences
Trajectory analysis of nine years of precipitation chemistry in Charlottesville, Virginia: Final report, 14:37165 (R;US)

W

Warsaw Univ. (Poland)
Gas-liquid flow in dividing Tee-junctions with a horizontal inlet and different branch orientations and diameters, 14:36981 (R;DE)

Washington Metropolitan Area Transit Authority, DC (USA)
History of the negotiations of the Washington Metropolitan Area Transit Authority, 14:36408 (R;US)

Washington State Univ., Pullman, WA (USA). Dept. of Geology
Comparison of spectral data gathered from a laboratory spectrometer and TM images with and without shadow correction, 14:37404 (R;US)

Washington Univ., Seattle, WA (USA). Nuclear Physics Lab.
Superconducting booster project: [Final report], 14:37072 (R;US)

Wayne State Univ., Detroit, MI (USA)
Josephson effect research in high-temperature superconductors. Interim report, 30 September 1987-29 September 1988, 14:36609 (R;US)

West Virginia Univ., Morgantown, WV (USA). Dept. of Chemical Engineering
Deactivation of hydrotreatment catalysts used for coal liquids: Semi-annual report, 12 May 1988–11 November 1988, 14:35525 (R;US)

Western Research Inst., Laramie, WY (USA)
Development of an advanced process for drying fine coal in an inclined fluidized bed: Technical progress report for the second quarter, January 19–March 31, 1989, 14:35513 (R;US)

Westinghouse Electric Corp., Pittsburgh, PA (USA). Research and Development Center
Solid-oxide fuel-cell technology development. Annual report, May 1, 1987-April 30, 1988, 14:36365 (R;US)

Westinghouse Hanford Co., Richland, WA (USA)
Assessment of Basalt Waste Isolation Project's borehole mud pits soils and sediments for chemical constituents: Summary report, 14:35814 (R;US)
ASTM C-26 committee and standards development, 14:35745 (R;US)
Creep-fatigue assessment methods using elastic analysis results and adjustments, 14:36588 (R;US)
Evaluation of the advanced mixed oxide fuel test FO-2 irradiated in Fast Flux Test Facility, 14:36037 (R;US)
Fast Flux Test Facility metal fuel pin fabrication, 14:35759 (R;US)
Fast Flux Test Facility passive safety reactivity feedback measurements, 14:36034 (R;US)
FFTF metal fuel pin sodium bond quality verification, 14:36036 (R;US)
Liquid effluent study project plan, 14:35815 (R;US)
Tank farm surveillance and waste status summary report for April 1989, 14:35813 (R;US)
The texture variation in extruded graphite, 14:36663 (R;US)
Thermo-plastic analysis of a bowed sodium pump shaft, 14:36035 (R;US)
Westinghouse Hanford Company 100 Areas environmental releases for 1987, 14:35812 (R;US)

Westinghouse Hanford Co., Shippingport, PA (USA)
Shippingport Station Decommissioning Project preparation of the reactor pressure vessel: Topical report, 14:35784 (R;US)

Westinghouse Idaho Nuclear Co., Inc., Idaho Falls, ID (USA)
Evaluation of minimum-fluidizing velocity correlations for bed particles used in fluidized-bed calcination processes, 14:35816 (R;US)

Westinghouse Materials Co. of Ohio, Cincinnati, OH (USA). Feed Materials Production Center
Implementing requirements for radiation worker training from DOE Order 5480.11, 14:35754 (R;US)

Westinghouse Savannah River Co., Aiken, SC (USA)
Experimental facilities for pyrochemical development at the Savannah River Site, 14:35817 (R;US)
Managing data from a large-scale groundwater monitoring program, 14:37255 (R;US)

Wisconsin Univ., Madison, WI (USA)
Proposed activity - Budget for research in high energy physics: Technical progress report, January 1, 1990–December 31, 1994, 14:37491 (R;US)

Wisconsin Univ., Madison, WI (USA). Dept. of Electrical and Computer Engineering
Electromagnetic transients program (EMTP): Volume 3, Workbook III: Final report, 14:35954 (R;US)

Wuerzburg Univ. (Germany, F.R.). Medizinische Fakultaet
Radiation injuries of the intestine, treated in the Surgical Department of Wuerzburg University Hospital between 1974 and 1982, 14:37355 (R;DE;In German)
UW 21/123 monoclonal antibody in the radioimmunological detection of tumour tissue in the head and neck region, 14:37318 (R;DE;In German)

Y

Yale Univ., New Haven, CT (USA). Dept. of Computer Science
CFD (computational fluid dynamics) research for mini-supercomputers: a Yale/UTRC program. Final report, 15 February 1987-14 October 1988, 14:37478 (R;US)

Z

Zenon Environmental, Inc., Burlington, ON (Canada)
Review of environmental monitoring equipment for air, water and soil systems. Vol. 2(iii)-Equipment data sheets. Record #529-586, user and utility information records, 14:35964 (R;CA)
Review of environmental monitoring equipment for air, water and soil systems. Vol 2(ii)-Equipment data sheets. Record #247-528, 14:35965 (R;CA)
Review of environmental monitoring equipment for air water and soil systems. Vol. 2-Environmental monitoring equipment database, 14:35966 (R;CA)
Review of environmental monitoring equipment for air, water and soil systems. Vol. 1 - Instrument review, 14:35967 (R;CA)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, *EDB Subject Thesaurus* (DOE/OSTI-7000). In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

ACES
See QUARKS

ACETALDEHYDE
Studies as to the measurement and the chemistry of formaldehyde and acetaldehyde in the lower troposphere, 14:37171 (R;DE;In German)

ACETATES
Identification and characterization of reaction steps and enzyme catalysts involved in the conversion of acetate and methyl groups to methane. Final report, October 1984-October 1987, 14:35860 (R;US)

ACETIC ALDEHYDE
See ACETALDEHYDE

ACETONE
Macromolecular coal structure as revealed by novel diffusion tests: Quarterly technical report, January 15, 1989–April 15, 1989, 14:35553 (R;US)

ACETYLACETONE
Complex formation of lanthanide(111) with acetylacetone studied by the akufve-lison technique, 14:36827 (RA;SU)
Hydration and solvation energies and thermodynamic distribution coefficient of some extraction systems (Extraction systems: TBP-UO_2Cl_2($ThCl_4$)-HCL; AA-$InCl_3$-HCl, where AA-acetylacetone.), 14:36825 (RA;SU)
Role of the liquid-liquid partition coefficient of the extractable chelate in the extraction efficiency of metals with β-diketones (Metals: rare earths, scandium, yttrium.), 14:36819 (RA;SU)

ACID ELECTROLYTE FUEL CELLS
Improved acid electrolytes for fuel cells. Final report, July 1985-January 1989, 14:36364 (R;US)
Improved acid electrolytes: synthesis and structure of fluorine-containing sulfonic acids for fuel cells. Final report, July 1987-August 1988, 14:36363 (R;US)

ACID RAIN
Acid rain and agricultural production in Ontario, 14:37218 (RA;CA)
Airborne contaminants and aquatic systems. An assessment of research needs, 14:37395 (R;CA)
Characterization of painted surfaces in the United States from the perspective of potential damage from acidic deposition, 14:37163 (R;US)
Effects of ozone and simulated acid rain on mycorrhizal infection in two families of Pinus taeda L, 14:37336 (J;US)
Evaluation of the impact of acid deposition on Eastern Canada's sport fishery, 14:37390 (RA;CA)
Fiscal year 1987 program report (Massachusetts Water Resources Research Center). Annual report, 14:37280 (R;US)
National Performance Audit Program; ambient air audits of analytical proficiency, 1987, 14:37189 (R;US)
Observations of lake trout (Salvelinus namaycush) spawning behaviour in low pH lakes near Sudbury, Ontario, 14:37391 (R;CA)
Preliminary assessment of the current impact and potential risk of acidic deposition on walleye populations in Ontario, 14:37392 (R;CA)
[Fifth international congress of plant pathology, Kyoto, Japan, August 23–27, 1988]: Foreign trip report, 14:37175 (R;US)

ACIDIFICATION
Acidity of surface water in Norway, 14:37242 (RA;NO)
Conceptual model for analysing soil and groundwater acidification on regional scale. International symposium on acidification and water pathways, 14:37239 (RA;NO)

Effects of air pollutants on groundwater quality in the Federal Republic of Germany, 14:37241 (RA;NO)
Mathematical model for podzolic soil profiles exposed to acid deposition, 14:37272 (RA;NO)
Modelling long term stream acidification trends in upland Wales, 14:37271 (RA;NO)
Prediction models for acidification, 14:37270 (RA;NO)
Quality of surface water evolution during snowmelt. International symposium on acidification and water pathways, 14:37238 (RA;NO)

LITHIUM COMPOUNDS
POTASSIUM COMPOUNDS

Absorption Spectroscopy
Extraction separation of matrix during flame-photometric and atomic-absorption determination of Li, Rb, Cs in alkaline earth element salts, 14:36714 (RA;SU;In Russian)

Chemical Preparation
Formation conditions and some properties of double nitrates of rare alkali metals and rare earths, 14:36781 (RA;SU;In Russian)
Study of physicochemical properties of alkali metal salts of 12-tungstogallic acid, 14:36768 (RA;SU;In Russian)
Sulfates of rare alkali metals, 14:36799 (RA;SU;In Russian)
Synthesis and structure of mixed by cation ternary vanadates $Me_2MeLn(VO_4)_2$, 14:36745 (RA;SU;In Russian)

Chemical Reactions
Physicochemical study of the systems BiI_3-M^1I (M^1-Li, Na, K, Rb, Cs) and properties of forming compounds, 14:36796 (RA;SU;In Russian)
Study of interaction in ternary bromide systems of lithium, sodium, rubidium, cesium, cadmium, barium, calcium, and lead, 14:36791 (RA;SU;In Russian)
Systems MVO_3-$Zn(VO_3)_2$ and MVO_3-$Mn(VO_3)_2$, where M=Li, Rb, Cs, 14:36770 (RA;SU;In Russian)

Crystal Structure
Regularities of structure and properties of mixed oxides of the composition $ABTeO_6$ (A-K, Rb, Cs, Tl; B-Nb, Ta, Sb), 14:36795 (RA;SU;In Russian)
Synthesis and structure of mixed by cation ternary vanadates $Me_2MeLn(VO_4)_2$, 14:36745 (RA;SU;In Russian)

Crystallization
Condensed phosphates of rare earth and rare alkali elements, 14:36751 (RA;SU;In Russian)
Synthesis and physicochemical study of double chlorides, nitrates, sulfates of rubidium and cesium with calcium, lanthanum, neodymium, ytterbium, 14:36782 (RA;SU;In Russian)

Electric Conductivity
Electric conductivity of ternary phosphates and vanadates of alkali and rare earth metals (Alkali metals: K, Rb, Cs; rare earths: Pr, Ho, Gd.), 14:36746 (RA;SU;In Russian)

Formation Free Enthalpy
Thermodynamic properties of alkali metal chalcogenates, chromates, molybdates, and tungstates, 14:36764 (RA;SU;In Russian)

Formation Heat
Thermodynamic properties of alkali metal chalcogenates, chromates, molybdates, and tungstates, 14:36764 (RA;SU;In Russian)

Fusion Heat
Enthalpies of melting and polymorphic transformations of alkali metal molybdates, tungstates, and chromates, 14:36761 (RA;SU;In Russian)
Glass
Condensed phosphates of rare earth and rare alkali elements, 14:36751 (RA;SU;In Russian)
Infrared Spectra
Connection between structure of alkali metal molybdates and tungstates and their spectral and energetic characteristics, 14:36763 (RA;SU;In Russian)
Ion Exchange
Regularities of structure and properties of mixed oxides of the composition $ABTeO_6$ (A-K, Rb, Cs, Tl; B-Nb, Ta, Sb), 14:36795 (RA;SU;In Russian)
Melting Points
Low-melting alloys of halide and nitrate systems of alkali and alkaline earth metals and their practical use, 14:36785 (RA;SU;In Russian)
Molecular Structure
Connection between structure of alkali metal molybdates and tungstates and their spectral and energetic characteristics, 14:36763 (RA;SU;In Russian)
Permittivity
Electric conductivity of ternary phosphates and vanadates of alkali and rare earth metals (Alkali metals: K, Rb, Cs; rare earths: Pr, Ho, Gd.), 14:36746 (RA;SU;In Russian)
Phase Diagrams
Formation conditions and some properties of double nitrates of rare alkali metals and rare earths, 14:36781 (RA;SU;In Russian)
Low-melting alloys of halide and nitrate systems of alkali and alkaline earth metals and their practical use, 14:36785 (RA;SU;In Russian)
Physicochemical study of the systems BiI_3-M^1I (M^1-Li, Na, K, Rb, Cs) and properties of forming compounds, 14:36796 (RA;SU;In Russian)
Solubility of sulfates and oxalates of alkaline earth metals in aqueous solutions of alkali metal salts (Alkali metals: Li-Cs.), 14:36800 (RA;SU;In Russian)
Study of interaction in ternary bromide systems of lithium, sodium, rubidium, cesium, cadmium, barium, calcium, and lead, 14:36791 (RA;SU;In Russian)
Sulfates of rare alkali metals, 14:36799 (RA;SU;In Russian)
Synthesis and physicochemical study of double chlorides, nitrates, sulfates of rubidium and cesium with calcium, lanthanum, neodymium, ytterbium, 14:36782 (RA;SU;In Russian)
Systems MVO_3-$Zn(VO_3)_2$ and MVO_3-$Mn(VO_3)_2$, where M=Li, Rb, Cs, 14:36770 (RA;SU;In Russian)
Pyrolysis
Study of physicochemical properties of alkali metal salts of 12-tungstogallic acid, 14:36768 (RA;SU;In Russian)
Quantitative Chemical Analysis
Determination of microimpurities of alkali and alkaline earth elements in lithium and cesium salts of high purity and in monocrystals on their basis, 14:36711 (RA;SU;In Russian)
Extraction separation of matrix during flame-photometric and atomic-absorption determination of Li, Rb, Cs in alkaline earth element salts, 14:36714 (RA;SU;In Russian)
Transition Heat
Enthalpies of melting and polymorphic transformations of alkali metal molybdates, tungstates, and chromates, 14:36761 (RA;SU;In Russian)

ALKALI METALS

CALCIUM COMPOUNDS
STRONTIUM COMPOUNDS
Determination of microimpurities of alkali and alkaline earth elements in lithium and cesium salts of high purity and in monocrystals on their basis, 14:36711 (RA;SU;In Russian)
Extraction separation of matrix during flame-photometric and atomic-absorption determination of Li, Rb, Cs in alkaline earth element salts, 14:36714 (RA;SU;In Russian)
Low-melting alloys of halide and nitrate systems of alkali and alkaline earth metals and their practical use, 14:36785 (RA;SU;In Russian)
Metastable ordered compounds formed during epitaxial growth, 14:36539 (BA;FR)
Solubility of sulfates and oxalates of alkaline earth metals in aqueous solutions of alkali metal salts (Alkali metals: Li-Cs.), 14:36800 (RA;SU;In Russian)
Study of interaction in ternary bromide systems of lithium, sodium, rubidium, cesium, cadmium, barium, calcium, and lead, 14:36791 (RA;SU;In Russian)

Transport in metal alloys and resistivity saturation, 14:37695 (BA;US)

ALPHA BEAMS
Selective population of the highest spin n-p states in heavy nuclei via the (α, d) reaction at 218 MeV, 14:37588 (R;FR)

ALPHA SPECTRA
Program listings for GRPANL: A suite of computer programs for analyzing complex Ge and alpha-particle detector spectra: Volume 3, 14:37120 (R;US)

ALPHA-BEARING WASTES
1988 DOE model conference proceedings: Volume 1, 14:35771 (R;US)
TRUEX process laboratory studies with Hanford complexant concentrate waste: Part 2, Test for solvent poisoning, 14:35806 (R;US)
Treatment needs for Greater-Than-Class C low-level waste, 14:35804 (R;US)

ALUMINIA
See ALUMINIUM OXIDES

ALUMINIUM
Aluminium dynamics in response to experimental additions of acid to a small Norwegian stream, 14:37266 (RA;NO)
Effect of high pressures on the mobility of atoms in grain boundaries, 14:36516 (BA;FR)
Effect of the triple junction on grain-boundary sliding in aluminum tricrystals, 14:36524 (BA;FR)
Energy and structure of [100] aluminum grain boundary, 14:36519 (BA;FR)
Evolution of the chemistry of passive films of sputter-deposited, supersaturated Al alloys. Annual report, 1 July 1987-30 November 1988, 14:36461 (R;US)
Increased acidity and aluminium concentration in streams following afforestation: Causative mechanisms and processes, 14:37243 (RA;NO)
Introduction of experience of television information-control systems in welding, 14:36569 (RA;SU;In Russian)
Mechanical behaviors of SiC whisker reinforced Al composites by powder metallurgical process, 14:36528 (BA;FR)
Novel approaches to ionic chromatography: Progress report, December 1, 1987–June 30, 1989, 14:36707 (R;US)
Phase equilibria and interfacial phenomena in the Mg-Al-O system at 800°C, 14:36500 (BA;FR)
Reaction kinetics of phase formation in Nb-Al powder metallurgy processed wire, 14:36944 (J;US)
Search for experimentally observed grain boundary phase transitions, 14:36498 (BA;FR)
Simulation study of interfaces in Ni, Al and Ni_3Al with and without boron, 14:36488 (BA;FR)
Strain-induced boundary migration (SIBM) in aluminum bicrystals each with a (211) tilt boundary, 14:36525 (BA;FR)
Structure of asymmetrical tilt boundaries formed during creep of (112) oriented aluminum single crystals, 14:36493 (BA;FR)
TEM study of ZrO_2/Al interface, 14:36629 (BA;FR)
The preparation of mechanically alloyed powders for TEM examination, 14:36596 (BA;US)

ALUMINIUM 27 TARGET
Fast-fission component with small mass drift in the reaction $^{84}Kr + {}^{27}Al$ at E_{Lab} = 5.9 MeV/u, 14:37587 (R;FR)
Survey of results from Brookhaven Experiment 802 at the AGS, 14:37596 (R;US)

ALUMINIUM ALLOYS
See also ALUMINIUM BASE ALLOYS
An Auger sputter profiling study of nitrogen and oxygen ion implantation in two titanium alloys, 14:37688 (R;US)
Application of the embedded atom method to the fracture of interfaces, 14:36514 (BA;FR)
Breakdown mechanisms of Al_2O_3, Cr_2O_3 and SiO_2 scales in $H_2/H_2O/H_2S$ environments: Final report, Volume 1, 14:35538 (R;US)
Cyclic migration and fracture in solid solution alloys, 14:36988 (BA;FR)
Dynamic studies of deformation and fracture at grain boundaries, 14:36533 (BA;FR)
Effect of chromium on early stages of oxidation of Ni_3Al alloys at 600°C, 14:36608 (J;US)
Effect of grain-boundary structure on stress corrosion cracking in αCu-Al alloy bicrystals, 14:36536 (BA;FR)
Electronic theory for grain boundary segregation and embrittlement of intermetallic compound Ni_3Al, 14:36518 (BA;FR)
Evolution of the chemistry of passive films of sputter-deposited, supersaturated Al alloys. Annual report, 1 July 1987-30 November 1988, 14:36461 (R;US)
Grain boundary structure in Ni_3Al, 14:36492 (BA;FR)

Hydrogen embrittlement in grain boundaries studied by fatigue crack propagation in Al-Zn-Mg bicrystals, 14:36987 (BA;FR)
Optical properties of metals and alloys: Au, Ag, FeRh, $AuAl_2$, and $PtAl_2$, 14:36604 (D;US)
Reaction kinetics of phase formation in Nb-Al powder metallurgy processed wire, 14:36944 (J;US)
Sulfidation/oxidation properties of iron-based alloys containing niobium and aluminum, 14:35539 (R;US)
The failure of aluminum compact shear specimens under mixed-mode loading, 14:36597 (BA;US)
[2nd international symposium on high-temperature corrosion of advanced materials and coatings, Les Embiez, France, and visit to Manchester, England, May 19–27, 1989]: Foreign trip report, 14:35536 (R;US)

ALUMINIUM ARSENIDES
Lattice relaxation of the DX centers in $Ga_{1-x}Al_xAs$ and of the pressure-induced deep donors in GaAs, 14:36699 (BA;US)
Pressure-dependent DLTS experiments on Si-doped AlGaAs, 14:36700 (BA;US)

ALUMINIUM BASE ALLOYS
New generation of welded semiautomatic for production of structures out of steels and aluminium alloys, 14:36566 (RA;SU;In Russian)
Optimization of technological parameters of welding process by stabilized arc of reverse polarity, 14:36562 (RA;SU;In Russian)

ALUMINIUM CARBIDES
High resolution electron microscopy of interfaces in functional materials, 14:36623 (BA;FR)

ALUMINIUM NITRIDES
Atomic structure of vitreous interfacial films in sialon, 14:36671 (BA;FR)
Cu-AlN interface: electronic structure and adhesion, 14:36542 (BA;FR)
HVEM and HREM of interfaces in aluminum nitride ceramics, 14:36624 (BA;FR)

ALUMINIUM OXIDES
Atomic structure of vitreous interfacial films in sialon, 14:36671 (BA;FR)
Breakdown mechanisms of Al_2O_3, Cr_2O_3 and SiO_2 scales in $H_2/H_2O/H_2S$ environments: Final report, Volume 1, 14:35538 (R;US)
Contribution of lattice matching to the interfacial energy between dissimilar materials, 14:36622 (BA;FR)
Hetero- and homo-phase boundaries in ceramic oxides, 14:36626 (BA;FR)
Influence of doping elements on the grain boundary characteristics in alumina, 14:36632 (BA;FR)
Phase equilibria and interfacial phenomena in the Mg-Al-O system at 800°C, 14:36500 (BA;FR)
Subcritical crack growth in metal-ceramic-interfaces, 14:36986 (BA;FR)
The amorphous to gamma transformation in ion implanted Al_2O_3, 14:36618 (R;US)
The role of acid-base site in the preparation of $A1_20_3$-supported platinum catalysts, 14:36734 (RA;CA)

ALUMINIUM SILICATES
Interfacial characteristics of glass-ceramic matrix/SiC fiber composites, 14:36634 (BA;FR)

ALUMINUM
See ALUMINIUM

AMERICIUM
Sorption of radionuclides on London clay, 14:37224 (R;GB)

AMIDES
See also UREA
Metal extraction by amides of carboxylic acids, 14:36719 (RA;SU)

AMINES
See also QUATERNARY COMPOUNDS
TOA
Determination of thermodynamic characteristics of extraction equilibria in the systems containing ammonium salts and organic phosphorus compounds (Solvent extraction of nitrates of Ce, Pr, Eu, UO_2^{2+}, Th.), 14:36717 (RA;SU)
Equilibrium on metal extraction with substituted ammonium salts effect of non-ideality of the organic phase, 14:36861 (RA;SU)
Extractants for boron, 14:36836 (RA;SU)
Prediction and control of extraction ability and some physicochemical properties of extractants (Solvent extraction of actinides and rare earths.), 14:36859 (RA;SU)
Some possibilities for improvement of the extraction properties in mixed extraction systems, 14:36838 (RA;SU)
State of water in extracts and its interaction with microwave field, 14:36824 (RA;SU)

AMINO ACIDS
See also THYROXINE
Optimization of separation efficiency in capillary zone electrophoresis, 14:36731 (BA;US)

AMINO ALCOHOLS
See ALCOHOLS
AMINES

AMINO SUGARS

ANALYSIS (THERMAL)
See THERMAL ANALYSIS

ANESTHETICS
Health-hazard evaluation determination report No. 75-151-259, Winchester Hospital, Winchester, Massachusetts, 14:37184 (R;US)

ANGIOGRAPHY
See BIOMEDICAL RADIOGRAPHY

ANGULAR CORRELATION
Implementation of computer programmes for fitting of positron annihilation spectra on "personal computers". Final report for the period 1 May 1986 - 14 June 1988, 14:37468 (R;XA)

ANHYDRIDES
Study of improved methods for predicting chemical equilibria: Composite technical progress report, July 1, 1986–June 30, 1989, 14:36739 (R;US)

ANIMAL CELLS
See also TUMOR CELLS
In vitro radiosensitivity of human malignant melanoma cells to low and high LET radiation, 14:37350 (RA;AU)
Inducible cellular responses to DNA damage, 14:37387 (RA;US)
Radiation sensitivity of human natural killer cells recognising bone marrow targets, 14:37352 (RA;AU)

ANIONS
Windows on the axion, 14:37517 (R;US)

ANISOTROPY
Polycrystal plasticity as applied to the problem of in-plane anisotropy in rolled cubic metals, 14:36572 (R;US)

ANNEALING
Ab-initio calculation of the microscopic properties of a grain boundary in germanium, 14:36487 (BA;FR)

ANNUAL CYCLE ENERGY SYSTEM
An annual storage ice system for summer cooling, 14:36209 (RA;CA;In English and French)
The "Fabrikaglace" process to make and store natural ice, 14:36208 (RA;CA;In English and French)

ANODES
Impedance spectroscopy for the study of anodic copper dissolution in sulfuric acid in presence of benzotriazole, 14:36367 (BA;US)
The nature and composition of the passive film formed on Ni-P-Cr metallic glasses, 14:36366 (BA;US)

ANOXIA
Induction of VL30 element expression as a response to anoxic stress, 14:37388 (RA;US)

ANTHRACENE
Study of improved methods for predicting chemical equilibria: Composite technical progress report, July 1, 1986–June 30, 1989, 14:36739 (R;US)

ANTHRAQUINONES
Supercritical fluid thermodynamics for coal processing: Quarterly progress report, September 15, 1988–December 31, 1988, 14:35529 (R;US)

ANTILAMBDA PARTICLES
Lambda-antilambda decay asymmetries and CP violation, 14:37504 (R;US)

ANTIMONY
Grain boundary electrical activity of n-type germanium, 14:36532 (BA;FR)

ANTINEUTRINO-ELECTRON INTERACTIONS
Elastic scattering of muon-neutrinos and muon-anti-neutrinos by electrons, 14:37499 (R;US)

ANTRIM SHALES
See BLACK SHALES

APPALACHIAN MOUNTAINS
Evaluating spatial patterns of forest productivity in a disturbed, mountainous landscape using LANDSAT data and a GIS, 14:37338 (J;US)

APPLIANCES
See also ELECTRIC APPLIANCES
STOVES
WATER HEATERS
WOOD BURNING APPLIANCES
Bibliography of the DOE building equipment research program, 14:36376 (R;US)

APPROXIMATION (BOHR)

AQUATIC ECOSYSTEMS
See also WETLANDS
Airborne contaminants and aquatic systems. An assessment of research needs, 14:37395 (R;CA)
Contribution to origin of the reefs in northeastern, 14:37208 (R;BR;In Portuguese)
Ocean waste disposal: outfall sewers. January 1977-April 1989 (Citations from the Selected Water Resources Abstracts data base). Report for January 1977-April 1989, 14:36441 (R;US)

AQUATIC ORGANISMS
See also FISHES
MANATEES
PLANKTON
AQUIRE: Aquatic Toxicity Information Retrieval data base. Data file, 14:37275 (R;US)
Effects of structure on scattering from marine organisms, 14:37250 (BA;US)
Immobilization of unicellular marine organisms for optical characterization, 14:37251 (BA;US)

AQUIFERS
Presentation of a software package for automated evaluation of soil heat storage projects, 14:36210 (RA;CA;In French)
The aquifer chill storage project at the University of Alabama, Tuscaloosa: Progress report for 1985 and 1986, 14:36218 (R;US)

ARC WELDING
See also GAS TUNGSTEN-ARC WELDING
Methods of deformation estimation of weldpool surfaces from action of localized pressure under through fusion, 14:36570 (RA;SU;In Russian)
New generation of welded semiautomatic for production of structures out of steels and aluminium alloys, 14:36566 (RA;SU;In Russian)

AREA POLLUTION SOURCES
See POLLUTION SOURCES

ARGENTINA
Geological and geophysical investigations at Sierra del Medio massif - Argentine, 14:37403 (R;AR)

ARGON
Molecular dynamics study of the structure and properties of twist boundaries, 14:36669 (BA;FR)

ARGON 40 REACTIONS
Multiple angular scattering of heavy ions $^{16-17}O$, ^{40}Ar, ^{86}Kr, ^{100}Mo at intermediate energies (20-90 MeV/u), 14:37682 (R;FR)
Multiplicity of neutrons from violent heavy-ion collisions: ^{40}Ar + Th and U from 10 to 77 MeV/u, 14:37603 (R;DE)

ARGON 40 TARGET
Fusion-fission of heavy systems: influence of the entrance channel mass asymmetry, 14:37578 (R;FR)

ARGON IONS
Dynamical aspects of violent collisions in Ar + Ag reactions at E/A = 27 MeV, 14:37472 (R;FR)

ARGONNE SUPERCONDUCTING LINAC
See ATLAS SUPERCONDUCTING LINAC

AROMATIC ACIDS
See CARBOXYLIC ACIDS

AROMATIC COMPOUNDS
See AROMATICS

AROMATICS
See also BENZENE
BIPHENYL
PHENOLS
Tritium labeling by thermally generated tritons, 14:36845 (R;US)

ARRAY PROCESSORS
Developing software to use parallel processing effectively. Final report, June-December 1987, 14:37797 (R;US)
Expert systems on multiprocessor architectures. Phase 1. Final report, March 1985-July 1987, 14:37795 (R;US)

ARSENIC
Critical phenomenon and segregation behavior at interfaces and subgrain boundaries, 14:36540 (BA;FR)
Ion exchange and soil attenuation of Gulf Coast and Great Plains soils: Final report, 14:37217 (R;US)

ARTIFICIAL LIFTS
Cold Lake artificial lift optimization, 14:35630 (RA;CA)

ASBESTOS
Evaluation of asbestos levels in two schools before and after asbestos removal. Final report, 14:37181 (R;US)
Release of dispersed asbestos fibres from soils, 14:37190 (R;GB)
Testing of hair dryers for asbestos emissions, 14:37180 (R;US)

ASH SEPARATORS
See INERTIAL SEPARATORS

ASHES
See also FLY ASH
Coal ash deposition, interaction with metal substrates and deposit build up: Summary report, 26 February 1989–25 May 1989, 14:35586 (R;US)
Coal-test program in a pressurized, fluidized-bed ash-agglomerating process development unit. Volume 2. Data analysis. Final report, November 15, 1984-August 31, 1987, 14:35544 (R;US)
Development of dredged ash disposal area: Johnsonville Fossil Plant: Final environmental assessment, 14:35564 (R;US)
Ion exchange and soil attenuation of Gulf Coast and Great Plains soils: Final report, 14:37217 (R;US)

ASPENS
Proceedings of the workshop on aspen pulp, paper and chemicals, 14:35900 (R;CA)

ASPHALTENES
Coking of oil sand, asphaltenes and residual oils in the LR-process, 14:35705 (RA;CA)
Upgrading of heavy crude at low-temperature and ambient-atmosphere, 14:35638 (RA;CA)

ATF TORSATRON
Panel discussion: Progress and plans for magnetic fusion: Summary of comments on recent progress in fusion research at the Oak Ridge National Laboratory, 14:37716 (R;US)
Recent results on cleaning and conditioning the ATF vacuum system, 14:37758 (R;US)

ATHABASCA DEPOSIT
Athabasca mineable oil sands. The RTR/Gulf extraction process theoretical model of bitumen detachment, 14:35717 (RA;CA)

Exploitation
AOSTRA underground test facility: mining access for research and production, 14:35721 (RA;CA)

Geologic Structures
A quantitative approach to the geological evaluation of the tar sands of south Athabasca, Alberta, 14:35697 (RA;CA)

In-Situ Combustion
A pressure observation well for monitoring and optimizing the pressure-up blowdown combustion process, 14:35711 (RA;CA)
Oil sands formation preheating study, 14:35714 (RA;CA)

Paleontology
The McMurray formation in the Athabasca oil sands area: an ichnological and paleontological perspective, 14:35695 (RA;CA)

Petroleum Geology
Geology and resources of the primrose crude bitumen deposits northeastern Alberta, 14:35696 (RA;CA)
Geology of the AOSTRA underground test facility site, 14:35698 (RA;CA)
Resource characterization of the central region of the lower Cretaceous McMurray/Wabiskaw deposit, Athabasca oil sands area, northeastern Alberta, 14:35699 (RA;CA)

Petroleum Refineries
OSLO project update and upgrader technology selection, 14:35729 (RA;CA)

Sedimentation
Fluvial, estuarine and shallow marine sedimentation in the Lower Cretaceous McMurray Formation and Wabiskaw Member (Clearwater Formation), in the central region, Athabasca oil sands area, northeastern Alberta, 14:35694 (RA;CA)

Steam Injection
Analysis and implementation of the steam assisted gravity drainage process at the AOSTRA UTF, 14:35708 (RA;CA)
Geotechnical instrument tation of the AOSTRA mine-assisted underground steaming trial, 14:35720 (RA;CA)
In situ oil sands temperature logging, 14:35725 (RA;CA)
Oil sands formation preheating study, 14:35714 (RA;CA)
Simulation of HASDrive UTF pilot, 14:35693 (RA;CA)

Stratigraphy
Fluvial, estuarine and shallow marine sedimentation in the Lower Cretaceous McMurray Formation and Wabiskaw Member (Clearwater Formation), in the central region, Athabasca oil sands area, northeastern Alberta, 14:35694 (RA;CA)
Resource characterization of the central region of the lower Cretaceous McMurray/Wabiskaw deposit, Athabasca oil sands area, northeastern Alberta, 14:35699 (RA;CA)
UNITAR/UNDP, 4th international conference on heavy crude and tar sand. Vol. 1, 14:35702 (R;CA)

Test Facilities
Geology of the AOSTRA underground test facility site, 14:35698 (RA;CA)

Underground Facilities
AOSTRA underground test facility: mining access for research and production, 14:35721 (RA;CA)
Geotechnical instrument tation of the AOSTRA mine-assisted underground steaming trial, 14:35720 (RA;CA)

ATLAS SUPERCONDUCTING LINAC
Superconducting low-velocity linac for the Argonne positive-ion injector, 14:37069 (R;US)

ATMOSPHERIC CHEMISTRY
Effects of trace gases on global atmospheric chemical and physical processes, 14:37195 (R;US)

ATMOSPHERIC PRECIPITATIONS
See also RAIN
SNOW
Use of representative field plots for the determination of hydrological flow-paths and associated hydrochemistry in studies of surface water acidification, 14:37261 (RA;NO)

ATMOSPHERIC PRESSURE
Pressure-dependent melting curve of natural carnallite, $KMgCl_3.6H_2O$, in a closed system, where evaporation is prevented, 14:37416 (R;DK)

ATOM COLLISIONS
See also ION-ATOM COLLISIONS
Density dependence of the momentum distribution in normal liquid ^4He, 14:37639 (R;US)

ATOMIC BOMBS
See NUCLEAR WEAPONS

ATOMIC EXPLOSIONS
See NUCLEAR EXPLOSIONS

ATOMIC PHYSICS
Studies of collisional and nonlinear radiative processes for development of coherent uv and xuv sources. Final report, 30 September 1985-29 September 1988, 14:37463 (R;US)

ATOMIC WEAPONS
See NUCLEAR WEAPONS

ATOMS
Physics of spin-polarized atomic vapors. Final report, 1 October 1986-30 April 1988, 14:37461 (R;US)

ATR REACTOR
Developing a performance based retraining program for the advanced test reactor (ATR) reactor operators and supervisors, 14:36113 (RA;US)
Development and implementation of quality based team and diagnostic skills training at the advanced test reactor, 14:36112 (RA;US)
Plant life extension program for the Advanced Test Reactor, 14:36114 (R;US)

AURORAE
See also POLAR-CAP AURORAE
Snapshots of high-latitude electrodynamics using Viking and DMSP f7 observations, 14:37447 (R;US)

AUSTENITIC STEELS
Studies on work-softening processes in the hot forming of austenitic steel, 14:36581 (TJ;US)

AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES

AUTOMOBILE INDUSTRY
See AUTOMOTIVE INDUSTRY

AUTOMOBILES
Program to assure good in-use vehicle emissions performance in the Federal Republic of Germany through improved compliance with standards. Final report, 14:36449 (R;DE;In German)

AUTOMOTIVE FUELS
Effect of a light-diesel blend formulated by BP on the performance and durability of an ADE 314 diesel engine, 14:36445 (R;ZA)

AUTOMOTIVE INDUSTRY
Health-hazard evaluation determination report No. 73-185-256, Electromotive-Division, GMC (Plant 2), Chicago, Illinois, 14:37186 (R;US)

AUXILIARY WATER SYSTEMS
Nuclear plant service water system aging degradation assessment: Phase 1, 14:36166 (R;US)

B

B MESONS
$B->X_s e^+e^-$ in the six-quark model, 14:37538 (J;NL)
Predictions about the decays of the B-mesons, 14:37516 (R;BR)

BACKGROUND RADIATION
Doses from natural sources of ionizing radiations and feasibilities of their restriction, 14:37658 (RA;SU;In Russian)

NRC TLD [thermoluminescent dosimeter] Direct Radiation Monitoring Network: Progress report, January–March 1989, 14:37228 (R;US)
Spectral measurements of the cosmic microwave background, 14:37441 (R;US)

BACTERIA

CESIUM TUNGSTATES

Absorption Spectroscopy
Atomic absorption determination of rubidium and cesium in complex objects, 14:36713 (RA;SU;In Russian)

Chemical Preparation
Double chromates of rubidium, cesium and rare earth elements, 14:36759 (RA;SU;In Russian)
Synthesis and phase transformations of double chromates of cesium rubidium and potassium with lithium, M^+LiCrO_4, 14:36758 (RA;SU;In Russian)
Synthesis and physicochemical properties of ammonium-containing fluoroaluminates of rare alkali elements, 14:36786 (RA;SU;In Russian)
Synthesis and study of some properties of mixed hexacyanoferrates (3) of rare alkali and alkaline-earth elements, 14:36789 (RA;SU;In Russian)

Chemical Reactions
Double sodium molybdates with rubidium and cesium, 14:36767 (RA;SU;In Russian)
NMR study of interactions of rare alkali metal ions (Li^+ and Cs^+) with Co^{2+} and Ni^{2+} in aqueous solutions, 14:36802 (RA;SU;In Russian)

Crystal-Phase Transformations
Synthesis and phase transformations of double chromates of cesium rubidium and potassium with lithium, M^+LiCrO_4, 14:36758 (RA;SU;In Russian)

Crystallization
Radioisotope determination of carbon impurities in cesium polyiodates, 14:36710 (RA;SU;In Russian)

Evaporation
Mass spectrometric study of evaporation of rubidium and cesium vanadates, 14:36771 (RA;SU;In Russian)

Infrared Spectra
Vibrational spectra and structure of vanadates $M_2Zn(VO_3)_4$, where M-Rb, Cs, 14:36775 (RA;SU;In Russian)

Molecular Structure
Vibrational spectra and structure of vanadates $M_2Zn(VO_3)_4$, where M-Rb, Cs, 14:36775 (RA;SU;In Russian)

Phase Diagrams
Double sodium molybdates with rubidium and cesium, 14:36767 (RA;SU;In Russian)
Effect of cesium ions on character of solubility and rare earth formate complexing processes, 14:36778 (RA;SU;In Russian)

Phase Studies
Double chromates of rubidium, cesium and rare earth elements, 14:36759 (RA;SU;In Russian)

Production
State of and trends in development of production of pure and high-pure compounds of lithium, rubidium and cesium, 14:36805 (RA;SU;In Russian)

Purification
State of and trends in development of production of pure and high-pure compounds of lithium, rubidium and cesium, 14:36805 (RA;SU;In Russian)

Pyrolysis
Synthesis and study of some properties of mixed hexacyanoferrates (3) of rare alkali and alkaline-earth elements, 14:36789 (RA;SU;In Russian)

Quantitative Chemical Analysis
Atomic absorption determination of rubidium and cesium in complex objects, 14:36713 (RA;SU;In Russian)
Radioisotope determination of carbon impurities in cesium polyiodates, 14:36710 (RA;SU;In Russian)

Solubility
Effect of cesium ions on character of solubility and rare earth formate complexing processes, 14:36778 (RA;SU;In Russian)

Sublimation Heat
Mass spectrometric study of evaporation of rubidium and cesium vanadates, 14:36771 (RA;SU;In Russian)

CESIUM FLUORIDES
Conversion methods for complex fluorides of rare alkali elements, 14:36803 (RA;SU;In Russian)
Cross-luminescence is a method of rare earth element electron structure investigation and physical base for subnanosecond scintillator operation, 14:37680 (RA;SU;In Russian)

CESIUM IODIDES
Granulation from melt of cesium iodide base compositions, 14:36808 (RA;SU;In Russian)
Preparation of cesium iodide of high purity, 14:36807 (RA;SU;In Russian)
Preparation of cesium iodide of high purity for low-background monocrystals, 14:36806 (RA;SU;In Russian)
X-ray fluorescence determination of bromides in cesium iodide with preliminary concentrating crystallization, 14:36712 (RA;SU;In Russian)

CESIUM NITRATES
On the interaction of cesium nitrate with zinc nitrate in saturated aqueous solution at 298 K, 14:36794 (RA;SU;In Russian)
Thermographic and X-ray diffraction study of binary systems based on rare alkali metal and thallium (1) nitrates and conditions of solid solution formation in them (Alkali metals: Li-Cs.), 14:36787 (RA;SU;In Russian)

CESIUM OXIDES
Thermogravimetric study of formation process and properties of cesium tantalum oxides, 14:36772 (RA;SU;In Russian)

CESIUM PHOSPHATES
Determination of specific heats of double magnesium and alkali metal orthophosphates (Alkali metals: Li-Cs.), 14:36753 (RA;SU;In Russian)
Infrared absorption spectra of rare alkali metal phosphates (Alkali metals: Li, Rb, Cs.), 14:36752 (RA;SU;In Russian)
Investigation into deep purification processes of potassium, rubidium and cesium dihydrophosphates, 14:36811 (RA;SU;In Russian)
Lithium, rubidium, and cesium cyclohexaphosphates, 14:36750 (RA;SU;In Russian)
On the compounds of rubidium, cesium and lanthanum polyphosphates, 14:36748 (RA;SU;In Russian)
On the interaction of lithium and cesium phosphates of metaphosphate composition with bismuth metaphosphate, 14:36755 (RA;SU;In Russian)

On the kinetics of dehydration of double orthophosphate hexahydrates $MgMPO_4$, 14:36749 (RA;SU;In Russian)
Properties of mixed polyphosphates of silver and rare alkali metals (Alkali metals: Li, Rb, Cs.), 14:36754 (RA;SU;In Russian)
Thermodynamic and crystallochemical features of thermal dehydration process of rubidium and cesium dihydroorthophosphates, 14:36757 (RA;SU;In Russian)

CESIUM SULFATES
Interaction of cesium, nickel and praseodymium (3) sulfates in aqueous solutions, 14:36780 (RA;SU;In Russian)

CESIUM TUNGSTATES
Synthesis and properties of double tungstates of rubidium, cesium, and titanium, 14:36765 (RA;SU;In Russian)

CHIMNEYS
The influence of termination configuration on the flow performance of flues, 14:37024 (R;CA)

CHINA
Comparative economic analysis of heavy oil recovery projects in China and Canada, 14:35645 (RA;CA)
Paleomagnetic study of Shanwang formation, Shandong Province, China, 14:37409 (R;XA)
Proceedings of the Chinese-American symposium on energy markets and the future of energy demand, 14:36258 (R;US)
The thick-getting mechanism and characteristics of terrestrial heavy oil pools in China, 14:35599 (RA;CA)

CHLOR-ALKALI INDUSTRY
See CHEMICAL INDUSTRY
CHLORINE

CHLORIDES
See also CADMIUM CHLORIDES
CESIUM CHLORIDES
LITHIUM CHLORIDES
SODIUM CHLORIDES
STRONTIUM CHLORIDES
Evolution of the chemistry of passive films of sputter-deposited, supersaturated Al alloys. Annual report, 1 July 1987-30 November 1988, 14:36461 (R;US)

CHLORINATED AROMATIC HYDROCARBONS
Evaluating CFC [chlorofluorocarbon] alternatives from the atmospheric viewpoint: Revision 1, 14:37196 (R;US)

CHLORINE
Effects of trace gases on global atmospheric chemical and physical processes, 14:37195 (R;US)

CHLORINE 36
Complexing and catalysis in reactions of chlorine isotopic exchange between aluminium chlorides and alkylchlorides in nonaqueous solvating solvents medium, 14:36817 (RA;SU;In Russian)

CHLORINE CHLORIDES
See CHLORINE

CHLOROFORM
Macromolecular coal structure as revealed by novel diffusion tests: Quarterly technical report, January 15, 1989–April 15, 1989, 14:35553 (R;US)

CHROMATID DELETIONS
See CHROMOSOMAL ABERRATIONS

CHROMATOGRAPHIC COLUMNS
See EXTRACTION COLUMNS

CHROMATOGRAPHY
See also GAS CHROMATOGRAPHY
ION EXCHANGE CHROMATOGRAPHY
LIQUID COLUMN CHROMATOGRAPHY
SUPERCRITICAL FLUID CHROMATOGRAPHY
Numerical simulation of band profiles for two-component separations by displacement chromatography, 14:36732 (BA;US)

CHROMIUM
Chemistry and microstructure at metal-polymer interfaces, 14:36668 (BA;FR)
Cross-sectional TEM [transmission electron microscopy] studies of Cr films deposited by ion-assisted deposition and physical vapor deposition, 14:36472 (R;US)
Effect of chromium on early stages of oxidation of Ni_3Al alloys at 600°C, 14:36608 (J;US)
Interdiffusion of Au/Ni/Cr on silicon substrate, 14:36529 (BA;FR)
Trace metal removal by iron coprecipitation: Field evaluation: Final report, 14:35960 (R;US)

CHROMIUM 52 TARGET
Analysis of threshold reaction cross-sections and spectra of particles emitted in them on iron-group nuclei, 14:37618 (RA;XA)

CHROMIUM ALLOYS
See also CHROMIUM STEELS
NICKEL-CHROMIUM STEELS
An Auger sputter profiling study of nitrogen and oxygen ion implantation in two titanium alloys, 14:37688 (R;US)
Breakdown mechanisms of Al_2O_3, Cr_2O_3 and SiO_2 scales in $H_2/H_2O/H_2S$ environments: Final report, Volume 1, 14:35538 (R;US)
Development of an engineering definition of the extent of J singularity controlled crack growth, 14:36579 (R;US)
Effect of Y_2O_3 additions on the plasticity of sintered Cr_2O_3, 14:36607 (J;US)
Grain boundary internal friction and relationship to intergranular fracture, 14:36521 (BA;FR)
Influence of the crystallography on the incorporation of lattice dislocations in grain boundaries, 14:36507 (BA;FR)
Studies on work-softening processes in the hot forming of austenitic steel, 14:36581 (TJ;US)
Sulfidation/oxidation properties of iron-based alloys containing niobium and aluminum, 14:35539 (R;US)
The nature and composition of the passive film formed on Ni-P-Cr metallic glasses, 14:36366 (BA;US)
[2nd international symposium on high-temperature corrosion of advanced materials and coatings, Les Embiez, France, and visit to Manchester, England, May 19–27, 1989]: Foreign trip report, 14:35536 (R;US)

CHROMIUM COMPLEXES
Study of intermediates from transition metal excited-state electron-transfer reactions: Progress report, August 1, 1986–December 31, 1988, 14:36741 (R;US)

CHROMIUM OXIDES
Breakdown mechanisms of Al_2O_3, Cr_2O_3 and SiO_2 scales in $H_2/H_2O/H_2S$ environments: Final report, Volume 1, 14:35538 (R;US)
Effect of Y_2O_3 additions on the plasticity of sintered Cr_2O_3, 14:36607 (J;US)

CHROMIUM STEELS
On the properties of new corrosion-resistant high-strength steel 06Kh17G19N3AB and it welded joints, 14:36567 (RA;SU;In Russian)

CHROMODYNAMICS
See QUANTUM CHROMODYNAMICS

CHROMOSOMAL ABERRATIONS
Peculiarities of cytogenetic efficiency of irradiation of patients in case of various types of mammography, 14:37657 (RA;SU;In Russian)

CHROMOSOME ABERRATIONS
See CHROMOSOMAL ABERRATIONS

CHROMOSOME EXCHANGES

CLATHRATES
Staging in layer intercalates: Progress report, 1 June 1988–31 May 1989, 14:36667 (R;US)

CLAYS
Containment of organic leachates from leaking underground storage tanks using tailored soils as liners, 14:37216 (R;US)
Development of heat storage systems with vertical pipes in earth and rock, 14:36207 (RA;CA;In English and French)
Sorption of radionuclides on London clay, 14:37224 (R;GB)

CLIMATES
Backgrounder contribution No. 18: Climate scenarios for the first UC/DOE workshop, 14:37161 (R;US)

CLINTON P. ANDERSON MESON PHYSICS FACILITY
See LAMPF LINAC

CLIPPING CIRCUITS
See PULSE SHAPERS

CLOUDS
Trajectory analysis of nine years of precipitation chemistry in Charlottesville, Virginia: Final report, 14:37165 (R;US)

CO-GENERATION
See COGENERATION

CO2 FLOODING
See CARBON DIOXIDE INJECTION

COAL
See also SUBBITUMINOUS COAL

Alkylation
Solubilization of coal by reductive and non-reductive alkylation in liquid ammonia, 14:35547 (RA;CA)

Catalytic Hydrosolvation Process
Investigation in the use of heavy oils (and derivatives) to process coal, 14:35518 (RA;CA)

Chemical Properties
Correlation of stability/rheology relationship with coal properties and chemical additives: Quarterly progress report, September 15, 1988–December 15, 1988, 14:35554 (R;US)

Combustion
Coal combustion science: Quarterly progress report, January–March 1989, 14:35592 (R;US)
Detoxification and generation of useful products from coal combustion wastes: Quarterly technical report, [October–December 1988], 14:35585 (R;US)
Pyrite thermochemistry, ash agglomeration, and char fragmentation during pulverized coal combustion: Quarterly report, December 15, 1988–March 15, 1989, 14:35583 (R;US)

Combustion Chambers
Development of a vortex-containment combustor for coal-combustion systems. Report for January 1980-December 1983 (Final), 14:35591 (R;US)

Combustion Products
Cost impact of potential RCRA (Resource Conservation Recovery Act) changes on New York State Utility coal-waste disposal. Final report, 14:35563 (R;US)
Utilization potential of coal-combustion by-products: Somerset Power Plant case study. Final report, 14:36418 (R;US)

Combustion Properties
Final report on the comparative combustion properties of raw and washed Prince Mine coal, 14:35588 (R;CA)

Comminution
Coal disintegration by high-pressure waterjet: Final report, 14:35514 (R;US)

Coprocessing
A fundamental research program in coal/heavy oil coprocessing and heavy oil processing: Final report, 14:35523 (R;US)
Coal/oil coprocessing mechanism studies, 14:35546 (J;US)
Exploratory coprocessing research: Quarterly report number 2, for the period December 1, 1988 to February 28, 1989, 14:35527 (R;US)
Improved performance in co-processing through fundamental and mechanistic studies in hydrogen transfer and catalysis: Quarterly report, December 27, 1988–March 27, 1989, 14:35526 (R;US)
Low severity co-processing using homogeneous basic nitrogen promotors, 14:35641 (J;US)

Desulfurization
The selective oxidation desulfurization process: bench-scale studies: Final report, 14:35532 (R;US)
Dusts
Coal dustiness: characterization and control, 14:35549 (R;CA)
Environmental Impacts
Clean Coal Technology Demonstration Program: Draft Programmatic Environmental Impact Statement, 14:35565 (R;US)
Flotation
Testing of pyrite flotation techniques on selected Ohio coals: Final report, 14:35512 (R;US)
[Advanced froth flotation techniques]: Quarterly technical progress report No. 1, September 1, 1988–November 30, 1988, 14:35511 (R;US)
Maritime Transport
Coal traffic on the Tennessee River Waterway to year 2000, 14:35579 (R;US)
Ph Value
A preliminary pH analysis of coal slurries from the Sydney Coalfield, N.S., 14:35570 (R;CA)
Porosity
Role of porosity in supercritical fluid extraction of coal: Technical progress report, 14:35559 (R;US)
Processing
Investigation in the use of heavy oils (and derivatives) to process coal, 14:35518 (RA;CA)
Solubility
Solubilization of coal by reductive and non-reductive alkylation in liquid ammonia, 14:35547 (RA;CA)
Supply and Demand
Canadian energy supply and demand, 1987-2005, 14:36260 (R;CA;In French)
Canadian energy supply and demand, 1987-2005, 14:36259 (R;CA)
Surface Properties
Fundamental research on surface science of coal in support of physical beneficiation of coal: Quarterly technical progress report, January 1–March 31, 1989, 14:35551 (R;US)
Swelling
Macromolecular coal structure as revealed by novel diffusion tests: Quarterly technical report, January 15, 1989–April 15, 1989, 14:35553 (R;US)
Transport
Studies of dense phase cohesive coal transport in plugs: Quarterly report, April–June 1989, 14:35578 (R;US)
Trommels
Report on the combustion of screened duff coal in a chain-grate stoker-fired boiler, 14:35590 (R;ZA)
Wettability
Surface properties of coal and their role in coal beneficiation: Technical progress report, March 15, 1989–June 14, 1989, 14:35557 (R;US)

COAL EXTRACTS
Spectroscopic study of coal structure and reactivity: Quarterly report, January 1, 1989 to March 31, 1989, 14:35552 (R;US)

COAL FINES
Oil phase in selective agglomeration: a structural approach, 14:35515 (R;ZA)

COAL GASIFICATION
See also MOLTEN IRON PUREGAS PROCESS
Clean Coal Technology Demonstration Program: Draft Programmatic Environmental Impact Statement, 14:35565 (R;US)
Coal-test program in a pressurized, fluidized-bed ash-agglomerating process development unit. Volume 2. Data analysis. Final report, November 15, 1984-August 31, 1987, 14:35544 (R;US)
Engineering support services for the DOE/GRI coal gasification research program: Technical progress report for the period June 25–September 30, 1988, 14:35524 (R;US)

COAL GASIFICATION PLANTS
Cool Water Coal Gasification Program: Monitoring Review Committee meeting report, Washington, D.C., July 12, 1988, 14:35540 (R;US)

COAL INDUSTRY
Energy privatisation, 14:36271 (R;GB)
Why British coal should be privatised, 14:36272 (RA;GB)

COAL LIQUEFACTION
See also SASOL PROCESS
Clean Coal Technology Demonstration Program: Draft Programmatic Environmental Impact Statement, 14:35565 (R;US)
Deactivation of hydrotreatment catalysts used for coal liquids: Semi-annual report, 12 May 1988–11 November 1988, 14:35525 (R;US)
Factors controlling hydrogenolysis in coal liquefaction: Quarterly report No. 6 for the period October 1–December 31, 1987, 14:35531 (R;US)
Low severity co-processing using homogeneous basic nitrogen promotors, 14:35641 (J;US)
Phase equilibrium data for development of correlations for coal fluids: Report for the period April 15, 1989–June 15, 1989, 14:35530 (R;US)
The chemical origin of synergy in liquefaction and co-processing, 14:35521 (R;US)

COAL LIQUEFACTION PLANTS
Quick-response evaluation of energy-related occupational safety and health programs. Task Order 1: mortality study of 50 workers exposed to coal-liquefaction processes at a Union Carbide Plant, Institute, West Virginia, 14:35541 (R;US)

COAL LIQUIDS
Continuous thermodynamics and group contribution methods for coal liquids: Final report, October 1, 1986–October 1, 1989, 14:35558 (R;US)

COAL MINES
Acidification of infiltration waters as a result of the seepage through carboniferous host-rocks, 14:35566 (RA;NO)
Feasibility study of utilization of coal-mine refuse; Estill County, Kentucky, 14:35562 (R;US)
High-performance, intrinsically safe data-acquisition system for underground use. Final report, October 1984-December 1984, 14:35575 (R;US)
Radon concentrations in air of Polish underground coal mines, 14:35597 (RA;CA)
Roofbolt support in board and pillar workings, 14:35576 (R;ZA)

COAL MINING
CANMET review 1986-1987, 14:36239 (R;CA;In English and French)

COAL PREPARATION
Canadian coal preparation process-control research and development directions, 14:35516 (R;CA)

COAL SEAMS
Measurement of static coalbed-reservoir conditions for hydraulic-fracture design. Volume 2. Final report, March 1983-December 1986, 14:35681 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED GAS TURBINES
Secondary atomization of coal-water fuels for gas turbine applications: Final report, 14:35581 (R;US)

COAL-FIRED MHD GENERATORS

COPPER
Atmospheric corrosion and inhibition of copper, 14:36595 (BA;US)
Bismuth segregation in Cu-Bi bicrystals, 14:36510 (BA;FR)
Chemistry and microstructure at metal-polymer interfaces, 14:36668 (BA;FR)
Cu-AlN interface: electronic structure and adhesion, 14:36542 (BA;FR)
Dependence of diffusion-induced grain boundary migration on grain boundary structure, 14:36527 (BA;FR)
Free energy calculation via MD: methodology and application to bicrystals, 14:36499 (BA;FR)
High resolution electron energy loss studies of surface vibrations: Progress report, July 1, 1988–June 20, 1989, 14:36481 (R;US)
Normal state resistance and low temperature magnetoresistance of superconducting cables for accelerator magnets, 14:36946 (J;US)
Polycrystal plasticity as applied to the problem of in-plane anisotropy in rolled cubic metals, 14:36572 (R;US)
Resonant charge-exchange studies with hyperthermal-energy ion beams: development of multi-detection capabilities and a data acquisition system. Final report, 15 November 1986-14 May 1988, 14:37460 (R;US)
Separation potential of solvent extraction in the recovery of metals, 14:35762 (BA;US)
Special mechanical properties of very thin films, 14:36538 (BA;FR)
Structure of small angle tilt boundaries and their behavior under the applied shear stresses in fcc metals, 14:36531 (BA;FR)
Survey of results from Brookhaven Experiment 802 at the AGS, 14:37596 (R;US)
TEM study of diffusion-induced grain boundary migration in Ni-Cu diffusion couples, 14:36530 (BA;FR)
Trace metal removal by iron coprecipitation: Field evaluation: Final report, 14:35960 (R;US)

COPPER 63
Anomalous temperature dependence of Cu NMR line width and magnetization in $YBa_2Cu_3O_{7-\delta}$, 14:36642 (R;US)

COPPER ADDITIONS
Corrosion of high-density sintered tungsten alloys. Part 1. Immersion testing, 14:36463 (R;AU)
Corrosion of high-density sintered tungsten alloys. Part 2. Accelerated corrosion testing, 14:36464 (R;AU)

COPPER ALLOYS
See also COPPER ADDITIONS
COPPER BASE ALLOYS
MONEL 400
Development of an engineering definition of the extent of J singularity controlled crack growth, 14:36579 (R;US)
Effect of grain-boundary structure on stress corrosion cracking in αCu-Al alloy bicrystals, 14:36536 (BA;FR)
Preparation of in situ Cu-Nb composite sheet and wire for TEM analysis, 14:36599 (BA;US)
TEM determination of incoherent twin-boundary structure in $L1_2$ ordered alloys, 14:36497 (BA;FR)

COPPER BASE ALLOYS
See also BRASS
A database for reviews and evaluations of high-level waste documents, 14:35820 (BA;US)

COPPER COMPOUNDS
See also COPPER OXIDES
CUPRATES
Consolidation of powders of the oxide superconductor YBa_2Cu_3Ox by high energy-high rate processing, 14:36611 (R;US)
High-temperature superconductivity. Quarterly report No. 1 for period ending FY89, 14:36613 (R;US)
Impedance spectroscopy for the study of anodic copper dissolution in sulfuric acid in presence of benzotriazole, 14:36367 (BA;US)
Josephson effect research in high-temperature superconductors. Interim report, 30 September 1987-29 September 1988, 14:36609 (R;US)

COPPER OXIDES
Absorption Spectra
X-ray absorption spectroscopy investigations of high Tc superconductors, 14:36649 (BA;US)
Annealing
Annealing and strain effects on Tl-Ba-Ca-Cu-O crystals and ceramics, 14:36647 (R;US)
Critical Current
Anisotropies in the magnetic penetration depth and critical current density of $R_1Ba_2Cu_3O_{7-x}$ (R = Y or Ho), measured on magnetically-aligned powder composites, 14:36952 (J;US)
Electrochemistry
Phase relations in quaternary copper oxide electrodes, 14:36652 (BA;US)
Interfaces
High resolution electron microscopy of interfaces in functional materials, 14:36623 (BA;FR)
Magnetic Shielding
Diamagnetic shielding and flux creep in a Tl-Ba-Ca-Cu-O thin film, 14:36584 (R;US)
Microstructure
Flux noise and flux creep in YBCO thin films, 14:36897 (J;US)
Nuclear Magnetic Resonance
^{17}O NMR study of $YBa_2Cu_3O_{7-\delta}$, 14:36641 (R;US)
Anomalous temperature dependence of Cu NMR line width and magnetization in $YBa_2Cu_3O_{7-\delta}$, 14:36642 (R;US)
Nuclear relaxation rates at copper and oxygen sites in $YBa_2Cu_3O_7$, 14:36640 (R;US)
Pairing Energy
Pairing in CuO_2 driven by exchange interactions between carriers and localized Cu spins, 14:37476 (R;US)
Phase Studies
Grain size control in powder processed $Y_1Ba_2Cu_3O_x$, 14:36947 (J;US)
Superconducting Films
Characterization of YBaCuO and ErBaCuO thin films deposited on silicon and gallium arsenide substrates, 14:36899 (J;US)
In situ growth of superconducting YBaCuO using reactive electron-beam coevaporation, 14:36955 (J;US)
Low frequency resistance fluctuations in films of high temperature superconductors, 14:36900 (J;US)
RF electromagnetic investigation of an $YBa_2Cu_3O_7$ thin film by proximity coupling, 14:36902 (J;US)
Superconducting Junctions
Low contact-resistivity junctions to ceramic superconductors, 14:36945 (J;US)
Superconductivity
A film transmission line resonator to measure the microwave surface resistance of $YBa_2Cu_3O_{7-x}$, 14:36901 (J;US)
A simple method for preparing superconducting high Tc thin films, 14:36956 (J;US)
Thermal Conductivity
Thermal conductivity anisotropy in single crystal $YBa_2Cu_3O_{7-x}$, 14:36616 (R;US)

COPPER SELENIDE SOLAR CELLS
Materials analysis and device optimization of $CuInSe_2$ solar cells: Annual subcontract report, 16 January 1987–15 January 1988, 14:35913 (R;US)
Two-terminal $CuInSe_2$-based cascade cells: Annual subcontract report, 16 January 1987–15 January 1988, 14:35911 (R;US)

COPPER VAPOR LASERS
See GAS LASERS

COPROCESSING
A fundamental research program in coal/heavy oil coprocessing and heavy oil processing: Final report, 14:35523 (R;US)
Bibliography of CANMET publications on coprocessing, 14:35533 (R;CA)
Coal/oil coprocessing mechanism studies, 14:35546 (J;US)
Improved performance in co-processing through fundamental and mechanistic studies in hydrogen transfer and catalysis: Quarterly report, December 27, 1988–March 27, 1989, 14:35526 (R;US)
The chemical origin of synergy in liquefaction and coprocessing, 14:35521 (R;US)

CORES (REACTOR)

DIBARYONS
Molecular picture for dibaryons, 14:37523 (RA;RO;In Romanian)
New results on narrow dibaryns produced in np-ppPI$^-$ at 1.25 Gev/c, 14:37520 (RA;RO;In Romanian)
DIBUTYL PHOSPHATE
See DBP
DICHLOROMETHANE
See METHYLENE CHLORIDE
DIELECTRIC TRACK DETECTORS
Equipment and methodical complex for measuring integral volumetrical activity of radon and its fission products, 14:37659 (RA;SU;In Russian)
DIESEL ENGINES
Effect of a diesel blend containing heavy naphtha on the performance and durability of an ADE 236 diesel engine operating with standard-injection timing, 14:36446 (R;ZA)
Effect of a light-diesel blend formulated by BP on the performance and durability of an ADE 314 diesel engine, 14:36445 (R;ZA)
Engine operation on extended diesel fuels, 14:36444 (R;ZA)
Laboratory evaluation of MIL-T-83133 JP-8 fuel in army diesel engines. Interim report, October 1984-January 1988, 14:35666 (R;US)
NMERI (National Mechanical Engineering Research Institute) experience with alcohol fuels for diesel engines, 14:36451 (R;ZA)
Software development for a microprocessor based controller for ac-dc-ac diesel-electric freight locomotive power unit control, 14:36443 (R;CA)
Waste heat recovery in remote communities. A shared opportunity, 14:35953 (R;CA)
DIESEL FUELS
Effect of a diesel blend containing heavy naphtha on the performance and durability of an ADE 236 diesel engine operating with standard-injection timing, 14:36446 (R;ZA)
Effect of a light-diesel blend formulated by BP on the performance and durability of an ADE 314 diesel engine, 14:36445 (R;ZA)
Engine operation on extended diesel fuels, 14:36444 (R;ZA)
NMERI (National Mechanical Engineering Research Institute) experience with alcohol fuels for diesel engines, 14:36451 (R;ZA)
DIESEL OIL (FRACTION)
See DIESEL FUELS
DIFFERENTIAL EQUATIONS
Asynchronous integration of ordinary differential equations on multiprocessors, 14:37802 (R;US)
DIFFRACTION (X-RAY)
See X-RAY DIFFRACTION
DIFFUSION
Configurational diffusion of coal macromolecules: Quarterly progress report, March 16–June 15, 1989, 14:35556 (R;US)
DIGESTER GAS
See METHANE
1,2-DIHYDROXYBENZENE

DIMETHYL KETONE
See ACETONE
DIMETHYLBENZENES
See XYLENES
DIODE TRANSISTORS
See TRANSISTORS
DIODES (SEMICONDUCTOR)
See SEMICONDUCTOR DIODES
DIPHENYLPHOSPHINE OXIDE
See ORGANIC PHOSPHORUS COMPOUNDS
DIRAC EQUATION
Klein's paradox and the relativistic point interaction, 14:37710 (R;DE)
DIRECTIONAL CORRELATION
See ANGULAR CORRELATION
DIRECTIONAL DRILLING
Calculating the maximum horizontal wellbore length, 14:35700 (RA;CA)
Horizontal well application in the Pelican Lake and winter reservoirs, 14:35631 (RA;CA)
DISCHARGES (IONIZATION)
See IONIZATION
DISCHARGES (WASTES)
See WASTE DISPOSAL
DISINTEGRATION (FISSION)
See FISSION

DISLOCATIONS
See also SCREW DISLOCATIONS
Dynamic studies of deformation and fracture at grain boundaries, 14:36533 (BA;FR)
Mobility of dislocations in grain boundaries, 14:37673 (BA;FR)
Molecular statics studies of grain boundaries: structure and energy of (001) twist boundaries, 14:37665 (BA;FR)
DISPOSAL (WASTES)
See WASTE DISPOSAL
DISSOLVED OXYGEN
See OXYGEN
DISTILLATES
Structural definition of synthetic fuels, Wilsonville I, 14:35560 (R;US)
DISTRICT HEATING
See also SOLAR DISTRICT HEATING
Open cycle heat pump development: Phase II, District heating case study analysis: Progress report, October 1988–December 31, 1988, 14:36424 (R;US)
Seasonal storage of heat for district heating in Sweden, 14:36206 (RA;CA;In English and French)
The borehole heat store at Lulea, Sweden, 14:36213 (RA;CA;In English and French)
DISTRICT OF COLUMBIA
See WASHINGTON DC
DNA
See also RECOMBINANT DNA
A soliton mechanism for DNA melting: Progress report, November 1, 1988–October 31, 1989, 14:37298 (R;US)
DNA biosynthesis content and intensiveness in mice thymus at early periods following fast neutron irradiation with different energy rate, 14:37379 (RA;SU;In Russian)
Functional potential of the human LINE-1 family of interspersed repeats, 14:37288 (RA;US)
Inducible cellular responses to DNA damage, 14:37387 (RA;US)
Possible role of retrotransposons in carcinogenesis, 14:37389 (RA;US)
Role of the bacterial host in the mechanism and regulation of Tn10 transposition, 14:37304 (RA;US)
DNA POLYMERASES
Structural studies of Klenow fragment: an enzyme with two active sites, 14:37297 (BA;US)
DNA REPAIR
DNA exchange in mice spleen at early periods following fast neutron irradiation with different energy rate, 14:37378 (RA;SU;In Russian)
Inducible cellular responses to DNA damage, 14:37387 (RA;US)
Intensity of DNA synthesis in immuno-competent organs of animals in early periods after neutron irradiation with different energy values, 14:37377 (R;SU;In Russian)
DOMESTIC SUPPLIES
Oil use and oil dependency: Long-term issues, 14:35654 (R;US)
DOMESTIC WASTES
See MUNICIPAL WASTES
DOPING (CRYSTAL)
See CRYSTAL DOPING
DORMITORIES
See RESIDENTIAL BUILDINGS
DOSE DISTRIBUTIONS
See RADIATION DOSE DISTRIBUTIONS
DOSE EQUIVALENTS
324 and 325 Building Hot Cell Cleanout Program: Air lock cover block refurbishment, 14:35803 (R;US)
Annual radiological environmental operating report, Sequoyah Nuclear Plant, 1988, 14:37230 (R;US)
Systems analysis, long-term radionuclide transport, and dose assessments, Waste Isolation Pilot Plant (WIPP), southeastern New Mexico; March 1989, 14:35811 (R;US)
DOSE RATES
Risk assessment and late effects of radiation in low-earth orbits, 14:37343 (R;US)
DOSEMETERS
See also BIOLOGICAL DOSEMETERS
Calibration and testing of the DMG gamma dosimeter, 14:37111 (RA;SU;In Russian)
High-dose intercomparison study involving red 4034 perspex and radiochromic dye films, 14:37100 (R;GB)
DOSIMETERS
See DOSEMETERS
DOUBLE BETA DECAY
Research in nuclear physics at low and intermediate energies, neutrinos and x rays: Final report, May 1980–August 1987, 14:37563 (R;US)
DOW PUSHER 700
See POLYAMIDES
DOWTHERM
See BIPHENYL
DPO
See ORGANIC PHOSPHORUS COMPOUNDS
DRAFT CONTROL SYSTEMS
The influence of termination configuration on the flow performance of flues, 14:37024 (R;CA)
DRAG
Proposals for improving interphase drag modelling for the bubbly and slug regimes in RELAP5, 14:36001 (R;GB)
DRAG COEFFICIENT
See DRAG
DRAG EFFECT
See ELECTROPHORESIS
DRIFT (PLASMA)
See PLASMA DRIFT
DRILL BITS
PDC [polycrystalline diamond compact] bit research at Sandia National Laboratories, 14:35943 (R;US)
DRILL HOLES
See BOREHOLES
DRILL PIPES
Calculating the maximum horizontal wellbore length, 14:35700 (RA;CA)
In search of more output: Two strain gage bridge circuits revisited, 14:37135 (R;US)
DRILLING FLUIDS
Handling and disposal of waste drilling fluids from on-land sumps in the Northwest Territories and Yukon, 14:35660 (R;CA)
DRILLING MUD
See DRILLING FLUIDS
DROSOPHILA
Concerted transposition in Drosophila melanogaster, 14:37307 (RA;US)
Evidence of host-mediated regulation of retroviral element expression at the posttranscriptional level, 14:37312 (RA;US)
Mobile DNA elements and spontaneous gene mutation, 14:37305 (RA;US)
Molecular basis of transposable element-induced mutations in Drosophila melanogaster, 14:37308 (RA;US)
Regulatory aspects of the expression of P-M hybrid dysgenesis in Drosophila, 14:37294 (RA;US)
Retrovirus-like particles, reoviruses, and c-src expression in malignant tumors of Drosophila melanogaster, 14:37296 (RA;US)
Structure of mutations induced by I-R hybrid dysgenesis in Drosophila melanogaster, 14:37311 (RA;US)
Transposons as probes of regulatory machinery, 14:37291 (RA;US)
DRUG ABUSE
Fitness for duty in the nuclear power industry: A review of technical issues, 14:36162 (R;US)
Fitness for duty in the nuclear power industry: Responses to public comments, 14:36052 (R;US)
DRYERS
Testing of hair dryers for asbestos emissions, 14:37180 (R;US)
DTO
See TRITIUM COMPOUNDS
DUAL-PURPOSE POWER PLANTS
Decentral dual-purpose power plants, 14:36344 (R;DK;In Danish)
DUANE ARNOLD-1 REACTOR
Personnel development program (an enhancement to GET), 14:36138 (RA;US)

DUSTS
See also COSMIC DUST
Characterization of radioactive long-lived dust present in uranium mines and mills atmospheres, 14:35750 (RA;CA)
Coal dustiness: characterization and control, 14:35549 (R;CA)
Further studies of respiratory health of wool textile workers. Final report, October 1986-July 1988, 14:37191 (R;GB)
Hazards of explosives dusts, 14:37150 (R;US)
Preliminary survey report: control technology support for sensor, Unimin Corporation, Dividing Creek Sand Plant, Millville, New Jersey, August 16, 1988, 14:37179 (R;US)
Recreating the uranium mining environment of the 1950's, 14:35751 (RA;CA)
Release of dispersed asbestos fibres from soils, 14:37190 (R;GB)
DYE LASERS
Laser action from syn-(methyl,methyl) bimane, 14:36958 (R;US)
Sideband generation in saturated pulsed dye amplifiers with multiple cw single mode injection, 14:36969 (BA;US)
DYMAC SYSTEM
See NUCLEAR MATERIALS MANAGEMENT
PLUTONIUM
DYNAMIC MATERIALS ACCOUNTABILITY SYSTEM

ELECTRON BEAM FUSION ACCELERATOR
CEBAF, a large scale application of superconducting rf, 14:36896 (J;US)

ELECTRON BEAM INJECTION
Application of cyclotron instability for excitation of RF fields in linear accelerators, 14:37059 (RA;SU;In Russian)

ELECTRON BEAM WELDING
Introduction of experience of television information-control systems in welding, 14:36569 (RA;SU;In Russian)

ELECTRON BEAMS
Effect of high-frequency energy recuperation on the intense electron beam acceleration dynamics, 14:37055 (RA;SU;In Russian)
Modeling of the proposed ATA fast correction coils, 14:37046 (R;US)
On the acceleration of relativistic electron beam over dielectrical grid, 14:37061 (RA;SU;In Russian)
Optimization of particle dynamics in accelerating installation with account of the excitation of resonator by a beam, 14:37060 (RA;SU;In Russian)

ELECTRON DENSITY
Electron-density profiles and plasma-drift measurements with digital ionosondes. Technical report, July 1987-June 1988, 14:37452 (R;US)

ELECTRON DONOR
See ELECTRONS

ELECTRON GUNS
Electron injector for high-voltage model of collective accelerator, 14:37078 (RA;SU;In Russian)
ELECTRON NEUTRINOS
Neutrino mass experiments, 14:37511 (R;US)
ELECTRON SPECTROMETERS
CEBAF superconducting spectrometer design, 14:36934 (J;US)
ELECTRON TRANSFER
Superexchange coupling mechanisms for electron transfer processes, 14:36735 (R;US)
ELECTRON-POSITRON INTERACTIONS
Search for resonant Bhabha scattering at MeV energies, 14:37507 (R;DE)
ELECTRON-RING ACCELERATORS
A superconducting dipole concept for the CEBAF high resolution spectrometers, 14:36943 (J;US)
A superconducting toroidal magnet for the CEBAF large acceptance spectrometer, 14:36942 (J;US)
CEBAF superconducting spectrometer design, 14:36934 (J;US)
ELECTRONIC CIRCUITS
See also PRINTED CIRCUITS
A symbolic generator of state equations for modeling of dynamic systems based on the electrical network analog paradigm, 14:37014 (R;US)
Developing software to use parallel processing effectively. Final report, June-December 1987, 14:37797 (R;US)
LineCAP [Line/Circuit Analysis Program]: Cross-coupling on PC [printed circuit] board traces including discontinuities and circuit elements, 14:37015 (R;US)
Transition metal oxide electrochemical capacitors, 14:37021 (BA;US)
ELECTRONIC DATA PROCESSING
See DATA PROCESSING
ELECTRONIC EQUIPMENT
See also MICROWAVE EQUIPMENT
POWER SUPPLIES
A probabilistic method for estimating system susceptibility to HPM, 14:37131 (R;US)
ELECTRONS
An overview of atomic and molecular processes in critical velocity ionization, 14:37750 (J;US)
Electron localization in one-dimensional incommensurate potentials, 14:37694 (BA;US)
Physics of spin-polarized atomic vapors. Final report, 1 October 1986-30 April 1988, 14:37461 (R;US)
ELECTROPHORESIS
Optimization of separation efficiency in capillary zone electrophoresis, 14:36731 (BA;US)
The on-line combination of capillary isotachophoresis with mass spectrometry, 14:37142 (R;US)
ELECTROSTATIC ACCELERATORS
See also VAN DE GRAAFF ACCELERATORS
Generator of a high-power microsecond REB, 14:37721 (RA;SU;In Russian)
Numerical simulation of plasma-filled diode gap with magnetic insulation, 14:37057 (RA;SU;In Russian)
Safety guide of the Tandar accelerator, 14:37640 (R;AR;In Spanish)
ELECTROSTATIC LENSES
Gabor lens focusing of a negative ion beam, 14:37051 (R;US)
ELECTROSTATIC PRECIPITATORS
10-MW spray dryer/ESP pilot plant test program: High-sulfur coal test phase (phase 3): Final report, 14:35962 (R;US)
Electrostatic precipitators. January 1979-April 1989 (Citations from the NTIS data base). Report for January 1979-April 1989, 14:37193 (R;US)
ELECTROSTATIC WAVES
See PLASMA WAVES
ELEMENTS
See also METALS
TRANSURANIUM ELEMENTS
Size distribution patterns for trace elements in waters draining a small catchment, S.E. Norway, 14:37263 (RA;NO)
ELLIOT LAKE
Recreating the uranium mining environment of the 1950's, 14:35751 (RA;CA)
ELLIPSOMETRY
ELLIPSE user's manual and program reference, 14:37811 (R;US)
EMBRYOS
Genetics of early embryo survival, 14:37314 (R;US)
EMERGENCY PLANS
1988 DOE model conference proceedings: Volume 2, 14:35772 (R;US)
Chemical and nuclear emergencies: Interchanging lessons learned from planning and accident experience, 14:37344 (R;US)
Crisis management program for senior officials, 14:35830 (RA;US)
EMERGENCY PROVISIONS
See EMERGENCY PLANS
EMITTANCE (BEAM)
See BEAM EMITTANCE
EMPLOYEES

EMULSIONS
"Slip effects" in concentrated emulsions, 14:37132 (R;CA)
ENDANGERED SPECIES
Preliminary assessment of habitat protection needs for West Indian manatees on the east coast of Florida and Georgia. Final report, 14:37284 (R;US)
The occurrence and status of candidate species listed by the US Fish and Wildlife Service on Naval Petroleum Reserve No. 1, Kern County, California, 14:37207 (R;US)
ENDONUCLEASES
Regulatory aspects of the expression of P-M hybrid dysgenesis in Drosophila, 14:37294 (RA;US)
ENDOSTEUM
See BONE TISSUES
ENERGY ABSORPTION
Radial distributions of energy deposited along charged particle tracks, 14:37663 (R;US)
ENERGY ANALYSIS
Performance monitoring protocols, 14:36393 (R;US)
ENERGY CONSERVATION
Conservation and Renewable Energy Program bibliography, 1989 Edition, 14:36370 (R;US)
Energy Task Force status report for first quarter year ten, 14:36253 (R;US)
Technology selection criteria and methodology for prioritizing energy research and development programs. Final report, 14:36252 (R;US)
User's guide to CONVEST, 14:37803 (R;US)
ENERGY CONSUMPTION
Retention and expansion program for high-energy use and cost-intensive business, 14:36429 (R;US)
ENERGY CONVERSION
Review of second law analysis techniques applicable to the Energy Conversion and Utilization Technologies Thermal Sciences Program, 14:36226 (R;US)
ENERGY DEMAND
DRI (Data Resources Inc.) Energy Model/GRI (Gas Research Institute) Hydrocarbon Model and IFCAM linkage. Final report, December 1984, 14:36268 (R;US)
DRI (Data Resources Inc.) Energy Model/GRI (Gas Research Institute) Hydrocarbon Model and IFCAM linkage. Final report, September 1983, 14:36265 (R;US)
GRI (Gas Research Institute) 1983 baseline project forecast methodology and assumptions. Final report, November 1983, 14:36264 (R;US)
GRI (Gas Research Institute) 1983 baseline projection forecast summary. Final report, 14:36263 (R;US)
GRI (Gas Research Institute) 1984 baseline project forecast methodology and assumptions. Final report, July 1985, 14:36267 (R;US)
GRI (Gas Research Institute) 1984 baseline projection forecast summary. Final report, 14:36266 (R;US)

GRI (Gas Research Institute) baseline projection summary. Final report, 14:36262 (R;US)

ENERGY DENSITY
Density functional theory and f electron systems, 14:37693 (BA;US)

ENERGY EFFICIENCY
Performance monitoring protocols, 14:36393 (R;US)
[Discussions with International Energy Agency's Center for the Analysis and Dissemination of Demonstrated Energy Technologies concerned with database and analysis study series of reports, Sittard, Netherlands, May 22–26, 1989]: Foreign trip report, 14:37821 (R;US)

ENERGY EXPENSES
GRI (Gas Research Institute) 1983 baseline projection forecast summary. Final report, 14:36263 (R;US)
GRI (Gas Research Institute) 1984 baseline projection forecast summary. Final report, 14:36266 (R;US)

ENERGY FACILITIES
Effective implementation of safeguards and security requirements, 14:37790 (R;US)
Planning for large-scale construction projects. A socio-economic guide for communities, industry, and government, 14:37282 (R;CA)

ENERGY MANAGEMENT
Budgetary incentives for municipal energy management, 14:36425 (R;US)
Business guide to energy performance contracting. Final report, 14:36392 (R;US)

ENERGY MODELS
GRI (Gas Research Institute) 1983 baseline project forecast methodology and assumptions. Final report, November 1983, 14:36264 (R;US)
GRI (Gas Research Institute) 1984 baseline project forecast methodology and assumptions. Final report, July 1985, 14:36267 (R;US)

ENERGY SECURITY ACT
Cool Water Coal Gasification Program: Monitoring Review Committee meeting report, Washington, D.C., July 12, 1988, 14:35540 (R;US)

ENERGY SOURCE DEVELOPMENT
Alberta/Canada Energy Resources Research Fund annual review, 1987-1988, 14:36238 (R;CA;In English and French)
Cost effectiveness, 14:35656 (R;NO)

Fission barriers for r-process nuclei and implications for astrophysics, 14:37636 (R;US)

FISSION NEUTRONS
DNA exchange in mice spleen at early periods following fast neutron irradiation with different energy rate, 14:37378 (RA;SU;In Russian)
Mass-split dependence of the pre- and post-scission neutron multiplicities for fission of ^{251}Es, 14:37607 (R;AU)
Measurement and statistical model analysis of pre-fission neutron multiplicities, 14:37606 (R;AU)

FISSION PRODUCT RELEASE
Correlation of recent fission product release data, 14:36110 (R;US)
Fission products plate-out analysis code in the HTGR: PLAIN, 14:36021 (R;JP;In Japanese)

FISSION PRODUCTS
A sensitivity of aerosol agglomeration and deposition using the MAEROS model, 14:36188 (BA;US)
Characterization and chemistry of fission products released from LWR fuel under accident conditions, 14:36184 (BA;US)
Iodine volatility, 14:36186 (BA;US)
LWR aerosol containment experiments (LACE) program and initial test results, 14:36187 (BA;US)
Mass spectrometric study of the release of volatile fission products from irradiated LWR fuel, 14:36185 (BA;US)
Radionuclide distribution in TMI-2 reactor building basement liquids and solids, 14:36193 (BA;US)
Results of surface activity and radiation field measurements made during surface decontamination experiments conducted at TMI-2, 14:36194 (BA;US)
TMI-2 core debris analytical methods and results, 14:36191 (BA;US)
TMI-2 leadscrew radionuclide deposition and characterization, 14:36192 (BA;US)

FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT

FISSURED FORMATIONS
See FRACTURED RESERVOIRS

FLAMES
Enhanced flame stability and soot radiation using electric fields. Annual report, July 1987-July 1988, 14:35687 (R;US)
Suppression of soot in flames by alkaline-earth and other metal additives, 14:36866 (R;US)

FLAVOR MODEL
B->$X_s e^+ e^-$ in the six-quark model, 14:37538 (J;NL)
Enhanced CP violations in hadronic charm decays, 14:37542 (J;NL)

FLOODS
High temperature flood injury of woody swamp seedlings, 14:35916 (J;US)

FLOW (FLUID)
See FLUID FLOW

FLOWMETERS
Effect of diffusion on flow-rate time-of-flight measurements, 14:37136 (RA;SU;In Russian)

FLUE GAS
Clean Coal Technology Demonstration Program: Draft Programmatic Environmental Impact Statement, 14:35565 (R;US)
High-sulfur spray dryer Shawnee test program: Characterization of 10-MW spray-dryer electrostatic precipitator by-product: Final report, 14:35963 (R;US)

FLUID FLOW

LAMINAR FLOW
MULTIPHASE FLOW
SOLIDS FLOW
TURBULENT FLOW
TWO-PHASE FLOW
A central difference type approximation of convection in fluid flow, 14:36977 (R;US)
A discrete fracture model for a hot dry rock geothermal reservoir, 14:35941 (R;US)
Long-term degradation of dilute polyacrylamide solutions in turbulent pipe flow, 14:36422 (R;US)

FLUID MECHANICS
See also HYDRODYNAMICS
CFD (computational fluid dynamics) research for minisupercomputers: a Yale/UTRC program. Final report, 15 February 1987-14 October 1988, 14:37478 (R;US)
Computational fluid dynamics (CFD): element-by-element analysis for advanced computers. Final report, 1 April 1987-14 November 1988, 14:37479 (R;US)

FLUIDIZED BED
See FLUIDIZED BEDS

FLUIDIZED BED BOILERS
Tube wastage in FBC boilers at Summerside - causes and resolution, 14:37022 (R;CA)
Tube wastage in FBC boilers at Summerside - causes and resolution, 14:35587 (R;CA)

FLUIDIZED BED HEAT EXCHANGERS
Tube wastage in FBC boilers at Summerside - causes and resolution, 14:37022 (R;CA)

FLUIDIZED BEDS
Electrically stabilized expanded beds for sorption separations, 14:36706 (R;US)
The selective oxidation desulfurization process: bench-scale studies: Final report, 14:35532 (R;US)

FLUIDIZED-BED COMBUSTION
Clean Coal Technology Demonstration Program: Draft Programmatic Environmental Impact Statement, 14:35565 (R;US)
Modelling of sulphur dioxide capture in fluidized bed combustion, 14:35593 (R;SE)
Modelling of sulphur dioxide capture in fluidized bed combustion, 14:35594 (R;SE)
Modelling of sulphur dioxide capture in fluidized bed combustion, 14:35593 (R;SE)

FLUIDIZED-BED COMBUSTORS
Contribution of dynamics and erosion for small tube arrays in fluidized beds, 14:35580 (R;US)

FLUORINATED ALIPHATIC HYDROCARBONS
The equation of state of perfluorododecane to 48 GPa, 14:36847 (R;US)

FLUORINE 19 BEAMS
Shape coexistence at high spin in ^{187}Au, 14:37593 (R;FR)

FLUOROD
See RPL DOSEMETERS

FLY ASH
Fly ash/cement packing for Lingan Mine: final appraisal and trial proposal, 14:35561 (R;CA)
Leaching characteristics of incinerator residues and potential for modification of leaching, 14:36431 (R;NL)
Secondary atomization of coal-water fuels for gas turbine applications: Final report, 14:35581 (R;US)
Structural-engineering studies on the use of filter dusts from waste-incinerator flue gas cleaning as an aggregate bitumen in road construction, 14:36420 (R;DE;In German)
Trace metal removal by iron coprecipitation: Field evaluation: Final report, 14:35960 (R;US)

FOG (SPRAYS)
See SPRAYS

FOILS
An improved hibachi support structure for electron-beam diode foils, 14:36963 (R;US)
Exploding metallic foils and fuses: A computational modeling update, 14:37006 (R;US)
Foil implosion studies on PEGASUS, 14:37686 (R;US)
Plasma flow switch characterization for the Los Alamos Foil Implosion Project, 14:37012 (R;US)
The Mark IX generator, 14:37004 (R;US)

FOLIAGE

GLUCOSE
Glucose yields from the solvolysis of wood and pure cellulose by anhydrous Hydrogen Fluoride vapor, 14:35869 (BA;US)
Quantitative infrared spectroscopy of glucose in blood using partial least-squares analyses, 14:37300 (R;US)
Wood sugars to energy-intensive organic chemicals: Phase 1. Final report, 14:35858 (R;US)
GOBAR GAS
See METHANE
GOLD
Common factors controlling grain and phase boundary energy, 14:36517 (BA;FR)
Contribution of lattice matching to the interfacial energy between dissimilar materials, 14:36622 (BA;FR)
Determination of trace gold in rocks and minerals by neutron activation analysis, 14:36705 (R;CN;In Chinese)
EBIC and DLTS measurements of SI- and polycrystalline silicon, 14:36673 (BA;FR)
High resolution electron microscopy studies of the atomic structure of interfaces in magnetic sandwiches, 14:36494 (BA;FR)
Interdiffusion of Au/Ni/Cr on silicon substrate, 14:36529 (BA;FR)
Optical properties of metals and alloys: Au, Ag, FeRh, $AuAl_2$, and $PtAl_2$, 14:36604 (D;US)
Present limitations on the lattice imaging of grain boundaries, 14:37668 (BA;FR)
X-ray diffraction studies of the structure and properties of grain boundaries, 14:36485 (BA;FR)
GOLD 187
Shape coexistence at high spin in ^{187}Au, 14:37593 (R;FR)
GOLD 197 TARGET
Attained energy densities and neutral pion spectra in nucleus-nucleus collisions at 200 GeV/nucleon, 14:37597 (R;US)
Excitation and multiple dissociation of projectiles at intermediate energy, 14:37599 (R;US)
Heavy ion reaction studies of Nb_Au at E/A = 50, 75 and 100 MeV, 14:37600 (J;NL)
Multiplicity fluctuations in finite rapidity windows. Intermittency or quantum statistical correlation?, 14:37540 (J;NL)
Survey of results from Brookhaven Experiment 802 at the AGS, 14:37596 (R;US)
GOLD ALLOYS
Optical properties of metals and alloys: Au, Ag, FeRh, $AuAl_2$, and $PtAl_2$, 14:36604 (D;US)
TEM determination of incoherent twin-boundary structure in $L1_2$ ordered alloys, 14:36497 (BA;FR)
GONADS
Comparative radiosensitivity of oocytes of various stages of maturity, 14:37361 (RA;SU;In Russian)
GRADED LIE GROUPS
Canonical integration and analysis of periodic maps using non-standard analysis and life methods, 14:37709 (R;US)
GRAIN ALCOHOL
See ETHANOL

GRAIN BOUNDARIES
Chemical Reactions
Grain boundary chemistry contributions to intergranular hot cracking, 14:36513 (BA;FR)
Computerized Simulation
Computer simulation of special grain boundaries in metals and ionic materials, 14:37692 (BA;US)
Corrosion
Role of grain boundary structure on the electrochemical stability of passive films formed on high purity polycrystalline nickel, 14:36520 (BA;FR)
Cracks
Hydrogen embrittlement in grain boundaries studied by fatigue crack propagation in Al-Zn-Mg bicrystals, 14:36987 (BA;FR)
Design
Grain boundary design for desirable mechanical properties, 14:37674 (BA;FR)
Diffusion
Effect of high pressures on the mobility of atoms in grain boundaries, 14:36516 (BA;FR)
Dislocations
Grain boundary structure in HCP metals, 14:36490 (BA;FR)
Electronic Structure
Ab-initio calculation of the microscopic properties of a grain boundary in germanium, 14:36487 (BA;FR)
Molecular statics studies of grain boundaries: structure and energy of (001) twist boundaries, 14:37665 (BA;FR)
Segregation energies of phosphorus and sulfur in various relaxed structures of grain boundaries in Ni by tight-binding approximation, 14:36509 (BA;FR)
Embrittlement
Controlling embrittlement at grain boundaries in intermetallic compounds, 14:37676 (BA;FR)
Fatigue
Cyclic migration and fracture in solid solution alloys, 14:36988 (BA;FR)
Fracture Properties
Effect of manganese on intergranular fracture in low alloy steels, 14:36537 (BA;FR)
Interactions
Dynamic studies of deformation and fracture at grain boundaries, 14:36533 (BA;FR)
Mathematical Models
Extended CSL-model for grain boundary in layer structures, 14:37667 (BA;FR)
Mobility of dislocations in grain boundaries, 14:37673 (BA;FR)
Molecular dynamics study of the structure and properties of twist boundaries, 14:36669 (BA;FR)
Present limitations on the lattice imaging of grain boundaries, 14:37668 (BA;FR)
Microstructure
Grain boundary structure and phase transformations: a critical review of computer simulation studies and comparison with experiments, 14:37670 (BA;FR)
Structural analysis and properties of grain boundaries in hexagonal carbides, 14:36628 (BA;FR)
Migration
Dependence of diffusion-induced grain boundary migration on grain boundary structure, 14:36527 (BA;FR)
Diffusion induced grain boundary migration in Ni(Zn) polycrystals, 14:36523 (BA;FR)
Effect of high pressures on the mobility of atoms in grain boundaries, 14:36516 (BA;FR)
Effect of the triple junction on grain-boundary sliding in aluminum tricrystals, 14:36524 (BA;FR)
Strain-induced boundary migration (SIBM) in aluminum bicrystals each with a (211) tilt boundary, 14:36525 (BA;FR)
TEM study of diffusion-induced grain boundary migration in Ni-Cu diffusion couples, 14:36530 (BA;FR)
Mobility
Grain boundary diffusion of Co and Ni in bicrystalline and polycrystalline NiO, 14:36633 (BA;FR)
Migration of differently oriented grain boundaries measured on Fe-3wt%Si 37° (001) bicrystals, 14:36522 (BA;FR)
Phase Studies
TEM determination of incoherent twin-boundary structure in $L1_2$ ordered alloys, 14:36497 (BA;FR)
Phase Transformations
Search for experimentally observed grain boundary phase transitions, 14:36498 (BA;FR)
Potential Energy
Energy and structure of [100] aluminum grain boundary, 14:36519 (BA;FR)
Potentials
Measurements of the elastic constants, the specific heat and the entropy of grain boundaries by means of ultra-fine grained materials, 14:36541 (BA;FR)
Spatial Distribution
Influence of doping elements on the grain boundary characteristics in alumina, 14:36632 (BA;FR)
Stresses
Effect of grain-boundary structure on stress corrosion cracking in αCu-Al alloy bicrystals, 14:36536 (BA;FR)
Symmetry
The topological structure of grain boundaries, 14:36477 (R;US)
Thermodynamic Properties
Grain boundary structure and phase transformations: a critical review of computer simulation studies and comparison with experiments, 14:37670 (BA;FR)
Viscosity
Grain boundary internal friction and relationship to intergranular fracture, 14:36521 (BA;FR)
GRAND UNIFIED THEORY
Couplings in the heterotic superconformal three generation model, 14:37529 (R;DK)
GRANITES
See also PEGMATITES
Index of granitic rock masses in the state of Nevada: A compilation of data on 205 areas of exposed granitic rock masses in Nevada, 14:37407 (R;US)
GRANULATION (SOLAR)
See SOLAR GRANULATION
GRAPHITE
Compton profile of graphite and lithium-intercalated graphite, 14:36684 (BA;US)
Development of a thin wall graphite/polyimide composite pressure vessel with a large aspect ratio, 14:36884 (R;US)
The texture variation in extruded graphite, 14:36663 (R;US)
Two dimensional phase equilibria at surfaces, 14:37671 (BA;FR)
GRAPHITE FIBERS
See CARBON FIBERS
GRAPHITE MODERATOR
See GRAPHITE
GRASERS
See GASERS
GRAVITATIONAL FIELDS
Macroscopic constraints on string unification, 14:37548 (R;US)
GRAVITATIONAL LENSES
Gravitational lensing and finite beam-width effect on cosmic microwave anisotropies, 14:37442 (R;JP)
GREAT BRITAIN
See UNITED KINGDOM
GREAT LAKES
A large-sample extractor for determining organic contaminants in the Great Lakes, 14:37257 (R;CA)
GREAT LAKES REGION
See FEDERAL REGION V
GREENHOUSE EFFECT
Effects of climatic change on agricultural land resource potential, 14:37167 (RA;CA)
Experiences in modelling water and land resources within a climate change framework, 14:37166 (RA;CA)
GREENHOUSES
Large scale illumination using prism light guide and a Vortek lamp, 14:36399 (R;CA)
GRINDING MACHINES
Coal disintegration by high-pressure waterjet: Final report, 14:35514 (R;US)

Energy conservation in the industrial minerals sector. Comminution - Phase 3. Activity 4: monitoring and control of a dry grinding circuit using a particle size analyzer and programmable controllers, 14:36411 (R;CA)

GROUND DISPOSAL
Guide to land treatment of municipal waste water in Illinois, 14:36433 (R;US)

GROUND MOTION
Geotechnical instrument tation of the AOSTRA mine-assisted underground steaming trial, 14:35720 (RA;CA)

GROUND RELEASE
Test emission of uranium hexafluoride in atmosphere. Results interpretation, 14:37198 (R;FR;In French)

GROUND SOURCE HEAT PUMPS
Capacity of saturated or unsaturated soil to restore calories by gelation, 14:36202 (RA;CA;In English and French)

GROUND STATES
Spin value of ^{184}Ir ground state, 14:37627 (R;FR)

GROUND WATER
Acidification
Acidification and water pathways. What about the future?, 14:37273 (RA;NO)
Effects of air pollutants on groundwater quality in the Federal Republic of Germany, 14:37241 (RA;NO)
Precipitaton, surface and subsurface water chemistry in a tolerant hardwood forest basin, 14:37262 (RA;NO)

Chemical Composition
Conceptual model for analysing soil and groundwater acidification on regional scale. International symposium on acidification and water pathways, 14:37239 (RA;NO)
Size distribution patterns for trace elements in waters draining a small catchment, S.E. Norway, 14:37263 (RA;NO)

Contamination
Assessment of Basalt Waste Isolation Project's borehole mud pits soils and sediments for chemical constituents: Summary report, 14:35814 (R;US)
Liquid effluent study project plan, 14:35815 (R;US)

Corrosive Effects
Corrosion aggressiveness og groundwaters on the underground route in Warsaw, 14:37269 (RA;NO)

Flow Rate
Numerical modeling and tracer study of groundwater—Yenliao Nuclear Power Plant site, Taipei, Taiwan, June 5–12, 1988: Foreign trip report, 14:35796 (R;US)

Hydrology
Influence of spatial discretization in 3D groundwater flow calculations using the finite-element method, 14:37248 (R;SE)

Mathematical Models
Demonstration of a performance assessment methodology for high-level radioactive waste disposal in basalt formations, 14:35792 (R;US)
Systems analysis, long-term radionuclide transport, and dose assessments, Waste Isolation Pilot Plant (WIPP), southeastern New Mexico; March 1989, 14:35811 (R;US)

Monitoring
Managing data from a large-scale groundwater monitoring program, 14:37255 (R;US)

Nitrates
Fiscal year 1987 program report (Massachusetts Water Resources Research Center). Annual report, 14:37280 (R;US)

Ph Value
Attenution of acidity in groundwater flow systems, 14:37260 (RA;NO)

Recharge
Guide to land treatment of municipal waste water in Illinois, 14:36433 (R;US)

Water Pollution
Corrosion aggressiveness og groundwaters on the underground route in Warsaw, 14:37269 (RA;NO)
Drum centrifuge modelling of long-term pollutant migration through a soil layer, 14:37222 (R;GB)
Use of industrial-hygiene samplers for soil-gas measurement, 14:37221 (R;US)

Water Quality
Corrosion aggressiveness og groundwaters on the underground route in Warsaw, 14:37269 (RA;NO)

GROUND-WATER RESERVES
See AQUIFERS

H

HABITAT
Assessing the opportunity cost of fish mitigation activities in the Columbia River Basin, 14:35888 (RA;US)
Data needs for proposed pilot study, 14:35889 (RA;US)
Feasibility of implementing the least-cost model, 14:35887 (RA;US)

HADRON REACTIONS
Inclusion of correlations in the empirical selection of intranuclear cascade nucleons from high energy hadron-nucleus collisions, 14:37127 (J;NL)

HADRON-HADRON INTERACTIONS
Complete computation of high-p_T W and Z production in second-order QCD, 14:37536 (J;NL)

HAFNIUM
Health-hazard evaluation determination report No. 74-78-297, Amax Speciality Metals, Parkersburg, West Virginia, 14:37185 (R;US)
Low-temperature isotopic exchange in molecular hydrogen on films of transition and rare earth metals and their alloys with copper, 14:36813 (RA;SU;In Russian)

HAFNIUM 179
Intensive two-quantum cascades and fragmentation of quasiparticle states in some deformed nuclei, 14:37633 (R;SU;In Russian)

HAFNIUM ALLOYS
Breakdown mechanisms of Al_2O_3, Cr_2O_3 and SiO_2 scales in $H_2/H_2O/H_2S$ environments: Final report, Volume 1, 14:35538 (R;US)
Low-temperature isotopic exchange in molecular hydrogen on films of transition and rare earth metals and their alloys with copper, 14:36813 (RA;SU;In Russian)

HAFNIUM COMPLEXES
Electron structure and electrostatic potential of some neutral organophosphorus extractants and their complexes, 14:36818 (RA;SU)

HAFNIUM OXIDES
Phase relationships in high-temperature ceramics. Phase 1. Final report, 14:36610 (R;US)

HALIDES
See also BROMIDES
CHLORIDES
Metastable ordered compounds formed during epitaxial growth, 14:36539 (BA;FR)

HALL GENERATORS
See MHD GENERATORS

HANDLING (DATA)
See DATA PROCESSING

HANDLING (WASTES)
See WASTE MANAGEMENT

HANFORD RESERVATION
Assessment of Basalt Waste Isolation Project's borehole mud pits soils and sediments for chemical constituents: Summary report, 14:35814 (R;US)
Effective transition from panel board to CRT-based process control, 14:35776 (RA;US)
Hanford Environmental Dose Reconstruction Project: Monthly report, 14:37382 (R;US)

HARDNESS
Description of the Nano∆Indenter™; An ultra-low-load microhardness indentation test machine, 14:36996 (R;US)

HAZARDOUS MATERIALS
Health-hazard evaluation determination report No. 75-178-295, New York Telephone and Telegraph Company, 770 Broadway, New York, New York, 14:37183 (R;US)

Aerosols
Health-hazard evaluation determination report No. 75-109, 110, 112, 114-274, Fairbanks Weighing Division, Colt Industries, St. Johnsbury, Vermont, 14:37182 (R;US)
Dusts
Preliminary survey report: control technology support for sensor, Unimin Corporation, Dividing Creek Sand Plant, Millville, New Jersey, August 16, 1988, 14:37179 (R;US)
Evaluation
Assessment of Basalt Waste Isolation Project's borehole mud pits soils and sediments for chemical constituents: Summary report, 14:35814 (R;US)
Ground Disposal
Liquid effluent study project plan, 14:35815 (R;US)
In-Situ Processing
1988 DOE model conference proceedings: Volume 5, 14:35775 (R;US)
Indoor Air Pollution
Health-hazard evaluation determination report No. 74-78-297, Amax Speciality Metals, Parkersburg, West Virginia, 14:37185 (R;US)
Inventories
Methodology for hazardous waste surveys, 14:35779 (R;US)
Iron Oxides
Health-hazard evaluation determination report No. 73-185-256, Electromotive-Division, GMC (Plant 2), Chicago, Illinois, 14:37186 (R;US)
Materials Handling
Methane desorption in coal handling, 14:35548 (R;CA)
Transferring generic SARA/OSHA training to US Department of Energy facilities, 14:35825 (RA;US)
Occupational Exposure
Hazard Communication Project: reference manual, 14:37330 (R;US)
Sample Preparation
The preparation of TEM specimens from hazardous or difficult materials, 14:36681 (BA;US)
Storage
Regulatory requirements important to Hanford single-shell tank waste management decisions, 14:35801 (R;US)
Waste Disposal
1988 DOE model conference proceedings: Volume 1, 14:35771 (R;US)
Cost impact of potential RCRA (Resource Conservation Recovery Act) changes on New York State Utility coal-waste disposal. Final report, 14:35563 (R;US)
Lawrence Livermore National Laboratories Environmental Protection Department 1988 California legislative highlights, 14:36233 (R;US)
Trial-Burn Observation Guide. Final report, 14:36438 (R;US)
Waste Management
Summary report of capacity at commercial facilities. Volume 1. Summary report, 14:36435 (R;US)
Summary report of capacity at limited commercial and company-captive facilities. Volume 1. Draft report, 14:36436 (R;US)
Summary report of capacity at limited commercial and company-captive facilities. Volume 2. Draft report, 14:36437 (R;US)
Water Pollution
Persistent Marine Debris, challenge and response: the Federal perspective, 14:37274 (R;US)

HAZARDS

INCINERATORS
See also WATERWALL INCINERATORS
Structural-engineering studies on the use of filter dusts from waste-incinerator flue gas cleaning as an aggregate bitumen in road construction, 14:36420 (R;DE;In German)
Trial-Burn Observation Guide. Final report, 14:36438 (R;US)

INCLUSION COMPLEXES
See CLATHRATES

INCLUSIONS
Applications of inclusion in separation science, 14:35915 (BA;US)

INCOLOY 800
Fracture mechanics investigations for components of the steam cycle in an HTR electricity producing plant, 14:36571 (R;DE;In German)

INCOLOY 800H
Heat exchanger development for steam-injected Brayton cycle: Final report for period September 30, 1984 to April 30, 1988, 14:36577 (R;US)

INCOMPRESSIBLE FLOW
Dynamics of colloidal dispersions via lattice-gas models of an incompressible fluid, 14:37488 (R;US)

INCONEL 600
Cracking of Alloy 800 tubing in superheated steam sections of the solar one central receiver, 14:36591 (BA;US)
Evaluation of SCC test methods for Inconel 600 in low-temperature aqueous solutions, 14:36175 (BA;US)
Role of residual stress in stress corrosion cracking in Alloy 600 tubes - Part I, 14:36592 (BA;US)

INCONEL 617
Heat exchanger development for steam-injected Brayton cycle: Final report for period September 30, 1984 to April 30, 1988, 14:36577 (R;US)

INCONEL 718
Microstructure and stress corrosion resistance of alloys X-750, 718, and A-286 in LWR environments: Final report, 14:36544 (R;US)

INCONEL X750
Microstructure and stress corrosion resistance of alloys X-750, 718, and A-286 in LWR environments: Final report, 14:36544 (R;US)

INDIA
Agreement of 27 September 1988 between the International Atomic Energy Agency and the Government of India for the application of safeguards in connection with the supply of a nuclear power station from the Union of Soviet Socialist Republics, 14:35837 (R;XA)
Indoor spatial monitoring of combustion-generated pollutants (TSP, CO, and BAP) by Indian cookstoves, 14:37162 (R;US)
Seismic zoning in India, 14:37408 (R;XA)

INDIUM
A test system for thermomechanical fatigue of solder joints, 14:36585 (R;US)
Novel approaches to ionic chromatography: Progress report, December 1, 1987–June 30, 1989, 14:36707 (R;US)

INDIUM COMPLEXES
Hydration and solvation energies and thermodynamic distribution coefficient of some extraction systems (Extraction systems: TBP-UO_2Cl_2($ThCl_4$)-HCL; AA-$InCl_3$-HCl, where AA-acetylacetone.), 14:36825 (RA;SU)
Ir, NMR and conductivity study of extracts and the character of the mutual influence of metals in their extraction with alkylammonium salts, 14:36716 (RA;SU)

INDIUM PHOSPHIDES
Absolute pressure derivatives of deep level defects in III-V semiconductors, 14:36697 (BA;US)

INDIUM SELENIDE SOLAR CELLS
Materials analysis and device optimization of $CuInSe_2$ solar cells: Annual subcontract report, 16 January 1987–15 January 1988, 14:35913 (R;US)
Two-terminal $CuInSe_2$-based cascade cells: Annual subcontract report, 16 January 1987–15 January 1988, 14:35911 (R;US)
INDOLES

NATURAL GAS LIQUIDS
The physics of pattern formation at liquid interface: Progress report, June 1, 1988–May 31, 1989, 14:37664 (R;US)
LITHIUM
Introduction to lithium batteries. General document, 14:36220 (R;AU)
LITHIUM 7 TARGET
$^{7}Li(p,n)^{7}Be$ and $^{12}C(p,n)^{12}N$ reactions at 200, 300, and 400 MeV, 14:37579 (J;US)
LITHIUM ALLOYS
Vapor pressure over corrosion resistant alkali metal alloys, 14:36552 (RA;SU;In Russian)
LITHIUM CARBIDES
Staging in layer intercalates: Progress report, 1 June 1988–31 May 1989, 14:36667 (R;US)
LITHIUM CHLORIDES
Analysis of a thermochemical energy storage system with liquid absorbents, 14:36217 (RA;CA;In English and French)
Complexing in ternary chloride systems of alkali metals and lead, 14:36792 (RA;SU;In Russian)

LITHIUM COMPLEXES
Compton profile of graphite and lithium-intercalated graphite, 14:36684 (BA;US)

LITHIUM COMPOUNDS
See also LITHIUM CARBIDES
LITHIUM OXIDES
LITHIUM SILICATES
LITHIUM SULFIDES
LITHIUM TUNGSTATES
Investigations into physicochemical properties of lithium metaaluminate ceramics, 14:36636 (RA;SU;In Russian)
Polymorphic transitions in $LiIO_3$ crystals, 14:36809 (RA;SU;In Russian)
Prospects of ceramic tritium breeder materials, 14:37754 (R;FR)
Synthesis and analysis of high-pure lithium iodate monocrystals, 14:36810 (RA;SU;In Russian)
Synthesis and properties of $LiAlO_2$ lithium aluminate monocrystals, 14:36637 (RA;SU;In Russian)

LITHIUM FLUORIDES
Common factors controlling grain and phase boundary energy, 14:36517 (BA;FR)
Contribution of lattice matching to the interfacial energy between dissimilar materials, 14:36622 (BA;FR)

LITHIUM OXIDES
Lithium beryllates and their thermodynamic properties, 14:36790 (RA;SU;In Russian)

LITHIUM SILICATES
Interfacial characteristics of glass-ceramic matrix/SiC fiber composites, 14:36634 (BA;FR)

LITHIUM SULFIDES
Staging in layer intercalates: Progress report, 1 June 1988–31 May 1989, 14:36667 (R;US)

LITHIUM TUNGSTATES
Interaction of thallium (1) and lithium molybdates (tungstates), 14:36766 (RA;SU;In Russian)
Physicochemical features of Li_2MoO_4 and Li_2WO_4 behaviour under different methods of treatment, 14:36769 (RA;SU;In Russian)

LIVER
Experimental model of radiation injuries of liver, 14:37359 (RA;SU;In Russian)
Possible role of retrotransposons in carcinogenesis, 14:37389 (RA;US)

LMFBR TYPE REACTORS
Overview of the US program of controls for advanced reactors, 14:36027 (R;US)
Submerged gravel scrubber demonstration as a passive air cleaner for containment venting and purging with sodium aerosols—CSTF tests AC7–AC10, 14:36028 (R;US)
Supervisory control in a distributed, hierarchical architecture for a multimodular LMR, 14:36094 (R;US)

LOCA
See LOSS OF COOLANT

LOCAL GOVERNMENT
Municipal technologies: An assessment of energy technologies for the City of Chicago, 14:36426 (R;US)

LOCKS (SECURITY)
See PHYSICAL PROTECTION DEVICES

LOCOMOTIVES
Software development for a microprocessor based controller for ac-dc-ac diesel-electric freight locomotive power unit control, 14:36443 (R;CA)

LONG ISLAND SOUND
Marine biomass: New York State species and site studies. Annual report December 1982-November 1983, 14:35906 (R;US)

LONGITUDINAL PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES

LONGWALL MINING
Improvement of work safety and strain reduction when equipping thin faces through the development and testing of a turning and swinging installation for shield support units. Final report, 14:35596 (R;DE;In German)

LOS ALAMOS
A computer model of the ZTH energy system at Los Alamos, 14:37749 (J;US)

LOS ALAMOS MESON PHYSICS FACILITY
See LAMPF LINAC

LOS ALAMOS SCIENTIFIC LABORATORY
See LASL

LOSS OF COOLANT
ATHLET - an advanced system code for the analysis of thermohydraulic processes, 14:36152 (R;DE;In German)
Break location effects on PWR small break LOCA phenomena. Inadequate core cooling in lower plenum break test at LSTF, 14:36156 (R;JP)
Interfacing systems LOCAs at boiling water reactors, 14:36178 (BA;DE)
Use of source term code package in the ELEBRA MX-850 system, 14:36132 (R;BR;In Portuguese)

LOW ALLOY STEELS
New generation of welded semiautomatic for production of structures out of steels and aluminium alloys, 14:36566 (RA;SU;In Russian)

LOW DOSE IRRADIATION
New aspects in studying the effect of low dose ionizing radiations, 14:37370 (RA;SU;In Russian)

LOW-LEVEL RADIOACTIVE WASTES
1988 DOE model conference proceedings: Volume 1, 14:35771 (R;US)
1988 DOE model conference proceedings: Volume 2, 14:35772 (R;US)
1988 DOE model conference proceedings: Volume 3, 14:35773 (R;US)
1988 DOE model conference proceedings: Volume 4, 14:35774 (R;US)
A study of the use of crosslinked high-density polyethylene for low-level radioactive waste containers, 14:35794 (R;US)
Appalachian States Compact Low-Level Radioactive Waste management survey, 1987, 14:35799 (R;US)
Assessment of potential worker exposure for the Tumulus Disposal Demonstration Project: Fiscal year 1988 annual report, 14:35798 (R;US)
Below Regulatory Concern Owners Group: Assessment of the IMPACTS-BRC code: Final report, 14:35786 (R;US)
Below regulatory concern owners group: A general review of the IMPACTS-BRC Code: Final Report, 14:35785 (R;US)
Solidification of low-level radioactive waste at the Savannah River Site, 14:35818 (R;US)
Technology assessment guide for application of engineered sorbent barriers to low-level radioactive waste disposal sites, 14:35802 (R;US)
Treatment needs for Greater-Than-Class C low-level waste, 14:35804 (R;US)

LUCIE-1 REACTOR
SRO supervisory skills, 14:36005 (RA;US)

LUCIE-2 REACTOR
SRO supervisory skills, 14:36005 (RA;US)

LURGI-RUHRGAS PROCESS
Coking of oil sand, asphaltenes and residual oils in the LR-process, 14:35705 (RA;CA)

LWGR TYPE REACTORS
See also CHERNOBYLSK-4 REACTOR
Calculational method for individual pipeline tracing in channel nuclear reactors, 14:36018 (RA;SU;In Russian)
Transients in boiling water cooled channel reactors under loss of control at low power levels, 14:36016 (RA;SU;In Russian)

LWR TYPE REACTORS
See WATER COOLED REACTORS

LYMPHOCYTES
Biological effects of ^{137}Cs, incorporated into organism of rats, 14:37367 (RA;SU;In Russian)
HTLV-I, HIV, and human T cell growth, 14:37329 (RA;US)

LYMPHOID CELLS
See LYMPHOCYTES

LYMPHOKINES
HTLV-I, HIV, and human T cell growth, 14:37329 (RA;US)

M

M CODES
A sensitivity of aerosol agglomeration and deposition using the MAEROS model, 14:36188 (BA;US)

MA 754
See NICKEL BASE ALLOYS

MA 956
See IRON BASE ALLOYS

MACHINE PARTS
A review of the development of a program to generate inspection programs for the OGP [Optical Gaging Products] optical CMM [Coordinate Measuring Machine], 14:37147 (R;US)

MACHINE TOOLS
See also GRINDING MACHINES
A proposal of more expedient methods of testing machine tools, 14:36998 (R;US)
PFMS [Precision Flexible Manufacturing System] tool characterization study at Lawrence Livermore National Laboratory, 14:36587 (R;US)

MADAGASCAR
Positive effects of the bemolanga tar sands exploitation, 14:35737 (RA;CA)

MAGMA SYSTEMS
Research drilling in young silicic volcanoes, 14:37413 (R;US)

MAGNESIUM
Measurements of the elastic constants, the specific heat and the entropy of grain boundaries by means of ultra-fine grained materials, 14:36541 (BA;FR)

MAGNESIUM 24 TARGET
Isovector and isoscalar spin-flip excitations in even-even s-d shell nuclei excited by inelastic proton scattering, 14:37630 (R;FR)

MAGNESIUM 26 TARGET
Isovector and isoscalar spin-flip excitations in even-even s-d shell nuclei excited by inelastic proton scattering, 14:37630 (R;FR)

MAGNESIUM ALLOYS
Cyclic migration and fracture in solid solution alloys, 14:36988 (BA;FR)
Hydrogen embrittlement in grain boundaries studied by fatigue crack propagation in Al-Zn-Mg bicrystals, 14:36987 (BA;FR)
Star-disclination in a ferro-elastic material B19 MgCd alloy, 14:36543 (BA;FR)
Star-lisclination in a ferro-elastic material B19 MgCd alloy, 14:36491 (BA;FR)

MAGNESIUM OXIDES
Contribution of lattice matching to the interfacial energy between dissimilar materials, 14:36622 (BA;FR)
Effect of thermal aging on mechanical and electrical properties of the MgO-partially stabilized zirconia bodies, 14:36526 (BA;FR)
Electron microscopy studies of diffusion-induced grain boundary migration in ceramics, 14:36535 (BA;FR)
Equilibrium crystal shapes and surface phase diagrams at surfaces in ceramics, 14:36631 (BA;FR)
Hetero- and homo-phase boundaries in ceramic oxides, 14:36626 (BA;FR)
Influence of doping elements on the grain boundary characteristics in alumina, 14:36632 (BA;FR)
Neutron transmission of single crystal MgO filters, 14:37097 (J;NL)
Phase equilibria and interfacial phenomena in the Mg-Al-O system at 800°C, 14:36500 (BA;FR)
Structure of Ni/MgO interfaces, 14:36489 (BA;FR)

MAGNESIUM PHOSPHATES
Determination of specific heats of double magnesium and alkali metal orthophosphates (Alkali metals: Li-Cs.), 14:36753 (RA;SU;In Russian)
On the kinetics of dehydration of double orthophosphate hexahydrates $MgMPO_4$, 14:36749 (RA;SU;In Russian)

MAGNESIUM SILICATES
Laser action in chromium-activated forsterite for near-infrared excitation, 14:36959 (R;US)

MAGNESIUM SULFATES
Coal ash deposition, interaction with metal substrates and deposit build up: Summary report, 26 February 1989–25 May 1989, 14:35586 (R;US)

MAGNET COILS
A comparison of the conductor requirements for energy storage devices made with ideal coil geometries, 14:36928 (J;US)

MAGNETIC COILS
See MAGNET COILS

MAGNETIC COMPRESSION
A simultaneous helical generator, 14:37011 (R;US)
Applications of the computer codes FLUX2D and PHI3D for the electromagnetic analysis of compressed magnetic field generators and power flow channels, 14:37480 (R;US)
Design of an explosive pulsed power system for driving 16-MA plasma flow switch experiments, 14:37734 (R;US)
Explosively formed fuse opening switches for use in flux-compression generator circuits, 14:37007 (R;US)

MAGNETIC FIELDS
Determination of magnetic field direction in tokamaks from laser-induced Lyman-α fluorescence, 14:37717 (R;FR)
Magnetic field decay in model SSC dipoles, 14:36913 (J;US)
Standard-II and extended tests of the Swiss LCT-coil, 14:36915 (J;US)
Studies of time dependence of fields in Tevatron superconducting dipole magnets, 14:36921 (J;US)
Study of weak solar magnetic fields. Final report, 1 December 1987-30 November 1988, 14:37424 (R;US)
Time variations of fields in superconducting magnets and their effects on accelerators, 14:36920 (J;US)

MAGNETIC LEVITATED TRAINS
See LEVITATED TRAINS

MAGNETIC MATERIALS
Cross-sectioning magnetic thin films for TEM, 14:36685 (BA;US)

MAGNETIC STORMS
Global density specification in the lower thermosphere. Final report, 15 June 1985-17 June 1988, 14:37448 (R;US)

MAGNETITE
Stemming temperature changes during emplacement: Experimental results and analysis, 14:36982 (R;US)

MAGNETIZATION
Anomalous temperature dependence of Cu NMR line width and magnetization in $YBa_2Cu_3O_{7-\delta}$, 14:36642 (R;US)

MAGNETOHYDRODYNAMIC CHANNELS
See MHD CHANNELS

MAGNETOHYDRODYNAMIC GENERATORS
See MHD GENERATORS

MAGNETOPAUSE
Magnetopause structure and dynamics: Issues for GEM [geospace environment modeling], 14:37456 (R;US)

MAGNETOSPHERE
See EARTH MAGNETOSPHERE

MAGNETOTAIL
Parallel electric fields in a simulation of magnetotail reconnection and plasmoid evolution, 14:37455 (R;US)

MAHOGANY TREES
See TREES

MAINTENANCE FACILITIES
Radiological survey of San Diego Bay, 14:37279 (R;US)

MAIZE
DNA modification of Mu elements in maize, 14:37313 (RA;US)
Regulation of the maize suppressor-mutator element, 14:37287 (RA;US)

MALIGNANCIES
See NEOPLASMS

MAMMARY GLANDS
Some questions of blastomogenic effect of internal irradiation on mammary gland, 14:37366 (RA;SU;In Russian)

MAN
Mobile genetic elements, spontaneous mutations, and the assessment of genetic radiation hazards in man, 14:37342 (RA;US)

MANATEES
Preliminary assessment of habitat protection needs for West Indian manatees on the east coast of Florida and Georgia. Final report, 14:37284 (R;US)

MANGANESE
Effect of manganese on intergranular fracture in low alloy steels, 14:36537 (BA;FR)

MANGANESE ALLOYS
See also MONEL 400
Development of an engineering definition of the extent of J singularity controlled crack growth, 14:36579 (R;US)
On the properties of new corrosion-resistant high-strength steel 06Kh17G19N3AB and it welded joints, 14:36567 (RA;SU;In Russian)
Studies on work-softening processes in the hot forming of austenitic steel, 14:36581 (TJ;US)

MANGANESE COMPOUNDS
See also MANGANESE OXIDES
Systems MVO_3-$Zn(VO_3)_2$ and MVO_3-$Mn(VO_3)_2$, where M=Li, Rb, Cs, 14:36770 (RA;SU;In Russian)

MANGANESE OXIDES
Hetero- and homo-phase boundaries in ceramic oxides, 14:36626 (BA;FR)

MANITOBA
Application by Greater Winnipeg Gas Company and ICG Utilities (Manitoba) Ltd. for an order or orders approving rates for the sale of natural gas from November 1, 1988 to October 31, 1990, flowing from new gas supply contracts, 14:35677 (R;CA)
Final report of the Commission of Inquiry into Gasoline Pricing in the province of Manitoba, 1987, 14:35655 (R;CA)
Manitoba Hydro application for an order requesting a general rate review and approval of certain rate adjustments effective April 1, 1989, 14:36339 (R;CA)
Summary of phytoplankton data for the Nelson River and Rat-Burntwood lakes, 1987, 14:37235 (R;CA)
Water chemistry/water discharge relationships within the Churchill River diversion and Lake Winnipeg regulation region, Manitoba, Canada, 14:35895 (R;CA)

MANUFACTURERS
Assessment of unitary cool storage systems: Final report, 14:36413 (R;US)

MANUFACTURING FACILITIES
See INDUSTRIAL PLANTS

MANY-BODY PROBLEM
See also THREE-BODY PROBLEM

METHANOL

METHYLBENZENE
See TOLUENE

METHYLENE CHLORIDE
Macromolecular coal structure as revealed by novel diffusion tests: Quarterly technical report, January 15, 1989–April 15, 1989, 14:35553 (R;US)

METROPOLITAN AREAS
See URBAN AREAS

MHD CHANNELS
MHD plasma velocity measurement using correlation techniques, 14:36359 (BA;US)

MHD GENERATOR AERL MARK VII
Strategies for combatting problems caused by cathode slag shorting, 14:36353 (BA;US)
Voltage-current characteristics of the insulator gaps in a slagging MHD generator, 14:36354 (BA;US)

MHD GENERATOR CDIF
Coal-fired MHD power train performance test results, 14:36355 (BA;US)
Coal-fired MHD topping cycle test progress at the component development and integration facility, 14:36350 (BA;US)
Status report of 1A test train hardware performance and development, 14:36356 (BA;US)

MHD GENERATOR CFFF
Two dimensional modeling of fluid mechanics, heat transfer, and NO decomposition in the CFFF radiant furnace, 14:36358 (BA;US)

MHD GENERATORS
See also COAL-FIRED MHD GENERATORS
MHD GENERATOR AERL MARK VII
Advanced superconducting MHD magnet design for a retrofit power plant, 14:36918 (J;US)
Diagnostic development and support of MHD test facilities: Progress report, July–September 1987, 14:36345 (R;US)
Experimental investigation of factors affecting the cathode wall slag layer resegmentation frequency, 14:36351 (BA;US)
Materials tests in support of MHD steam bottoming plant, 14:36357 (BA;US)

MICE
Genetics of early embryo survival, 14:37314 (R;US)

MICROCOMPUTERS
Driver and controller for the Odrenok computer, 14:37085 (R;SU;In Russian)
Practical use of personal computer based methods for NPP operational safety assessment, 14:35979 (RA;XA)
SALP-PC - A fault tree code on personal computer for plant safety assessment, 14:35980 (RA;XA)

MICROPROCESSORS
A radiation-hardened 16/32-bit microprocessor, 14:37130 (R;US)
Power quality: a utility perspective, 14:36320 (RA;US)

MICROWAVE EQUIPMENT
See also SQUID DEVICES
Real-time optical processor for synthetic aperture radar image formation, 14:37020 (BA;US)

MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION

MILITARY EQUIPMENT
Laboratory evaluation of MIL-T-83133 JP-8 fuel in army diesel engines. Interim report, October 1984-January 1988, 14:35666 (R;US)
Technology selection criteria and methodology for prioritizing energy research and development programs. Final report, 14:36252 (R;US)

MILITARY FACILITIES
Evaluation criteria guide for water-pollution prevention, control, and abatement programs. Technical manual, 14:37281 (R;US)

MILITARY STRATEGY
Postwar US conventional military policy: Lessons and implications for the seventh era and beyond, 14:36457 (R;US)

MILLING
Characterization of radioactive long-lived dust present in uranium mines and mills atmospheres, 14:35750 (RA;CA)

MINE ROADWAYS
The application of rock bolt design methods to a proposed 7 West crosscut, Prince Mine, Sydney Coalfield, N.S., 14:35568 (R;CA)

MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS

MINERAL INDUSTRY
Preliminary survey report: control technology support for sensor, Unimin Corporation, Dividing Creek Sand Plant, Millville, New Jersey, August 16, 1988, 14:37179 (R;US)

MINERAL RESOURCES
See also NATURAL GAS DEPOSITS
PETROLEUM DEPOSITS
URANIUM DEPOSITS
Central American resource studies, 14:36236 (R;US)
Potential supply of minerals from the White Mountains National Recreation Area and Part of the North Steese National Conservation Area Alaska. Appendix A- potential mineral supply analysis methodology, 14:36237 (R;US)

MINERALS
See also CARBONATE MINERALS
GARNETS
ZEOLITES
Alkalinity production in soil and rock: A useful concept for understanding acidification of soil and freshwater, 14:37259 (RA;NO)
Deformations in structure of the scapolites from northeast, Brazil, 14:36708 (R;BR;In Portuguese)

MINERS
Comparing personal alpha dosimetry with the conventional area monitoring-time weighting methods of exposure estimation: a Canadian assessment, 14:37641 (R;CA)

MINES
See also COAL MINES
URANIUM MINES
Identification of nonuranium mines which present a radon risk through measurements of exhaust air, 14:35834 (RA;CA)

MINING EQUIPMENT
See also CUTTING MACHINES
ROOF BOLTS
Survey of microprocessor based performance monitoring devices in Canadian surface coal and oil sands mines in 1987, 14:35572 (R;CA)

MINKOWSKI SPACE
Quantum mechanical stabilization of Minkowski signature wormholes, 14:37708 (R;US)

MISGURNUS
See FISHES

MIXED OXIDE FUELS
Remote-controlled NDA [nondestructive assay] systems for feed and product storage at an automated MOX [mixed oxide] facility, 14:35757 (R;US)

MIXER-SETTLERS
Recent advances in centrifugal contactor design, 14:35822 (J;US)

MM-0011
See NICKEL BASE ALLOYS

MMS
See METHYL METHANESULFONATE

MOBILE POLLUTANT SOURCES
Atmospheric modeling of air pollution. September 1984-March 1988 (Citations from the NTIS data base). Report for September 1984-March 1988, 14:37194 (R;US)

MODELS (COSMOLOGICAL)
See COSMOLOGICAL MODELS

MODELS (CRYSTAL)
See CRYSTAL MODELS

MODELS (MATHEMATICAL)
See MATHEMATICAL MODELS

MODELS (PLASMA)
See PLASMA SIMULATION

MODES (SINGLE-PARTICLE)
See SINGLE-PARTICLE MODES

MOLDS
See FUNGI

MOLECULAR STRUCTURE
A soliton mechanism for DNA melting: Progress report, November 1, 1988–October 31, 1989, 14:37298 (R;US)
Generating alignments of genetic sequences, 14:37285 (R;US)

MOLTEN IRON PUREGAS PROCESS
Behaviour of secondary and trace elements during coal gasification in an iron bath, 14:35534 (R;DE;In German)

MOLTEN SALT FUELED REACTORS
To the study of dynamics of a homogeneous reactor with circulating fuel, 14:36069 (RA;SU;In Russian)

MOLYBDATES
Connection between structure of alkali metal molybdates and tungstates and their spectral and energetic characteristics, 14:36763 (RA;SU;In Russian)
Double sodium molybdates with rubidium and cesium, 14:36767 (RA;SU;In Russian)
Enthalpies of melting and polymorphic transformations of alkali metal molybdates, tungstates, and chromates, 14:36761 (RA;SU;In Russian)
Interaction of thallium (1) and lithium molybdates (tungstates), 14:36766 (RA;SU;In Russian)
Phase equilibria in the systems Li_2MoO_4-$BaMoO_4$-$Ln_2(MoO_4)_3$, Ln=La-Lu, Y. Luminescence of $Li_3Ba_2Ln_3(MoO_4)_8$-Nd^{3+}, 14:36760 (RA;SU;In Russian)
Physicochemical features of Li_2MoO_4 and Li_2WO_4 behaviour under different methods of treatment, 14:36769 (RA;SU;In Russian)
Thermodynamic properties of alkali metal chalcogenates, chromates, molybdates, and tungstates, 14:36764 (RA;SU;In Russian)

MOLYBDENUM
Atomic structure of tilt boundaries in Mo bicrystals, 14:36486 (BA;FR)
Deactivation of hydrotreatment catalysts used for coal liquids: Semi-annual report, 12 May 1988–11 November 1988, 14:35525 (R;US)
Ion exchange and soil attenuation of Gulf Coast and Great Plains soils: Final report, 14:37217 (R;US)
Oxygen segregation in 32°[001] molybdenum tilt grain boundary. I. Segregation sites determination, 14:36502 (BA;FR)
Oxygen segregation in 32°[001] molybdenum tilt grain boundary. II. Enthalpies of segregation determination from AES and grain boundary grooves measurements, 14:36503 (BA;FR)
Theoretical investigations of phonon anomalies in fcc La and W(001), 14:36603 (D;US)

MOLYBDENUM 100 REACTIONS
Multiple angular scattering of heavy ions $^{16-17}O$, ^{40}Ar, ^{86}Kr, ^{100}Mo at intermediate energies (20-90 MeV/u), 14:37682 (R;FR)

MOLYBDENUM 100 TARGET
MSC calculations with use of EMPIRE, 14:37617 (RA;XA)

MOLYBDENUM 92 TARGET
MSC calculations with use of EMPIRE, 14:37617 (RA;XA)

MOLYBDENUM COMPLEXES
Metal extraction by amides of carboxylic acids, 14:36719 (RA;SU)

MOLYBDENUM OXIDES
Physicochemical study of interaction in the systems Li_2O-TeO_2-M_nO_m (M-Cr, Mo, Ti; n=1.2; m=2.3), 14:36762 (RA;SU;In Russian)

MOLYBDENUM SILICIDES
SiC-$MoSi_2$ composites, 14:36638 (R;US)

MOLYBDENUM SULFIDES
Atomic oxygen-MoS_2 chemical interactions, 14:36844 (R;US)

MONEL 400
A review of the Model 5A uranium hexafluoride cylinder, 14:35769 (R;US)

MONITORED RETRIEVABLE STORAGE
MRS system study summary report, 14:35783 (R;US)
Quarterly report on program cost and schedule: First quarter FY 1989, 14:35782 (R;US)

MONITORING
See also AEROSOL MONITORING
Pilot program for water quality data collection by volunteers, 14:35898 (R;US)

MONITORING NETWORK
See MONITORING

MONITORS (AIR POLLUTION)
See AIR POLLUTION MONITORS

MONITORS (BEAM)
See BEAM MONITORS

MONITORS (FAILED ELEMENTS)
See FAILED ELEMENT MONITORS

MONITORS (REACTOR)
See REACTOR CONTROL SYSTEMS

MONOCARBOXYLIC ACIDS
Nuclear Medicine Program progress report for quarter ending December 31, 1988, 14:37320 (R;US)

MONOCLONAL ANTIBODIES
UW 21/123 monoclonal antibody in the radioimmunological detection of tumour tissue in the head and neck region, 14:37318 (R;DE;In German)

MORTARS
Abrasion-erosion resistance of various repairing mortars, 14:36679 (R;CA)

MOS TRANSISTORS
Development of new type of silicon detector with internal amplification, 14:37117 (R;DE;In German)
The use of glass slides for preparing cross-section TEM samples of discrete transistors, 14:36687 (BA;US)

MOTION DETECTION SYSTEMS
Field evaluation of new exterior video motion detection systems, 14:36892 (R;US)

MOTOR VEHICLE ACCIDENTS
Chemical and nuclear emergencies: Interchanging lessons learned from planning and accident experience, 14:37344 (R;US)

MOTTELSON-NILSSON MODEL
See NILSSON-MOTTELSON MODEL

MOUNTAINS
See also APPALACHIAN MOUNTAINS
ROCKY MOUNTAINS
YUCCA MOUNTAIN
Geological and geophysical investigations at Sierra del Medio massif - Argentine, 14:37403 (R;AR)

MUCOSA
See MUCOUS MEMBRANES

MUCOUS MEMBRANES
Formation and prevention of destructive changes in mucous membranes of stomach of irradiated rats, 14:37360 (RA;SU;In Russian)

MULTI-PHOTON PROCESSES
Studies of collisional and nonlinear radiative processes for development of coherent uv and xuv sources. Final report, 30 September 1985-29 September 1988, 14:37463 (R;US)

MULTIGROUP THEORY
Implatation of MC2 computer code, 14:36068 (R;BR;In Portuguese)

MULTIPHASE FLOW
Time- and volume-averaged conservation equations for multiphase flow, 14:36979 (R;US)

MULTIPLE PRODUCTION
Multiplicity fluctuations in finite rapidity windows. Intermittency or quantum statistical correlation?, 14:37540 (J;NL)

MULTIPLICITY
Development of neutron multiplicity counters for safeguards assay, 14:35790 (R;US)

MULTIPROCESSING
See PARALLEL PROCESSING

MULTIPROCESSORS
See ARRAY PROCESSORS

MUNICIPAL WASTES
Final Environmental Impact Statement. Qaste reduction, recycling, and disposal alternatives. Recycling potential assessment and waste stream forecast. Volume 2, 14:36434 (R;US)
Guide to land treatment of municipal waste water in Illinois, 14:36433 (R;US)
Leaching characteristics of incinerator residues and potential for modification of leaching, 14:36431 (R;NL)
Liquid fuels from the pyrolysis of municipal solid waste and its components, 14:36442 (BA;US)
Ocean waste disposal: outfall sewers. January 1977-April 1989 (Citations from the Selected Water Resources Abstracts data base). Report for January 1977-April 1989, 14:36441 (R;US)

MUON REACTIONS
Medium energy meson research, 14:37506 (R;US)

MUON-CATALYZED FUSION
Medium energy meson physics: [Progress report, 1981–1983], 14:37564 (R;US)

MUSCOVITE
Specimen cage modification for TEM in-situ shearing, 14:36693 (BA;US)

MUSEUMS
See EDUCATIONAL FACILITIES

MUTATIONS
See also CHROMOSOMAL ABERRATIONS
GENE MUTATIONS
SPONTANEOUS MUTATIONS
Energy and Technology Review, 14:37303 (R;US)
Mutation induction by MR(P) and its modification by various conditions, 14:37341 (RA;US)

N

NAI DETECTORS
Particle transport simulation for spaceborne, NaI gamma-ray spectrometers, 14:37129 (R;GB)

NAL SYNCHROTRON
See FERMILAB ACCELERATOR

NAPAP
National Air Audit System FY 1986-1987 national report. Final report, 14:37192 (R;US)
National Performance Audit Program; ambient air audits of analytical proficiency, 1987, 14:37189 (R;US)

NATIONAL ACCELERATOR LABORATORY
See FERMILAB ACCELERATOR

NATIONAL ACID PRECIPITATION ASSESSMENT PROGRAM
See NAPAP

NATIONAL DEFENSE
Postwar US conventional military policy: Lessons and implications for the seventh era and beyond, 14:36457 (R;US)

NATIONAL PROGRAM PLANS
Quarterly report on program cost and schedule: First quarter FY 1989, 14:35782 (R;US)

NATIONAL REACTOR TESTING STATION
See IDAHO NATIONAL ENGINEERING LABORATORY

NATURAL GAS
Annual outlook for oil and gas 1989, 14:35652 (R;US)
Canadian energy supply and demand, 1987-2005, 14:36260 (R;CA;In French)
Canadian energy supply and demand, 1987-2005, 14:36259 (R;CA)
DRI (Data Resources Inc.) Energy Model/GRI (Gas Research Institute) Hydrocarbon Model and IFCAM linkage. Final report, September 1983, 14:36265 (R;US)
DRI (Data Resources Inc.) Energy Model/GRI (Gas Research Institute) Hydrocarbon Model and IFCAM linkage. Final report, December 1984, 14:36268 (R;US)
Gas supply. Reference from the Lieutenant Governor in Council, 14:35678 (R;CA)
Transport and Storage (3.3) Subprogram for Gas Research Institute: status report - 1988 projects, 14:35684 (R;US)
Unconventional gas recovery program plan, FY 1989, 14:35667 (R;US)

NATURAL GAS DEPOSITS
See also NATURAL GAS FIELDS
Fracture-height growth containment using low-permeability bridging agents to stimulate tight gas sands with weak barriers. Topical report, January 1982-March 1985, 14:35680 (R;US)
Site selection for GRI (Gas Research Institute) cooperative tight-gas field research. Volume 1: screening of candidate tight gas formations. Topical report, May-July 1988, 14:35672 (R;US)

NATURAL GAS DISTRIBUTION SYSTEMS
Threshold-stress determination using tapered specimens and cyclic stresses, 14:35685 (BA;US)
Transport and Storage (3.3) Subprogram for Gas Research Institute: status report - 1988 projects, 14:35684 (R;US)

NATURAL GAS FIELDS
Cost effectiveness, 14:35656 (R;NO)
Reservoir Engineering and Treatment Design Technology. Annual report, December 1987-November 1988, 14:35676 (R;US)

NATURAL GAS FUEL CELLS
Solid-oxide fuel-cell technology development. Annual report, May 1, 1987-April 30, 1988, 14:36365 (R;US)

NATURAL GAS GATHERING SYSTEMS
See NATURAL GAS DISTRIBUTION SYSTEMS

NATURAL GAS INDUSTRY
Documentation and review of Eastern Gas Shales Technology. Annual report, April 1, 1984-March 31, 1985, 14:35671 (R;US)
GRI (Gas Research Institute) catalog of technical reports, 14:35668 (R;US)
Natural gas monthly: April 1989, 14:35674 (R;US)
Stretford chemistry and analytical methods handbook. Topical report, 14:35675 (R;US)

Study of data distributions and functions for the development of thermodynamic equations of state. Annual report, June 1987-May 1988, 14:35686 (R;US)
Technology 'Master List' data base management system. User's manual. Topical report, 14:35669 (R;US)
Transport and Storage (3.3) Subprogram for Gas Research Institute: status report - 1988 projects, 14:35684 (R;US)

NATURAL GAS LIQUIDS
Canadian energy supply and demand, 1987-2005, 14:36260 (R;CA;In French)
Canadian energy supply and demand, 1987-2005, 14:36259 (R;CA)
Petroleum supply annual 1988: Volume 1, 14:35651 (R;US)

NATURAL GAS WELLS
Influence of natural fractures on hydraulic fracture propagation, 14:35634 (B;US)
Unique completion practices in a horizontal well, 14:35679 (RA;CA)

NATURAL GASOLINE
See NATURAL GAS LIQUIDS

NATURAL MUTATIONS
See SPONTANEOUS MUTATIONS

NAVAL PETROLEUM RESERVE
The occurrence and status of candidate species listed by the US Fish and Wildlife Service on Naval Petroleum Reserve No. 1, Kern County, California, 14:37207 (R;US)

NAVAL REACTORS
See SHIP PROPULSION REACTORS

NAVIER-STOKES EQUATION
See NAVIER-STOKES EQUATIONS

NAVIER-STOKES EQUATIONS
Numerical solution of the Navier-Stokes equations for three-dimensional incompressible flows with open boundaries, 14:37484 (R;US)

NEGATIVE IONS
See ANIONS

NEGATONS
See ELECTRONS

NEGATRONS

NEUTRALIZATION (CHEMICAL)
See PH VALUE

NEUTRINO DETECTION
Progress report of a research program in experimental high energy physics, January 1, 1989–December 31, 1989, 14:37500 (R;US)

NEUTRINO-ELECTRON INTERACTIONS
See also ANTINEUTRINO-ELECTRON INTERACTIONS
Elastic scattering of muon-neutrinos and muon-anti-neutrinos by electrons, 14:37499 (R;US)

NEUTRINOS
See also ELECTRON NEUTRINOS
SOLAR NEUTRINOS
Neutrino counting in single photon experiments, 14:37509 (R;FR)
Precision electroweak physics with neutrinos at Los Alamos, 14:37526 (R;US)
Research in nuclear physics at low and intermediate energies, neutrinos and x rays: Final report, May 1980–August 1987, 14:37563 (R;US)
Study of atmospheric neutrino interactions with the Frejus detector, 14:37706 (R;FR)

NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS

NEUTRON BEAMS
Intensity of DNA synthesis in immuno-competent organs of animals in early periods after neutron irradiation with different energy values, 14:37377 (R;SU;In Russian)
Neutron transmission of single crystal MgO filters, 14:37097 (J;NL)

NEUTRON CAPTURE
See NEUTRON REACTIONS

NEUTRON DETECTORS
Multi-energy neutron detector for counting thermal neutrons, high-energy neutrons, and gamma photons separately, 14:37133 (R;US)

NEUTRON DOSIMETRY
Calculated and measured depth dose profiles in a phantom exposed to neutron radiation fields, 14:37662 (R;US)
Intercomparison of neutron-dosimetry techniques at the AFFRI (Armed Forces Radiobiology Research Institute) TRIGA reactor, 14:37098 (R;US)

NEUTRON REACTIONS
See also FAST FISSION
Analysis of threshold reaction cross-sections and spectra of particles emitted in them on iron-group nuclei, 14:37618 (RA;XA)
Approximation of precompound effects in Hauser-Feshbach codes for calculating double differential (n, xn) cross sections, 14:37637 (J;US)
Investigation of the angular distribution of secondary energy dependent inelastic neutron cross sections in structural materials using Blann's geometry dependent hybrid model, 14:37619 (RA;XA)
MSC calculations with use of EMPIRE, 14:37617 (RA;XA)
Neutron optical model potential, 14:37615 (RA;XA)

Optical-model calculations for experimental interpretation and evaluation: Practical considerations and fundamental implications, 14:37614 (RA;XA)
Some fundamental aspects of the optical potential for the interaction of fast neutrons with cobalt, 14:37613 (RA;XA)

NEUTRON SLOWING-DOWN THEORY
Approximation of the slowing-down equation solution by the discontinuous finite element method, 14:36073 (RA;SU;In Russian)

NEUTRON SOURCE FACILITIES
Neutron generator based on adiabatic trap, 14:37769 (RA;SU;In Russian)

NEUTRON SPECTROMETERS
Neutron spectrometry measurements with large volume cylindrical proton-recoil counters developed for use in radiological protection, 14:37099 (R;GB)

NEUTRON TRANSPORT
DEMETRA-ES program, 14:36080 (RA;SU;In Russian)

NEUTRON-DEFICIENT ISOTOPES
Shape transition in neutron deficient PT isotopes, 14:37592 (R;FR)

NEUTRONS
See also FAST NEUTRONS
FISSION NEUTRONS
THERMAL NEUTRONS
Density dependence of the momentum distribution in normal liquid ^{4}He, 14:37639 (R;US)
Development of neutron multiplicity counters for safeguards assay, 14:35790 (R;US)
Multi-energy neutron detector for counting thermal neutrons, high-energy neutrons, and gamma photons separately, 14:37133 (R;US)

NEVADA
A database for reviews and evaluations of high-level waste documents, 14:35820 (BA;US)

NEVADA TEST SITE
Comparison of spectral data gathered from a laboratory spectrometer and TM images with and without shadow correction, 14:37404 (R;US)

NEWFOUNDLAND
Woodchip production and transporation in Newfundland. Overview, 14:35866 (RA;CA)

NGL

NICKEL
Atom Transport
Solid-state interaction between nickel and $YBa_2Cu_3O_x$, 14:36646 (R;CA)
Binding Energy
Application of the embedded atom method to the fracture of interfaces, 14:36514 (BA;FR)
Cracks
Role of grain boundary structure on the electrochemical stability of passive films formed on high purity polycrystalline nickel, 14:36520 (BA;FR)
Deactivation
Deactivation of hydrotreatment catalysts used for coal liquids: Semi-annual report, 12 May 1988–11 November 1988, 14:35525 (R;US)
Deformation
Dynamic studies of deformation and fracture at grain boundaries, 14:36533 (BA;FR)
The response of single crystal and polycrystal nickel to quasistatic and shock deformation, 14:36573 (R;US)
Diffusion
Diffusion induced grain boundary migration in Ni(Zn) polycrystals, 14:36523 (BA;FR)
Grain boundary diffusion of Co and Ni in bicrystalline and polycrystalline NiO, 14:36633 (BA;FR)
Interdiffusion of Au/Ni/Cr on silicon substrate, 14:36529 (BA;FR)
TEM study of diffusion-induced grain boundary migration in Ni-Cu diffusion couples, 14:36530 (BA;FR)
Dislocations
Structure of small angle tilt boundaries and their behavior under the applied shear stresses in fcc metals, 14:36531 (BA;FR)
Dissolution
Impedance spectroscopy for the study of anodic copper dissolution in sulfuric acid in presence of benzotriazole, 14:36367 (BA;US)
Energy-Loss Spectroscopy
High resolution electron energy loss studies of surface vibrations: Progress report, July 1, 1988–June 20, 1989, 14:36481 (R;US)
Fractures
Dynamic studies of deformation and fracture at grain boundaries, 14:36533 (BA;FR)
Grain Boundaries
Common factors controlling grain and phase boundary energy, 14:36517 (BA;FR)
Experimental evidence of sulfur effect on the plane and on the extrinsic dislocations of a $\Sigma = 3$ grain boundary in nickel, 14:36504 (BA;FR)
Hydrogen segregation and diffusion at grain boundaries, 14:36501 (BA;FR)
Simulation study of interfaces in Ni, Al and Ni_3Al with and without boron, 14:36488 (BA;FR)
Unusual segregation behavior of boron and its effect on segregation of sulfur in nickel, 14:36508 (BA;FR)
Interfaces
Structure of Ni/MgO interfaces, 14:36489 (BA;FR)
Mechanical Properties
Special mechanical properties of very thin films, 14:36538 (BA;FR)
Microstructure
Segregation energies of phosphorus and sulfur in various relaxed structures of grain boundaries in Ni by tight-binding approximation, 14:36509 (BA;FR)
Phase Studies
Hetero phase boundaries in the silver-nickel system, 14:36515 (BA;FR)
Phase Transformations
Two dimensional phase equilibria at surfaces, 14:37671 (BA;FR)
Quantity Ratio
New ideas on interface structure from significant disagreements between experiments and prediction of interface composition in Ag base alloys, 14:36505 (BA;FR)
Recovery
Separation potential of solvent extraction in the recovery of metals, 14:35762 (BA;US)
Sample Preparation
The preparation of mechanically alloyed powders for TEM examination, 14:36596 (BA;US)
Segregation
Enhanced concentrations of Ni at grain boundary dislocations in Ni-treated W, 14:36511 (BA;FR)
Spatial Distribution
Electron microscopy studies of diffusion-induced grain boundary migration in ceramics, 14:36535 (BA;FR)
Surface Properties
Structural and surface characterization of dispersed metal catalysts: Final report, September 1, 1986–December 31, 1988, 14:36482 (R;US)
Surfaces
Unusual segregation behavior of boron and its effect on segregation of sulfur in nickel, 14:36508 (BA;FR)
Trace Amounts
Trace metal removal by iron coprecipitation: Field evaluation: Final report, 14:35960 (R;US)

NICKEL 60 TARGET
Analysis of threshold reaction cross-sections and spectra of particles emitted in them on iron-group nuclei, 14:37618 (RA;XA)

NICKEL ALLOYS
See also KOVAR
NICKEL BASE ALLOYS
Application of the embedded atom method to the fracture of interfaces, 14:36514 (BA;FR)

Breakdown mechanisms of Al_2O_3, Cr_2O_3 and SiO_2 scales in $H_2/H_2O/H_2S$ environments: Final report, Volume 1, 14:35538 (R;US)
Development of an engineering definition of the extent of J singularity controlled crack growth, 14:36579 (R;US)
Dynamic studies of deformation and fracture at grain boundaries, 14:36533 (BA;FR)
Electronic theory for grain boundary segregation and embrittlement of intermetallic compound Ni_3Al, 14:36518 (BA;FR)
Grain boundary chemistry contributions to intergranular hot cracking, 14:36513 (BA;FR)
Grain boundary internal friction and relationship to intergranular fracture, 14:36521 (BA;FR)
Grain boundary structure in Ni_3Al, 14:36492 (BA;FR)
Interfaces in composites reinforced with rapidly solidified metallic ribbons, 14:36495 (BA;FR)
Interfacial structure modifications induced by sulfur in Ag-Ni alloys, 14:36506 (BA;FR)
Microstructural refinement of W-Ni-Fe heavy alloys by alloying additions, 14:36462 (R;US)
Studies on work-softening processes in the hot forming of austenitic steel, 14:36581 (TJ;US)
Sulfidation/oxidation properties of iron-based alloys containing niobium and aluminum, 14:35539 (R;US)
The nature and composition of the passive film formed on Ni-P-Cr metallic glasses, 14:36366 (BA;US)

NICKEL BASE ALLOYS
See also MONEL 400
Effect of chromium on early stages of oxidation of Ni_3Al alloys at 600°C, 14:36608 (J;US)
[2nd international symposium on high-temperature corrosion of advanced materials and coatings, Les Embiez, France, May 22–26, 1989]: Foreign trip report, 14:35537 (R;US)

NICKEL OXIDES
Core structure of CSL boundaries in NiO, 14:36627 (BA;FR)
Electron microscopy studies of diffusion-induced grain boundary migration in ceramics, 14:36535 (BA;FR)
Equilibrium crystal shapes and surface phase diagrams at surfaces in ceramics, 14:36631 (BA;FR)
Grain boundary diffusion of Co and Ni in bicrystalline and polycrystalline NiO, 14:36633 (BA;FR)
Hetero- and homo-phase boundaries in ceramic oxides, 14:36626 (BA;FR)

NICKEL-CHROMIUM STEELS
Methods of calculation of weldpool surface form on the reverse side of plate under welding by impulse penetrative arc, 14:36560 (RA;SU;In Russian)

NICOTINE
Development of radioimmunological methods to determine the constituents of nicotiana plants and cell cultures, 14:37299 (R;DE;In German)

NUCLEAR POWER

The economics of nuclear power: further evidence on learning, economies of scale, and regulatory effects, 14:36064 (J;NL).

NUCLEAR POWER PLANTS

Buildings

Method for calculating plane reinforced concrete elements of walls and ceilings in power plant structures under limiting loads, 14:36088 (RA;SU;In Russian)

Construction

The economics of nuclear power: further evidence on learning, economies of scale, and regulatory effects, 14:36064 (J;NL)

Containment Buildings

Static load cycle testing of a low-aspect-ratio six-inch wall TRG-type structure TRG-4-6 (1.0, 0.25), 14:36091 (R;US)

Data Base Management

Organization of Risk Analysis Codes for Living Evaluations (ORACLE), 14:36053 (BA;DE)

Earthquakes

Overview of the development of seismic safety assessment techniques for nuclear power plants, 14:36169 (BA;DE)

Seismic margin screening insights for light water reactors, 14:36170 (BA;DE)

Emergency Plans

Developing a systematic approach to team training for emergency response personnel, 14:36135 (RA;US)

Failed Element Detection

On some methods of NPP functional diagnostics, 14:36102 (RA;SU;In Russian)

Structural redundance of NPPs and diagnostics, 14:36101 (RA;SU;In Russian)

Fasteners

Compilation of fastener testing data received in response to NRC Compliance Bulletin 87-02, 14:36051 (R;US)

Information Systems

Guidelines for quality records in electronic media for nuclear facilities (NCIG-10): Final report, 14:36047 (R;US)

Low Dose Irradiation

Occupational dose reduction at nuclear power plants: Annotated bibliography of selected readings in radiation protection and ALARA: Volume 4, 14:36159 (R;US)

Mechanical Structures

Determining the carrying capability of composite plates in power plant structures taking into account attenuating effect of joints in them, 14:36089 (RA;SU;In Russian)

Network Analysis

The plant expert system (PLEXSYS) development environment: System description and user's manual, version 2: Final report, 14:36007 (R;US)

Nuclear Materials Management

Closeout of IE Bulletin 83-06: Nonconforming materials supplied by Tube-Line Corporation Facilities at Long Island City, New York; Houston, Texas; and Carol Stream, Illinois, 14:35841 (R;US)

Occupational Safety

Fitness for duty in the nuclear power industry: Responses to public comments, 14:36052 (R;US)

Operation

Annual radiological environmental operating report, Sequoyah Nuclear Plant, 1988, 14:37230 (R;US)

Pipes

A review of recent developments in pipe damping allowable values for United States nuclear plants, 14:35990 (R;US)

Comparison of analysis and vibration test results for a multiple supported piping system, 14:36143 (R;US)

Primary Coolant Circuits

Reinforced confinement in a nuclear reactor, 14:36012 (TG;US)

Quality Assurance

Application of quality principles to training of QA audit personnel, 14:36059 (RA;US)

Performance based training for quality surveillance personnel, 14:36058 (RA;US)

Relating quality at work to quality at home, 14:35755 (RA;US)

Quality Control

ASQC support of the quality profession in the utility industry - is it sufficient?, 14:36060 (RA;US)

Radiation Protection

Data base on dose reduction research projects for nuclear power plants: Volume 3, 14:36160 (R;US)

Reactor Accidents

Aerosol sampling and Transport Efficiency Calculation (ASTEC) and application to surtsey/DCH aerosol sampling system: Code version 1.0: Code description and user's manual, 14:36163 (R;US)

Health effects models for nuclear power plant accident consequence analysis: Low LET radiation: Part 2, Scientific bases for health effects models, 14:37380 (R;US)

Reactor Components

Results of the initial phase of the INEL/USNRC large bore hydraulic snubber reliability evaluation program, 14:36144 (R;US)

Reactor Cooling Systems

Nuclear plant service water system aging degradation assessment: Phase 1, 14:36166 (R;US)

Reactor Instrumentation

Surveillance of instrumentation channels at nuclear power plants: Volume 2, An approach to classifying problems and solutions: Final report, 14:36095 (R;US)

Reactor Maintenance

Team maintenance as a result of team training, 14:36057 (RA;US)

Reactor Operation

Licensed operating reactors status summary report, data as of April 30, 1989, 14:35984 (R;US)

Meetings
UNITAR/UNDP, 4th international conference on heavy crude and tar sand. Vol. 1, 14:35702 (R;CA)
UNITAR/UNDP, 4th international conference on heavy crude and tar sands, vol. 2, 14:35689 (R;CA)
Permeability
Shear dilatency and permeability enhancement in oil sands, 14:35735 (RA;CA)
Plugging
Reservoir plugging/blocking using ultramicrobacteria: Three-dimensional physical simulator results, 14:35707 (RA;CA)
Regulations
New oil sands conservation regulations for Alberta, 14:35744 (RA;CA)
Research Programs
Tar sands program plan, FY 1989, 14:35692 (R;US)
Resource Management
Onshore federal reservoir management program and the relationship to heavy crude and tar sands in California, 14:35742 (RA;CA)
Soil Mechanics
UNITAR/UNDP, 4th international conference on heavy crude and tar sand. Vol. 1, 14:35702 (R;CA)
Steam Injection
UNITAR/UNDP, 4th international conference on heavy crude and tar sand. Vol. 1, 14:35702 (R;CA)
Well Casings
The development of Mod N-80HO casing for cyclical steam stimulation, 14:36470 (RA;CA)
X-Ray Radiography
Practical applications of X-radiography techniques in tar sands, 14:35732 (RA;CA)

OIL SHALE WASTE WATER
See OIL SHALES
WASTE WATER

OIL SHALES
See also BLACK SHALES
Lawrence Livermore National Laboratory oil shale quarterly report, January–March 1989, 14:35731 (R;US)
Modifications of existing testing facilities, optimization of hydroretorting conditions, and assessment of Canadian oil shales as source of synthetic fuels. Final report, 14:35730 (R;CA)
Onshore federal reservoir management program and the relationship to heavy crude and tar sands in California, 14:35742 (RA;CA)

OIL SPILL FINGERPRINTING
See OIL SPILLS

OIL SPILLS
Oil at shore and in deposits. Succesive report 1987, 14:35662 (R;NO;In Norwegian)

OIL WELLS
Analysis of thermal well pumping performance at the Norcen-Bodo steam pilot, 14:35624 (RA;CA)
Composite media prepacks for sand control in heavy oil production, 14:35621 (RA;CA)
Corrosion inhibition in sour media, 14:36469 (R;CA)
Influence of natural fractures on hydraulic fracture propagation, 14:35634 (B;US)
Optimum cementing and gravel packing methods for unconsolidated heavy oil sands, 14:35710 (RA;CA)
Production of ERW L80 for enhanced recovery wells, 14:36471 (RA;CA)
Sand control with geotextile filters, 14:35628 (RA;CA)
The role of combustion gases in recovering oil in in-situ combustion processes, 14:35629 (RA;CA)

OKLAHOMA
Post-Pennsylvanian reactivation along the Washita Valley fault, southern Oklahoma, 14:37411 (R;US)

OMEGA-1778 RESONANCES
See MESONS

ON-LINE CONTROL SYSTEMS
Experience in using the in-situ subsystem providing reactor operation in on-line control system of the Smolensk NPP, 14:36106 (RA;SU;In Russian)
Some mathematical aspects of creation of the control system for a physical installation. Analytical review, 14:37076 (R;SU;In Russian)

ON-LINE MEASUREMENT SYSTEMS
Advanced instrument development: a case study. Heavy water monitors: the second generation, 14:36026 (R;CA)
Measuring RF field distribution in the 4-chamber H-resonator using microcomputer, 14:37083 (RA;SU;In Russian)

ONCOGENIC VIRUSES
See also LEUKEMIA VIRUSES
HTLV-I, HIV, and human T cell growth, 14:37329 (RA;US)

ONTARIO
See also ELLIOT LAKE
A Citizen's guide to environmental assessment, 14:36270 (R;CA)
Acid rain and agricultural production in Ontario, 14:37218 (RA;CA)
Effects of climatic change on agricultural land resource potential, 14:37167 (RA;CA)
Gas supply. Reference from the Lieutenant Governor in Council, 14:35678 (R;CA)
General economic stimulation and energy indicators for capital investment initiatives in various transportation modes, 14:36229 (R;CA)

OOCYTES
Comparative radiosensitivity of oocytes of various stages of maturity, 14:37361 (RA;SU;In Russian)

OPEN PLASMA DEVICES
Plasma storage in the Yupiter-2M multislit electromagnetic trap, 14:37722 (RA;SU;In Russian)

OPERATING COST
Management Information Database System, 14:37822 (R;US)

OPERATION (REACTOR)
See REACTOR OPERATION

OPTICAL COMPUTERS
Thin-film optics for signal-processing applications. Final report, 1 September 1986-31 May 1988, 14:36999 (R;US)

OPTICAL EQUIPMENT
Thin-film optics for signal-processing applications. Final report, 1 September 1986-31 May 1988, 14:36999 (R;US)

OPTICAL FIBERS
Mechanical degradation of polymer coated glass optical fibres under γ irradiation, 14:37128 (R;GB)

ORGANIC ACIDS
See also CARBOXYLIC ACIDS
SULFONIC ACIDS
Prediction and control of extraction ability and some physicochemical properties of extractants (Solvent extraction of actinides and rare earths.), 14:36859 (RA;SU)

ORGANIC COMPOUNDS

A method of removing oxides from the surface of Fe-Ni-Co alloy particles by chemical etching, 14:36582 (R;US)
Composition and structure of the passive oxide film on iron as observed by second harmonic generation, 14:36650 (BA;US)
Properties of the new high T_c materials, 14:36654 (J;US)
Superconducting properties of magnetron sputtered high T_c thin films containing oxide compounds of yttrium, bismuth, or thallium, 14:36950 (J;US)
Understanding oxide-metal interfaces, 14:36620 (BA;FR)

OXOPROPANE
See ACETONE

OXYGEN
Charged particle activation analysis of light elements, 14:36721 (RA;JP;In Japanese)
Infrared study of carbon deposits on catalysts, 14:36736 (R;US)
Oxygen segregation in 32°[001] molybdenum tilt grain boundary. I. Segregation sites determination, 14:36502 (BA;FR)
Oxygen segregation in 32°[001] molybdenum tilt grain boundary. II. Enthalpies of segregation determination from AES and grain boundary grooves measurements, 14:36503 (BA;FR)

Results of fisheries investigations in Douglas tailwater, August 1987–September 1988, 14:35897 (R;US)

OXYGEN 16
Catalytic activity in reactions of isotopic exchange of carbon monoxide and adsorption properties of catalysts on zinc oxide base, 14:36815 (RA;SU;In Russian)

OXYGEN 16 BEAMS
Heavy ions reactions below 100 MeV per nucleon: two contributions to the study of subthreshold pion production, 14:37601 (R;FR;In French)

OXYGEN 16 REACTIONS
Multiple angular scattering of heavy ions $^{16-17}O$, ^{40}Ar, ^{86}Kr, ^{100}Mo at intermediate energies (20-90 MeV/u), 14:37682 (R;FR)

OXYGEN 16 TARGET
Measure of back angle cross sections of antiproton-nucleus elastic scattering at 48 and 180 MeV, 14:37577 (R;FR;In French)

OXYGEN 17 REACTIONS
Multiple angular scattering of heavy ions $^{16-17}O$, ^{40}Ar, ^{86}Kr, ^{100}Mo at intermediate energies (20-90 MeV/u), 14:37682 (R;FR)

OXYGEN 18
Catalytic activity in reactions of isotopic exchange of carbon monoxide and adsorption properties of catalysts on zinc oxide base, 14:36815 (RA;SU;In Russian)

OXYGEN 18 TARGET
Measure of back angle cross sections of antiproton-nucleus elastic scattering at 48 and 180 MeV, 14:37577 (R;FR;In French)

OXYGEN COMPOUNDS

FUEL OILS
GASOLINE
International petroleum statistics report, 14:35653 (R;US)
Petroleum supply annual 1988: Volume 1, 14:35651 (R;US)
Petroleum supply monthly, April 1989: Final 1988 statistics in summary section, 14:35650 (R;US)
Petroleum supply monthly, March 1989, 14:35649 (R;US)

PETROLEUM REFINERIES
Low severity co-processing using homogeneous basic nitrogen promotors, 14:35641 (J;US)
OSLO project update and upgrader technology selection, 14:35729 (RA;CA)
Petroleum supply annual 1988: Volume 1, 14:35651 (R;US)
Refinery yield model spreadsheet system (RYMSS) documentation, 14:35640 (R;US)
Syncrude processing in conventional refineries, 14:35704 (RA;CA)

PETROLEUM RESIDUES
A fundamental research program in coal/heavy oil coprocessing and heavy oil processing: Final report, 14:35523 (R;US)
Coal/oil coprocessing mechanism studies, 14:35546 (J;US)
Coking of oil sand, asphaltenes and residual oils in the LR-process, 14:35705 (RA;CA)
Low severity co-processing using homogeneous basic nitrogen promotors, 14:35641 (J;US)
Reaction mechanism in VisABC process, 14:35635 (RA;CA)

PETROLEUM STOCKS
See INVENTORIES

PH VALUE
High-temperature optical-fiber pH sensor: Final report, 14:36848 (R;US)

PHANTOMS
[Biospheric model validation in urban, terrestrial, and aquatic environments, Budapest, Hungary, Vienna, Austria, Neuherberg, and Schmallenberg, W. Germany, April 25–May 12, 1988]: Foreign trip report, 14:37661 (R;US)
PHENOLS
Explorations of mechanisms regulating ectomycorrhizal colonization of boron-fertilized pine: Quarterly report, April 1,1989–June 30, 1989, 14:35901 (R;US)
Micelle formation during extraction of alkali elements from strongly alkaline mediums (Alkali elements: Cs, Rb, K.), 14:36822 (RA;SU)
Thermal stability of jet fuel: Second quarterly report, January–March 1989, 14:35643 (R;US)
PHENYLETHYLENE
See STYRENE
PHOSPHINIC ACID ESTERS
Extraction of zinc(2), cadmium(2), copper(2) and iron(3) by cyanex 272, 14:36840 (RA;SU)
PHOSPHONIC ACID ESTERS
Studies of the influence of different anions on extraction of neodymium with di(1-methylheptyl)methyl phosphonate, 14:36826 (RA;SU)
PHOSPHORIC ACID
Separation potential of solvent extraction in the recovery of metals, 14:35762 (BA;US)
PHOSPHORIC ACID ESTERS
See also HDEHP
Regularities of the extraction of rare earth elements with triisoamyl phosphate, 14:36842 (RA;SU)
Some regularities of extraction of rare earth elements by organophosphoric acid, 14:36843 (RA;SU)
PHOSPHORUS
EBIC and DLTS measurements of SI- and polycrystalline silicon, 14:36673 (BA;FR)
Effect of manganese on intergranular fracture in low alloy steels, 14:36537 (BA;FR)
Grain boundary electrical activity of n-type germanium, 14:36532 (BA;FR)
Segregation energies of phosphorus and sulfur in various relaxed structures of grain boundaries in Ni by tight-binding approximation, 14:36509 (BA;FR)
PHOSPHORUS COMPOUNDS
See also PHOSPHORUS OXIDES
The nature and composition of the passive film formed on Ni-P-Cr metallic glasses, 14:36366 (BA;US)
PHOSPHORUS OXIDES
Laboratory testing of a fluidized-bed dry-scrubbing process for the removal of acidic gases from a simulated incinerator flue gas: Final report, 14:36416 (R;US)
PHOTOACOUSTIC SPECTROSCOPY
Background correction in photothermal deflection spectroscopy using a single position sensor, 14:36850 (BA;US)
PHOTOCHEMISTRY
Evaluating CFC [chlorofluorocarbon] alternatives from the atmospheric viewpoint: Revision 1, 14:37196 (R;US)
PHOTOIONIZATION
Multiphoton ionization of $(Xe)_n$ and $(NO)_n$ clusters using a picosecond laser, 14:37464 (R;US)
PHOTOMAGNETIC EFFECT
See VISIBLE RADIATION
PHOTOMAGNETOELECTRIC EFFECT
See MAGNETIC FIELDS
PHOTON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
PHOTONS
PHOTON-NUCLEON INTERACTIONS
Direct photon and π^0 production by deep inelastic scattering of real photons inclusive and exclusive studies, 14:37547 (R;FR;In French)
PHOTONS
Direct photon and π^0 production by deep inelastic scattering of real photons inclusive and exclusive studies, 14:37547 (R;FR;In French)
Three and five photon decays of the J/PSI (3097), 14:37553 (R;FR)
PHOTOPRODUCTION
Tests of QCD in photoproduction, 14:37543 (R;FR)
PHOTOSENSITIVITY
Electron impact fragmentation study of compounds from colour photosensible materials, 14:37469 (RA;RO;In Romanian)
PHOTOSPHERE
Temporal variations of solar-spectral-line profiles induced by the 5-minute photospheric oscillation, 14:37422 (R;US)
PHOTOVOLTAIC CONVERSION
Photovoltaics advanced research and development: 9th annual review meeting, 14:35908 (R;US)
PHOTOVOLTAIC POWER PLANTS
Research in photovoltaics, 14:36342 (RA;US)
Status of photovoltaics for commercial power generation, 14:36343 (RA;US)
PHYSICAL PROTECTION
The ASSESS Neutralization Analysis module, 14:35848 (R;US)
The assess facility descriptor module, 14:35847 (R;US)
PHYSICAL PROTECTION DEVICES
TRACE - Tamper Resistant Authenticated Camera Enclosure, 14:36890 (R;US)
PHYSICAL RADIATION EFFECTS
Post-irradiation fracture toughness characterization of four lab-melt plates: Revision 1, 14:36578 (R;US)
PHYSICS

Medium energy meson physics: [Progress report, 1981–1983], 14:37564 (R;US)
PION-NUCLEON INTERACTIONS
Three-body unitarity, the cloudy bag model, and the Roper resonance, 14:37537 (J;US)
PIONS
See also PIONS NEUTRAL
Medium energy meson physics: [Progress report, 1981–1983], 14:37564 (R;US)
PIONS NEUTRAL
Direct photon and π^0 production by deep inelastic scattering of real photons inclusive and exclusive studies, 14:37547 (R;FR;In French)

PIPE JOINTS
Investigation of a premium casing connection for Canadian thermal recovery wells, 14:35627 (RA;CA)

PIPE RESTRAINTS
See RESTRAINTS

PIPELINES
A guide to socio-economic impact monitoring in the Northwest Territories, 14:37283 (R;CA)
Applications by Phillips Petroleum Resources, Ltd. for permits to construct pipelines to transport sour gas and fuel gas in the salter field, 14:35683 (R;CA)
Calculational method for individual pipeline tracing in channel nuclear reactors, 14:36018 (RA;SU;In Russian)
Reasons for descisions-TransCanada Pipelines Ltd. Requests pertaining to the installation and to the approval of the method of devising rights and of the connected questions about rates, 14:35682 (R;CA;In French)
Threshold-stress determination using tapered specimens and cyclic stresses, 14:35685 (BA;US)

PIPES
See also DRILL PIPES
A review of recent developments in pipe damping allowable values for United States nuclear plants, 14:35990 (R;US)
Aging degradation of BWR feedwater and main steam lines, 14:35989 (R;US)
Comparison of analysis and vibration test results for a multiple supported piping system, 14:36143 (R;US)
Crack growth behavior and modeling: Topical report, 14:36466 (R;US)

PITTING CORROSION
The influence of surface capacitance on the measurements of localized corrosion transients, 14:36368 (BA;US)

PITTSBURGH ENERGY TECHNOLOGY CENTER
Evaluation of an on-line gas chromatographic system, 14:35545 (BA;US)

PLANKTON
Plankton studies at Sequoyah Nuclear Plant in 1988, 14:36111 (R;US)

PLANT GROWTH
[Workshop on global vegetation models, Laxenburg, Austria, 3 June–9 August 1988]: Foreign trip report, 14:37174 (R;US)

PLANTS
See also ALGAE
FUNGI
HERBS
SHRUBS
TREES
VEGETABLES
Absorption, distribution, and fate of neptunium in plants, 14:37233 (J;US)
Long-term recovery of northern hardwood forest following gamma irradiation, 14:37337 (J;US)
Priorities for the next decade of research in radiation ecology, 14:37385 (J;US)
The role of heterogeneity in structuring spatial hierarchies, 14:37212 (J;US)

PLANTS (INDUSTRIAL)
See INDUSTRIAL PLANTS

PLASMA
See also COLLISIONAL PLASMA
HIGH-BETA PLASMA
HOT PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
A heat-driven monochromatic light source, 14:37751 (J;US)
Atomic physics studies of highly charged ions on tokamaks using x-ray spectroscopy, 14:37738 (R;US)
Ionization equilibrium in dense plasmas, 14:37748 (D;US)
Magnetohydrodynamic clump instability, 14:37713 (R;US)
Two-dimensional effects in hollow core Z-pinches, 14:37743 (R;US)
Two-dimensional effects in imploding plasma liners, 14:37742 (R;US)

PLASMA ACCELERATION
Boundary treatment of the diffusion synthetic acceleration method for fixed-source discrete-ordinates problems in x-y geometry, 14:36081 (J;US)

PLASMA ACCELERATORS
See PLASMA GUNS

PLASMA CONFINEMENT
A computer model of the ZTH energy system at Los Alamos, 14:37749 (J;US)
Spatial structure of transient plasmas revealed with a CCD camera, 14:37746 (BA;US)

PLASMA DENSITY
The dynamics of charged particles in the near wake of a very negatively charged body, 14:37785 (J;US)

PLASMA DIAGNOSTICS
Large coil task instrumentation and diagnostics, 14:36929 (J;US)
On the ion temperature measurement by the CO_2-laser radiation scattering in tokamaks, 14:37726 (RA;SU;In Russian)
Probe measurements in the gas descharge plasma of a negative hydrogen ion source, 14:37768 (RA;SU;In Russian)
X-ray absorption spectroscopy of laser-produced plasmas: A study of the experiment and data analysis, 14:37752 (J;US)

PLASMA DIODES
See THERMIONIC DIODES

PLASMA DRIFT
Electron-density profiles and plasma-drift measurements with digital ionosondes. Technical report, July 1987-June 1988, 14:37452 (R;US)

PLASMA EXPANSION
Magnetic field-aligned plasma expansion in critical ionization velocity space experiments, 14:37459 (J;US)

PLASMA GUNS
Novel methods of acceleration. Final report, 30 September 1983-29 September 1988, 14:37067 (R;US)

PLASMA INSTABILITY
An overview of atomic and molecular processes in critical velocity ionization, 14:37750 (J;US)
Magnetohydrodynamic clump instability, 14:37713 (R;US)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA SHEATH
Dynamics of a collisional, capacitive RF sheath, 14:37753 (J;US)

PLASMA SIMULATION
Axisymmetric particle-in-cell simulations of diamagnetic-cavity formation in vacuum, 14:37784 (J;US)
Spacecraft charging potential during electron-beam injections into space plasmas, 14:37783 (J;US)

PLASMA SWITCHES
Calculational evaluation of plasma flow switches for the Los Alamos Foil Implosion Project, 14:37003 (R;US)
Interstage closure times for the rimfire multistage gas switch, 14:37773 (R;US)
Numerical analysis of experimental data to infer plasma opening switches, 14:37016 (R;US)
Numerical simulation of plasma opening switches, 14:37806 (R;US)
Performance of plasma opening switches for the Particle Beam Fusion Accelerator II (PBFA II), 14:37774 (R;US)
Plasma circuit breaker in a magnetic field as a high-power ion flux generator, 14:37767 (RA;SU;In Russian)
Plasma flow switch characterization for the Los Alamos Foil Implosion Project, 14:37012 (R;US)

PLASMA WAVES
An overview of atomic and molecular processes in critical velocity ionization, 14:37750 (J;US)
Caviton dynamics in strong Langmuir turbulence, 14:37457 (R;US)
Theoretical modeling of plasma waves in the magnetosphere. Final report, 1 October 1982-30 September 1988, 14:37451 (R;US)

PLASMOIDS
Parallel electric fields in a simulation of magnetotail reconnection and plasmoid evolution, 14:37455 (R;US)

PLASTICS
The effective utilization of differential scanning calorimetry (DSC) to assess molded parts, 14:36678 (R;US)
PLATINUM
Infrared study of carbon deposits on catalysts, 14:36736 (R;US)
PLATINUM ALLOYS
Optical properties of metals and alloys: Au, Ag, FeRh, $AuAl_2$, and $PtAl_2$, 14:36604 (D;US)
PLATINUM ISOTOPES
Shape transition in neutron deficient PT isotopes, 14:37592 (R;FR)
PLESIOTHERAPY
See RADIOTHERAPY
PLUGGING
Reservoir plugging/blocking using ultramicrobacteria: Three-dimensional physical simulator results, 14:35707 (RA;CA)
PLUNGER PUMPS
See ROD PUMPS
PLUTONIUM
Developments in the TEM examination of Pu and Pu alloys, 14:36598 (BA;US)
Electrorefining cell evaluation, 14:35758 (R;US)
Experimental facilities for pyrochemical development at the Savannah River Site, 14:35817 (R;US)
Implementation of isotope correlation technique for safeguards, 14:35836 (R;US)
Separation potential of solvent extraction in the recovery of metals, 14:35762 (BA;US)
[Analytical chemistry in nuclear technology, Karlsruhe, Germany and visit to Seibersdorf, Austria, June 3–22, 1989]: Foreign trip report, 14:35766 (R;US)
PLUTONIUM 239
Effect of change in diet on excretion of plutonium-239 from organism, 14:37365 (RA;SU;In Russian)
On the effect of iron on plutonium metabolic mechanism in liver tissue, 14:37363 (RA;SU;In Russian)
PLUTONIUM ALLOYS
Developments in the TEM examination of Pu and Pu alloys, 14:36598 (BA;US)
PLUTONIUM COMPLEXES
Extraction properties of TBP - uranyl nitrate disolvate, 14:36718 (RA;SU)
PLUTONIUM COMPOUNDS
See also PLUTONIUM OXIDES
On thorium and plutonium cocrystallization with calcium oxalate, 14:37356 (RA;SU;In Russian)
PLUTONIUM OXIDES
Compressive creep in nuclear oxides, 14:36614 (R;GB)
POINT BEACH-1 REACTOR
Expectations for training, 14:36002 (RA;US)
POINT BEACH-2 REACTOR
Expectations for training, 14:36002 (RA;US)
POINT MUTATIONS
See GENE MUTATIONS
POISEUILLE FLOW

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS
POLAND
Radon concentrations in air of Polish underground coal mines, 14:35597 (RA;CA)
POLAR-CAP AURORAE
Investigations of auroral dynamics: techniques and results, 14:37453 (R;SE)
Scientific results from the Swedish Viking satellite: A 1988 status report, 14:37454 (R;SE)
POLARIZED BEAMS
Program for calculating parameters of atomic beam of polarized particle source and jet polarized targets on 'Pravets-16', 14:37086 (R;SU;In Russian)
POLARIZED TARGETS
Program for calculating parameters of atomic beam of polarized particle source and jet polarized targets on 'Pravets-16', 14:37086 (R;SU;In Russian)
POLARONS
Formation, motion and high temperature superconductivity of large bipolarons, 14:37698 (R;US)
POLLUTION
See also AIR POLLUTION
LAND POLLUTION
WATER POLLUTION
Mitigation studies, 14:37246 (RA;NO)
POLLUTION REGULATIONS
Cost impact of potential RCRA (Resource Conservation Recovery Act) changes on New York State Utility coal-waste disposal. Final report, 14:35563 (R;US)
POLLUTION SOURCES
See also MOBILE POLLUTANT SOURCES
STATIONARY POLLUTANT SOURCES
An application of SPANS technology to toxic contaminant monitoring in the Atlantic region, 14:37219 (R;CA)
Trajectory analysis of nine years of precipitation chemistry in Charlottesville, Virginia: Final report, 14:37165 (R;US)
POLONIUM 210
^{210}Po incorporation to the structure of sulfurcontaining aminoacids, 14:37364 (RA;SU;In Russian)
Modeling of combined effect of alcohol, tobacco smokes and internal irradiation of laboratory animals, 14:37375 (RA;SU;In Russian)
POLY(ISOBUTYLENE OXIDE)
See ORGANIC POLYMERS
POLY(VINYLIDENE FLUORIDE)
See FLUORINATED ALIPHATIC HYDROCARBONS
POLYACRYLATES
Long-term degradation of dilute polyacrylamide solutions in turbulent pipe flow, 14:36422 (R;US)
POLYACRYLONITRILE
See ORGANIC POLYMERS
POLYAMIDES
Development of a membrane SO_x/NO_x treatment system: Final report, 28 April 1987–28 April 1988, 14:35957 (R;US)
POLYCARBONATES
Configurational diffusion of coal macromolecules: Quarterly progress report, March 16–June 15, 1989, 14:35556 (R;US)
POLYCRYSTALS
See also BICRYSTALS
Grain boundary design for desirable mechanical properties, 14:37674 (BA;FR)
POLYENES
Chemistry of bimetallic linked cyclopentadienyl complexes: Progress report, 1 December 1986–30 November 1989, 14:36738 (R;US)
POLYESTERS
Health-hazard evaluation determination report No. 75-178-295, New York Telephone and Telegraph Company, 770 Broadway, New York, New York, 14:37183 (R;US)
POLYETHERS
See POLYETHYLENE GLYCOLS
POLYETHYLENE GLYCOLS
Ionizable polyethers as specific metal ion carriers in liquid-liquid extraction and liquid membrane separations (Metals: Li-Cs, Ca, Sr, Ba.), 14:36834 (RA;SU)
New bis(grown ether)s as extraction agents, 14:36832 (RA;SU)
Prediction and control of extraction ability and some physicochemical properties of extractants (Solvent extraction of actinides and rare earths.), 14:36859 (RA;SU)
Size-selective extraction of metal salts: the general principles (Metals: alkali, alkaline earth, rare earth, transition elements, actinides.), 14:36831 (RA;SU)
Synergic extraction of metals with 4-acylpyrazol-5-ones and grown ethers, 14:36833 (RA;SU)
POLYETHYLENE OXIDES
See POLYETHYLENE GLYCOLS
POLYETHYLENE TERPHTHALATE
See POLYESTERS
POLYETHYLENES
A study of the use of crosslinked high-density polyethylene for low-level radioactive waste containers, 14:35794 (R;US)

POLYMERS
See also ORGANIC POLYMERS
Development of a thin wall graphite/polyimide composite pressure vessel with a large aspect ratio, 14:36884 (R;US)
Full-pattern refinement of crystalline polymer fibers based on diffractometer measurements, 14:36664 (R;US)
Methods for studying effects of high-energy irradiation on the mechanical and electric properties of polymers, 14:36655 (R;TR)
Scattering, deformation, and fracture in polymers, 14:36680 (B;US)

POLYNOMIALS
A MACSYMA package for the generation and manipulation of Chebyshev series, 14:37813 (R;US)

POLYPROPYLENE
Interfaces in composites reinforced with rapidly solidified metallic ribbons, 14:36495 (BA;FR)

POLYSULFIDES
See SULFIDES

POLYTETRAOXANE

SULFUR COMPOUNDS

POLYTHIONIC ACIDS
See OXYGEN COMPOUNDS
SULFUR COMPOUNDS

POOL CRITICAL ASSEMBLY ORNL
See ORNL-PCA REACTOR

POPULATION DYNAMICS
Species profiles: Life histories and environmental requirements of coastal fishes and invertebrates (Mid-Atlantic): Blue crab, 14:37249 (R;US)

PORTSMOUTH GASEOUS DIFFUSION PLANT
Long-range health and safety management plan, fiscal years 1989–1995, 14:35842 (R;US)

POSITRONS
Implementation of computer programmes for fitting of positron annihilation spectra on "personal computers". Final report for the period 1 May 1986 - 14 June 1988, 14:37468 (R;XA)

POSTULATED PARTICLES
See also HEAVY LEPTONS
HIGGS BOSONS
QUARKS
Search for resonant Bhabha scattering at MeV energies, 14:37507 (R;DE)

POTASSIUM ALLOYS
Comparative analysis of rubidium, cesium-potassium, sodium state diagrams using photometry, 14:36549 (RA;SU;In Russian)

POTASSIUM COMPLEXES
Optical reflectance studies of $C_{24}K$ and $C_{24}K(NH_3)$, 14:36696 (BA;US)

POTASSIUM COMPOUNDS
See also POTASSIUM IODIDES
POTASSIUM OXIDES
POTASSIUM SULFATES
Barium potassium bismuth oxide: Synthesis and physical properties, 14:36639 (R;US)

POTASSIUM IODIDES
Fusion phase diagram of the system BiI_3-KI, 14:36797 (RA;SU;In Russian)

POTASSIUM OXIDES
Evidence for phonon-mediated coupling in superconducting $Ba_{0.6}K_{0.4}BiO_3$, 14:36615 (R;US)
Hetero- and homo-phase boundaries in ceramic oxides, 14:36626 (BA;FR)

POTASSIUM SULFATES
Coal ash deposition, interaction with metal substrates and deposit build up: Summary report, 26 February 1989–25 May 1989, 14:35586 (R;US)

POWDERS
Grain size control in powder processed $Y_1Ba_2Cu_3O_x$, 14:36947 (J;US)
Modeling of non-structural contribution to the pattern, 14:37685 (R;US)
Preparation of zeolites for TEM using microtomy, 14:36688 (BA;US)
The preparation of mechanically alloyed powders for TEM examination, 14:36596 (BA;US)

POWER DISTRIBUTION SYSTEMS
A planning model for electrical power distribution grids, 14:35973 (R;CA;In French)

POWER POOLS

Cracking and rupture of a prestressed reinforced concrete high-pressure vessel, 14:36090 (RA;SU;In Russian)
International co-operation in the field of operational safety, 14:36130 (R;FR)
Systems with aftereffect in nuclear reactor dynamics, 14:36070 (RA;SU;In Russian)

POWER SUPPLIES
See also SPACECRAFT POWER SUPPLIES
DIII-D power supply fault system, 14:37761 (R;US)
Standard terminal panel and UPS [uninterruptible power supply] design for exterior intrusion detectors and data collection applications, 14:37018 (R;US)

POWER TRANSMISSION LINES
On the limitation of the weak-coupling assumption for crosstalk analysis in an inhomogeneous medium, 14:35975 (R;US)
Study of electric field and ion effects of HVDC [high voltage direct current] transmission lines: Characterization of the electrical environment beyond the corridor: Final report, 14:35969 (R;US)
TV interference study on distribution test line, 14:35974 (R;CA)

POWERED SUPPORTS
Improvement of work safety and strain reduction when equipping thin faces through the development and testing of a turning and swinging installation for shield support units. Final report, 14:35596 (R;DE;In German)

PRASEODYMIUM COMPLEXES
Determination of thermodynamic characteristics of extraction equilibria in the systems containing ammonium salts and organic phosphorus compounds (Solvent extraction of nitrates of Ce, Pr, Eu, UO_2^{2+}, Th.), 14:36717 (RA;SU)

PRASEODYMIUM SULFATES
Interaction of cesium, nickel and praseodymium (3) sulfates in aqueous solutions, 14:36780 (RA;SU;In Russian)

PRECIPITATIONS (ATMOSPHERIC)
See ATMOSPHERIC PRECIPITATIONS

PRESERVATIVES
A field evaluation of four wood pole groundline preservative formulations using western Canadian wood species, 14:36674 (R;CA)

PRESSURE VESSELS
A structural evaluation of the Shippingport reactor pressure vessel for transport impact conditions, 14:36014 (R;US)
Cracking and rupture of a prestressed reinforced concrete high-pressure vessel, 14:36090 (RA;SU;In Russian)
Development of a thin wall graphite/polyimide composite pressure vessel with a large aspect ratio, 14:36884 (R;US)
Mission survey for the Pressure Vessel Research User's Facility (PVRUF), 14:36011 (R;US)
Shippingport Station Decommissioning Project preparation of the reactor pressure vessel: Topical report, 14:35784 (R;US)
Strain to failure of pressurized thick wall cylinders, 14:36995 (R;US)

PRESSURIZED WATER COOLED MODERATED REACTOR
See PWR TYPE REACTORS

PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS

PRIMARY COOLANT CIRCUITS
Development of HPLC techniques for the analysis of trace-metal species in the primary coolant of a pressurized-water reactor, 14:36015 (D;GB)
Evaluation of SCC test methods for Inconel 600 in low-temperature aqueous solutions, 14:36175 (BA;US)
Reinforced confinement in a nuclear reactor, 14:36012 (TG;US)
Vibration monitoring of main coolant pumps: Guideline and reference data: Final report, 14:36096 (R;US)

PRINTED CIRCUITS
LineCAP [Line/Circuit Analysis Program]: Cross-coupling on PC [printed circuit] board traces including discontinuities and circuit elements, 14:37015 (R;US)

PROCESS CONTROL
Bristol Babcock DPC 3330 controller evaluation, 14:36417 (R;US)

PROCESS HEAT
Gas-based iron making: feasibility study. Final report, April 1985-December 1986, 14:36419 (R;US)

PROCESSING (DATA)

Smolt monitoring in the Columbia River Basin, 14:35883 (RA;US)

SALTS
Pressure-dependent melting curve of natural carnallite, $KMgCl_3.6H_2O$, in a closed system, where evaporation is prevented, 14:37416 (R;DK)

SAMARIUM 153
Samarium 153 chelate localization in malignant melanoma, 14:37348 (RA;AU)

SAMARIUM COMPOUNDS
See also SAMARIUM OXIDES
Fundamental magnetic studies of iron-rare-earth-metalloid alloys: Technical performance report, 14:36483 (R;US)

SAMARIUM OXIDES
Investigation of the lanthanide sesquioxides as high temperature transformation toughening agents, 14:36648 (B;US)

SAMPLERS
A large-sample extractor for determining organic contaminants in the Great Lakes, 14:37257 (R;CA)
Review of environmental monitoring equipment for air water and soil systems. Vol. 2-Environmental monitoring equipment database, 14:35966 (R;CA)

SANDSTONES
Fracture-height growth containment using low-permeability bridging agents to stimulate tight gas sands with weak barriers. Topical report, January 1982-March 1985, 14:35680 (R;US)
Site selection for GRI (Gas Research Institute) cooperative tight-gas field research. Volume 1: screening of candidate tight gas formations. Topical report, May-July 1988, 14:35672 (R;US)

SANITARY LANDFILLS
Drum centrifuge modelling of long-term pollutant migration through a soil layer, 14:37222 (R;GB)

SARA CYCLOTRON
AMPHORA detector, 14:37116 (R;FR)

SASKATCHEWAN
The Husky bi-provincial upgrader design basis, 14:35727 (RA;CA)
The newGrade upgrader, 14:35728 (RA;CA)

SASOL PROCESS
Assessment of the techno-economic potential of Fischer-Tropsch slurry reactors, 14:35543 (R;ZA)

SAVANNAH RIVER PLANT
Life extension approach to the reactor vessel of a nuclear production reactor: Revision 1, 14:36126 (R;US)

SCALAR FIELDS
Contribution of the kink-kink interaction to the free energy of a complex scalar nonlinear field, 14:37550 (RA;RO;In Romanian)
On a quantized scalar field in some Kantowski-Sachs' universes, 14:37444 (R;JP)

SCANDINAVIA
See also SWEDEN
Is the deposition of anthropogenic sulphate onto Scandinavia mature for a harrowing reconsideration ?, 14:37258 (RA;NO)

SCANDIUM
Low-temperature isotopic exchange in molecular hydrogen on films of transition and rare earth metals and their alloys with copper, 14:36813 (RA;SU;In Russian)
Nd:Cr:GSGG, will it replace Nd:YAG, 14:36971 (BA;US)

SCANDIUM ALLOYS
Low-temperature isotopic exchange in molecular hydrogen on films of transition and rare earth metals and their alloys with copper, 14:36813 (RA;SU;In Russian)

SCANDIUM COMPLEXES
Electron structure and electrostatic potential of some neutral organophosphorus extractants and their complexes, 14:36818 (RA;SU)
Mechanism of extraction 4th period of periodic system metal ions with carboxylic acids in sulphate systems, 14:36828 (RA;SU)
Role of the liquid-liquid partition coefficient of the extractable chelate in the extraction efficiency of metals with β-diketones (Metals: rare earths, scandium, yttrium.), 14:36819 (RA;SU)
Solvent extraction of scandium pigrate by crown ether and crystal structure of complex between picrate and benzo-15-crown-5, 14:36823 (RA;SU)

SCHOOL BUILDINGS
Evaluation of asbestos levels in two schools before and after asbestos removal. Final report, 14:37181 (R;US)

SCHOOL FACILITIES
See EDUCATIONAL FACILITIES

SCHOOL PLANT
See EDUCATIONAL FACILITIES

SCHOOLS
See EDUCATIONAL FACILITIES

SCOTLAND
See UNITED KINGDOM

SCREW DISLOCATIONS
Pair potential approach for interfaces: fundamental problems and practical solutions, 14:37666 (BA;FR)

SCREWS
See FASTENERS

SCRUBBERS
Submerged gravel scrubber demonstration as a passive air cleaner for containment venting and purging with sodium aerosols—CSTF tests AC7–AC10, 14:36028 (R;US)
Submerged gravel scrubber demonstration tests: Performance of a large-scale unit, 14:36029 (R;US)

SEA DISPOSAL
See MARINE DISPOSAL

SEABROOK-1 REACTOR
Managing the training function, 14:36003 (RA;US)
Technical Specifications, Seabrook Station, Unit 1 (Docket No. 50-443): Appendix "A" to License No. NPF-67, 14:36050 (R;US)

SEABROOK-2 REACTOR
Managing the training function, 14:36003 (RA;US)

SEACOAST
See SHORES

SEALED SOURCES
Theory and practice of sanitary inspection of radiological units, 14:37650 (RA;SU;In Russian)

SEALING MATERIALS
A preliminary pH analysis of coal slurries from the Sydney Coalfield, N.S., 14:35570 (R;CA)

SEALS
Unique applications of tamper indicating devices, 14:35840 (R;US)
SEASONAL THERMAL ENERGY STORAGE
A HVAC system based on seasonal heat storage, 14:36212 (RA;CA;In English and French)
An evaluation of solar heating systems with seasonal storage in New England. Systems using duct storage in rock and heat pump, 14:36198 (RA;CA;In English and French)
Analysis and theoretical design of central solar heating plant with seasonal storage in Poland, 14:35934 (RA;CA;In English and French)
Development of heat storage systems with vertical pipes in earth and rock, 14:36207 (RA;CA;In English and French)
Heat pump with a hard rock well equipped for thermal recharging, 14:35931 (RA;CA;In English and French)
Seasonal storage of heat for district heating in Sweden, 14:36206 (RA;CA;In English and French)
The borehole heat store at Lulea, Sweden, 14:36213 (RA;CA;In English and French)
Thermal energy storage in the energy ecosystem, 14:36215 (RA;CA;In English and French)
SECONDARY BATTERIES
See ELECTRIC BATTERIES
SECONDARY EMISSION
Experiments on secondary ion emission with multicharged keV ion bombardement, 14:37471 (R;FR)
SECONDARY RECOVERY
See ENHANCED RECOVERY
SEDIMENTARY BASINS
Formation and development of deposits in salt strata. Final report, 14:35598 (R;DE;In German)
SEDIMENTS
Ion exchange and soil attenuation of Gulf Coast and Great Plains soils: Final report, 14:37217 (R;US)
Mineralogical behavior of the phosphatic sedimentation in Pernambuco-Paraiba sedimentar coastal basin, 14:37209 (R;BR;In Portuguese)
Radiological survey of San Diego Bay, 14:37279 (R;US)
SEEDLINGS
High temperature flood injury of woody swamp seedlings, 14:35916 (J;US)
SEISMIC EFFECTS
Overview of the development of seismic safety assessment techniques for nuclear power plants, 14:36169 (BA;DE)
Seismic margin screening insights for light water reactors, 14:36170 (BA;DE)
Seismic risk of a BWR, 14:36171 (BA;DE)
SELENIUM
Ion exchange and soil attenuation of Gulf Coast and Great Plains soils: Final report, 14:37217 (R;US)
SELENIUM 77
Gamma-ray-laser pump diagnostic. Final report, 14:37582 (R;US)
SEMICLASSICAL APPROXIMATION
Semiclassical approach to particle resonances and dibaryons, 14:37522 (RA;RO;In Romanian)
SEMICONDUCTOR DEVICES
See also SEMICONDUCTOR DIODES
TRANSISTORS
Nondestructive testing for microelectronics, semiconductors, and superconductors. January 1970-April 1989 (Citations from the NTIS data base). Report for January 1970-April 1989, 14:36993 (R;US)
Tool integration and enhancement for standard cell designs, 14:37000 (R;US)
SEMICONDUCTOR DIODES
Photocurrent variability of discrete bipolar devices, 14:37017 (R;US)
SEMICONDUCTOR MATERIALS
Analysis of impurities in semiconductor by IMA (SIMS), 14:36723 (RA;JP;In Japanese)
Charged particle activation analysis of light elements, 14:36721 (RA;JP;In Japanese)
Fermi level stabilization in semiconductors, 14:36698 (BA;US)
Preparation of semiconductor cross sections by cleaving, 14:36686 (BA;US)
Techniques for utilization of nuclear reactor neutrons for semiconductor research. Current situation and problems to be solved in future, 14:36724 (RA;JP;In Japanese)
SENSIBLE HEAT STORAGE
Ground heat technology in Sweden, 14:36200 (RA;CA;In English and French)
SEPARATION EQUIPMENT
See also INERTIAL SEPARATORS
Capillary zone electrophoresis-mass spectrometry of peptides and proteins, 14:37141 (R;US)
SEQUOYAH NUCLEAR POWER PLANT UNIT-1
See SEQUOYAH-1 REACTOR
SEQUOYAH NUCLEAR POWER PLANT UNIT-2

SHIPPINGPORT REACTOR
A structural evaluation of the Shippingport reactor pressure vessel for transport impact conditions, 14:36014 (R;US)
Shippingport Station Decommissioning Project preparation of the reactor pressure vessel: Topical report, 14:35784 (R;US)
SHORES
Oil at shore and in deposits. Succesive report 1987, 14:35662 (R;NO;In Norwegian)
SHORT CIRCUITS
See ELECTRICAL FAULTS

SHOWER COUNTERS
An Outstanding Junior Investigator Award in experimental high energy physics: Progress report, January 1, 1989 to December 31, 1989, 14:37102 (R;US)
An alignment method for the Mark II silicon strip vertex detector using an x-ray beam, 14:37096 (R;US)
Data acquisition at D0, 14:37105 (R;US)
Progress report of a research program in experimental high energy physics, January 1, 1989–December 31, 1989, 14:37500 (R;US)
Silicon PIN diode hybrid arrays for charged particle detection: Building blocks for vertex detectors at the SSC, 14:37119 (R;US)

SHRUBS
Ecophysiology and adaptation in desert shrubs: Final report, 14:37206 (R;US)

SHUTDOWN (REACTOR)
See REACTOR SHUTDOWN

SI SEMICONDUCTOR DETECTORS
Development of new type of silicon detector with internal amplification, 14:37117 (R;DE;In German)

SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES

SIGMA MODEL
Stable static solitons in the nonlinear sigma model with a topological term, 14:37558 (J;NL)

SIGMA-410 RESONANCES
See SIGMA MODEL

SIGNAL CONDITIONING
Thin-film optics for signal-processing applications. Final report, 1 September 1986-31 May 1988, 14:36999 (R;US)

SILICA
Breakdown mechanisms of Al_2O_3, Cr_2O_3 and SiO_2 scales in $H_2/H_2O/H_2S$ environments: Final report, Volume 1, 14:35538 (R;US)
Study of long range forces in epitaxy systems: the Ag/Si interface, 14:36621 (BA;FR)

SILICEOUS ROCK
See SANDSTONES

SILICON
Activation Analysis
Qualitative and quantitative investigation of trace impurities (about 30 elements) in Si by neutron activation analysis, 14:36722 (RA;JP;In Japanese)
Activation Energy
Migration of differently oriented grain boundaries measured on Fe-3wt%Si 37° (001) bicrystals, 14:36522 (BA;FR)
Computerized Simulation
Fragmentation and structure of silicon microclusters, 14:37691 (BA;US)
Crystal Lattices
Breathing mode lattice relaxation associated with carrier emission and capture by deep electronic levels in silicon, 14:36689 (BA;US)
Lattice relaxation of the DX centers in $Ga_{1-x}Al_xAs$ and of the pressure-induced deep donors in GaAs, 14:36699 (BA;US)
Crystal Structure
Study of long range forces in epitaxy systems: the Ag/Si interface, 14:36621 (BA;FR)
Crystal-Phase Transformations
Hexagonal silicon, 14:36691 (BA;US)
Deep Level Transient Spectroscopy
Pressure-dependent DLTS experiments on Si-doped AlGaAs, 14:36700 (BA;US)
Dislocations
Depth-dependent character of extended defects in ion-implanted and RTA'd Si, 14:36690 (BA;US)
Electric Conductivity
EBIC and DLTS measurements of SI- and polycrystalline silicon, 14:36673 (BA;FR)
Structure and local electrical properties of grain boundaries in polycrystalline semiconductors, 14:36672 (BA;FR)
Grain Boundaries
Grain boundaries in silicon from zero temperature through melting, 14:36476 (R;US)
Grain-boundary dislocations structure and movement in Σ=9 studied by HREM, 14:36496 (BA;FR)
Structure and local electrical properties of grain boundaries in polycrystalline semiconductors, 14:36672 (BA;FR)
Interactions
Interactions of implanted carbon with oxygen and nitrogen in silicon, 14:36692 (BA;US)
Mechanical Properties
Critical phenomenon and segregation behavior at interfaces and subgrain boundaries, 14:36540 (BA;FR)
Oxidation
Effects of carbon concentration upon oxygen precipitation in Cz Si, 14:36694 (BA;US)
Phase Studies
Study of long range forces in epitaxy systems: the Ag/Si interface, 14:36621 (BA;FR)
Phase Transformations
Two dimensional phase equilibria at surfaces, 14:37671 (BA;FR)
Physical Radiation Effects
Proton backscattering in bulk silicon at large angles of incidence. Final report, 14:36657 (R;US)
Radiation damages in silicon induced by highly energetic electrons and protons, 14:36676 (R;DE;In German)
Sample Preparation
In situ high-temperature cross-sectional TEM specimen preparation, 14:36651 (BA;US)

SILICON 28 TARGET
Isovector and isoscalar spin-flip excitations in even-even s-d shell nuclei excited by inelastic proton scattering, 14:37630 (R;FR)

SILICON CARBIDES
Characterization of fiber-reinforced particulate filters, 14:35961 (R;US)
Interfacial characteristics of glass-ceramic matrix/SiC fiber composites, 14:36634 (BA;FR)
Mechanical behaviors of SiC whisker reinforced Al composites by powder metallurgical process, 14:36528 (BA;FR)
Phase transformation in boron doped SiC: HREM study of a twin interface, 14:36630 (BA;FR)
SiC-$MoSi_2$ composites, 14:36638 (R;US)

SILICON COMPOUNDS
See also SILICON CARBIDES
SILICON NITRIDES
SILICON OXIDES
The structure of the boron-hydrogen complex in silicon, 14:36695 (BA;US)

SILICON NITRIDES
Atomic structure of vitreous interfacial films in sialon, 14:36671 (BA;FR)
Diffusion reactions between silicon oxynitride and silicon nitride during HIP-synthesis, 14:36625 (BA;FR)
Interfacial characteristics of glass-ceramic matrix/SiC fiber composites, 14:36634 (BA;FR)
Noncontacting laser diffraction strain extensometer for material properties characterization at high temperatures, 14:36617 (R;US)

SILICON OXIDES
See also SILICA
Atomic structure of vitreous interfacial films in sialon, 14:36671 (BA;FR)
Interfacial characteristics of glass-ceramic matrix/SiC fiber composites, 14:36634 (BA;FR)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Research on stable, high-efficiency, large-area, amorphous-silicon-based submodules, Task B: Semiannual subcontract report, 16 March 1988–15 September 1988, 14:35914 (R;US)

SILOXANES
Development of a membrane SO_x/NO_x treatment system: Final report, 28 April 1987–28 April 1988, 14:35957 (R;US)

SILVER
Common factors controlling grain and phase boundary energy, 14:36517 (BA;FR)
Hetero phase boundaries in the silver-nickel system, 14:36515 (BA;FR)
Ion-assisted deposition of silver films on ceramics for friction and wear control, 14:36478 (R;US)
New ideas on interface structure from significant disagreements between experiments and prediction of interface composition in Ag base alloys, 14:36505 (BA;FR)
Optical properties of metals and alloys: Au, Ag, FeRh, $AuAl_2$, and $PtAl_2$, 14:36604 (D;US)
Structure of Ag, Fe and Ge microclusters, 14:37477 (J;DE)
Study of long range forces in epitaxy systems: the Ag/Si interface, 14:36621 (BA;FR)

SILVER ALLOYS
Interfacial structure modifications induced by sulfur in Ag-Ni alloys, 14:36506 (BA;FR)
Subcritical crack growth in metal-ceramic-interfaces, 14:36986 (BA;FR)

SILVER PHOSPHATES
Properties of mixed polyphosphates of silver and rare alkali metals (Alkali metals: Li, Rb, Cs.), 14:36754 (RA;SU;In Russian)

SIMS

Final Environmental Impact Statement. Qaste reduction, recycling, and disposal alternatives. Recycling potential assessment and waste stream forecast. Volume 2, 14:36434 (R;US)

SOLIDS
DYNA3D user's manual: (Nonlinear dynamic analysis of structures in three dimensions): Revision 5, 14:36893 (R;US)
Spatial structure of transient plasmas revealed with a CCD camera, 14:37746 (BA;US)

SOLIDS FLOW
Advanced instrumentation for local measurement of gas-solid suspension flows: Quarterly technical progress report No. 9/10, November 1, 1988–April 30, 1989, 14:35577 (R;US)

SOLVENT EXTRACTION
International solvent extraction conference. Vol. 1. Conference papers, 14:36715 (R;SU;In Russian)
Modeling of flow fields in oscillating droplets, 14:36983 (BA;US)
Recent advances in centrifugal contactor design, 14:35822 (J;US)

SOOT
Enhanced flame stability and soot radiation using electric fields. Annual report, July 1987-July 1988, 14:35687 (R;US)
Suppression of soot in flames by alkaline-earth and other metal additives, 14:36866 (R;US)

SORPTION
Technology assessment guide for application of engineered sorbent barriers to low-level radioactive waste disposal sites, 14:35802 (R;US)

SORTING
A virtual zero-time, monolithic systolic sorting array, 14:37798 (R;US)

SOURCE TERMS
Use of source term code package in the ELEBRA MX-850 system, 14:36132 (R;BR;In Portuguese)

SOUTH AFRICA
Impact upon US security of a South African nuclear-weapons capability. Final technical report, 14:36458 (R;US)
Potential of electric heat pumps for heating water in South Africa, 14:36391 (R;ZA)
Statistics on smoke and sulfur dioxide pollution in South Africa. Special report, 14:37187 (R;ZA)

SOUTH TEXAS PROJECT-1 REACTOR
Systematic problem solving process (SPSP) - root cause analysis that works, 14:36137 (RA;US)

SOUTH TEXAS PROJECT-2 REACTOR
Systematic problem solving process (SPSP) - root cause analysis that works, 14:36137 (RA;US)

SPACE
See also INTERSTELLAR SPACE
Stability of laser beams in a structured environment, 14:36975 (BA;US)

SPACE CHARGE
Magnetic field-aligned plasma expansion in critical ionization velocity space experiments, 14:37459 (J;US)

SPACE FLIGHT
Risk assessment and late effects of radiation in low-earth orbits, 14:37343 (R;US)
SPACE HEATING
Conversion of detached houses with direct electric heating to district heating, 14:36374 (R;SE;In Swedish)
Optimization of a combined heat pump/storage system with solar or convective heat collectors, 14:36382 (RA;CA;In English and French)
SPACE PROPULSION REACTORS
Small propulsion reactor design based on particle bed reactor concept, 14:36128 (R;US)
SPACE REFLECTION
See P INVARIANCE
SPACE-TIME
Compactifications of the eleven-dimensional supermembrane, 14:37700 (R;XA)
SPACECRAFT POWER SUPPLIES
Safety testing program for the Galileo mission radioisotope thermoelectric generator, 14:36158 (R;US)
SPECIAL RELATIVITY THEORY
See RELATIVITY THEORY
SPECIFIC GRAVITY
See DENSITY
SPECIFIC VOLUME
See DENSITY
SPECIFIC WEIGHT
See DENSITY
SPECTRAL SHIFT
Shape transition in neutron deficient PT isotopes, 14:37592 (R;FR)
SPECTROMETERS
See also ELECTRON SPECTROMETERS
FOURIER TRANSFORM SPECTROMETERS
GAMMA SPECTROMETERS
MASS SPECTROMETERS
NEUTRON SPECTROMETERS
A superconducting dipole concept for the CEBAF high resolution spectrometers, 14:36943 (J;US)
A superconducting iron-dominated quadrupole for CEBAF, 14:36939 (J;US)
Plastic Ball experiments, 14:37110 (R;DE)
Technical advisory panel for the large acceptance spectrometer: Final report, 14:37108 (R;US)
Workshop on CEBAF [Continuous Electron Beam Accelerator Facility] spectrometer magnet design and technology: Proceedings, 14:37107 (R;US)
SPENT FUEL CASKS
Cask drop testing and analysis, 14:36869 (R;US)
GACAP: A new computer code for analysis of symmetric and nonsymmetric cask cross sections, 14:36871 (R;US)
Investigation of cask contamination weeping: A progress report, 14:36888 (R;US)
TRUPACT I filter development: Status report, 14:36883 (R;US)
The analysis of lead slump effects in shipping casks for radioactive materials, 14:36894 (R;US)
SPENT FUEL STORAGE
See also MONITORED RETRIEVABLE STORAGE
Design considerations for on-site spent-fuel transfer systems: Final report, 14:35767 (R;US)
SPENT FUELS
An evaluation of near-field host rock temperatures for a spent fuel repository, 14:35805 (R;US)
Simulation of a continuous rotary dissolver, 14:35763 (R;US)
Treatment needs for Greater-Than-Class C low-level waste, 14:35804 (R;US)
SPIN
Low-spin states in ^{122}Cs, 14:37589 (R;FR)
Spin value of ^{184}Ir ground state, 14:37627 (R;FR)
SPIN GLASS STATE
Dynamical properties in metallic reentrant in spin glasses studied by inelastic neutron scattering, 14:36546 (R;FR;In French)
SPIN-OFF
See TECHNOLOGY TRANSFER
SPIN-SPIN RELAXATION
Nuclear relaxation rates at copper and oxygen sites in $YBa_2Cu_3O_7$, 14:36640 (R;US)
SPONTANEOUS MUTATIONS
Mobile DNA elements and spontaneous gene mutation, 14:37305 (RA;US)
Mobile genetic elements, spontaneous mutations, and the assessment of genetic radiation hazards in man, 14:37342 (RA;US)
SPRAY DRYING
10-MW spray dryer/ESP pilot plant test program: High-sulfur coal test phase (phase 3): Final report, 14:35962 (R;US)
SPRAY PONDS
See SPRAYS
SPRAYS
Secondary atomization of coal-water fuels for gas turbine applications: Final report, 14:35581 (R;US)
SQUID DEVICES
Hot electron effect in the dc SQUID, 14:36903 (J;US)
Nuclear magnetic resonance with dc SQUID preamplifiers, 14:36905 (J;US)
STABILITY
A synopsis of analyses (1981–87) performed to assess the stability of underground excavations at Yucca Mountain: Yucca Mountain Project, 14:35808 (R;US)
STAINLESS STEEL-18-4-1
See STAINLESS STEELS
STAINLESS STEEL-19-9DL
See STAINLESS STEELS
STAINLESS STEEL-304
Coal ash deposition, interaction with metal substrates and deposit build up: Summary report, 26 February 1989–25 May 1989, 14:35586 (R;US)
Creep-fatigue assessment methods using elastic analysis results and adjustments, 14:36588 (R;US)
Effect of temperature and ionic impurities at very low concentrations on stress corrosion cracking of sensitized type 304 stainless steel, 14:36594 (BA;US)
Evaluating the intergranular SCC resistance of sensitized Type 304 stainless steel in low-temperature water environments, 14:36601 (BA;US)
Life extension approach to the reactor vessel of a nuclear production reactor: Revision 1, 14:36126 (R;US)
The Sigmajig: An improved hot-cracking test, 14:36479 (R;US)
STAINLESS STEEL-310
Heat exchanger development for steam-injected Brayton cycle: Final report for period September 30, 1984 to April 30, 1988, 14:36577 (R;US)
STAINLESS STEEL-316
Stress corrosion cracking susceptibility of types 316NG and 316 stainless steel in BWR-type environments, 14:36593 (BA;US)
The Sigmajig: An improved hot-cracking test, 14:36479 (R;US)
STAINLESS STEELS
See also CHROMIUM STEELS
An experimental study of the effect of stainless steel cladding on the structural integrity of flawed steel plates in bending, 14:36082 (R;US)
STANDARD MODEL
Ground state of high-density matter, 14:37541 (J;NL)
What is special about the group of the standard model?, 14:37528 (R;DK)
STANDING CROP
See BIOMASS
STANFORD LINEAR COLLIDER
Applications of a plasma lens with bootstrap disruption, 14:37065 (R;US)
PHASEFIX: Correcting the tunes of the SLC Arcs, 14:37066 (R;US)
RF phase distribution systems at the SLC, 14:37094 (R;US)
Recent commissioning experience on the SLC Arcs, 14:37095 (R;US)
Retractable carbon fibre targets for measuring beam profiles at the SLC collision point, 14:37126 (J;NL)

STARCH GUM
See DEXTRIN
STARFISH EVENT
Some aspects of Starfish, 14:37154 (R;US)
Study of coupling in Starfish, 14:37155 (R;US)
STATIONARY POLLUTANT SOURCES
Atmospheric modeling of air pollution. September 1984-March 1988 (Citations from the NTIS data base). Report for September 1984-March 1988, 14:37194 (R;US)
STATISTICAL MECHANICS
4. International symposium on selected topics in statistical mechanics, 14:37702 (R;SU;In Russian)
STATISTICS
ORMONTE: An uncertainty analysis code for use with user-developed systems models on mainframe or personal computers: A user's guide, 14:37808 (R;US)
STEADY-STATE D-T REACTORS
To the problem of thermal stability of a stellarator reactor, 14:37764 (RA;SU;In Russian)
STEAM GENERATORS
A finite-element model for eddy-current nondestructive evaluation: Final report, 14:36086 (R;US)
Evaluation of SCC test methods for Inconel 600 in low-temperature aqueous solutions, 14:36175 (BA;US)
STEAM INJECTION
A theoretical and experimental study of steam-assisted gravity drainage process, 14:35709 (RA;CA)
Analysis and implementation of the steam assisted gravity drainage process at the AOSTRA UTF, 14:35708 (RA;CA)
Aspects of alloy selection in thermal recovery of heavy crudes and tar sands, 14:36467 (RA;CA)
Heavy oil recovery through immiscible displacement by carbon dioxide, 14:35604 (RA;CA)
In situ oil sands temperature logging, 14:35725 (RA;CA)
Laboratory examinations of a new downhole steam generator, 14:35605 (RA;CA)
New technologies in termalrecovery contribution of horizontal wells, 14:35611 (RA;CA)
Oil sands formation preheating study, 14:35714 (RA;CA)
Optimization of heavy oil thermorecovery made possible with a novel in-situ process, 14:35715 (RA;CA)
Reducing wellbore heat loss, 14:35623 (RA;CA)
Simulation of HASDrive UTF pilot, 14:35693 (RA;CA)
Steam-CO_2 injection to recover heavy oil in limestones, 14:35608 (RA;CA)
STEAM SOAK PROCESSES
Design and evaluation of pilot tests of steam soak with additives in Venezuela heavy oil reservoirs, 14:35607 (RA;CA)

The PVF2 piezoelectric polymer shock stress sensor: System characterization for application under field test conditions, 14:36891 (R;US)

STRETFORD PROCESS
Stretford chemistry and analytical methods handbook. Topical report, 14:35675 (R;US)

STRING MODELS
Couplings in the heterotic superconformal three generation model, 14:37529 (R;DK)
Non renormalization theorem in bosonized n-string formalism, 14:37555 (R;DK)
Using reparametrization invariance to define vacuum infinities in string path integrals, 14:37559 (J;NL)

STRONTIUM
Sorption of radionuclides on London clay, 14:37224 (R;GB)

STRONTIUM 90
Combined effect of incorporated ^{90}Sr, alcohol, and tobacco smokes on reproduction of warm-blooded animals, 14:37372 (RA;SU;In Russian)
Dependence of animal life span shortening on dose rates in case of internal irradiation, 14:37369 (RA;SU;In Russian)
Modeling of combined effect of alcohol, tobacco smokes and internal irradiation of laboratory animals, 14:37375 (RA;SU;In Russian)
Morphological content of rat peripheral blood in combined effect of radiation factors, 14:37371 (RA;SU;In Russian)

STRONTIUM CHLORIDES
Physico-chemical study of extraction systems by the method of solubility diagrams (Solvent extraction and phase diagrams of strontium compounds.), 14:36830 (RA;SU)

STRONTIUM COMPLEXES
Mechanism of nitric acid and strontium extraction with zirconium di-2-ethylhexyl phosphate complexes-studying by the ^{14}N and ^{31}P NMR methods, 14:36837 (RA;SU)
New bis(grown ether)s as extraction agents, 14:36832 (RA;SU)
Physico-chemical study of extraction systems by the method of solubility diagrams (Solvent extraction and phase diagrams of strontium compounds.), 14:36830 (RA;SU)

STRONTIUM COMPOUNDS
See also STRONTIUM CHLORIDES
STRONTIUM OXIDES
Synthesis and study of some properties of mixed hexacyanoferrates (3) of rare alkali and alkaline-earth elements, 14:36789 (RA;SU;In Russian)

STRONTIUM OXIDES
X-ray absorption spectroscopy investigations of high Tc superconductors, 14:36649 (BA;US)

Superconducting detector for minimum ionizing particles, 14:37123 (J;NL)
Superconductivity. Recent developments and defence applications (U), 14:36666 (R;CA)

SUPERCONDUCTING FILMS
A simple method for preparing superconducting high Tc thin films, 14:36956 (J;US)
Design of variable phase velocity kinetic inductance delay lines and their measured characteristics when fabricated by a simple Nb based process, 14:36904 (J;US)
Flux noise and flux creep in YBCO thin films, 14:36897 (J;US)
High-temperature superconductivity. Quarterly report No. 1 for period ending FY89, 14:36613 (R;US)
Hot electron effect in the dc SQUID, 14:36903 (J;US)
In situ growth of superconducting YBaCuO using reactive electron-beam coevaporation, 14:36955 (J;US)
Josephson effect research in high-temperature superconductors. Interim report, 30 September 1987-29 September 1988, 14:36609 (R;US)
Low frequency resistance fluctuations in films of high temperature superconductors, 14:36900 (J;US)
Rf properties of high-T_c superconductors, 14:36954 (J;US)
Single superconducting thin film devices for applications in high T_c materials circuits, 14:36898 (J;US)
Superconducting properties of magnetron sputtered high T_c thin films containing oxide compounds of yttrium, bismuth, or thallium, 14:36950 (J;US)

SUPERCONDUCTING JUNCTIONS
See also JOSEPHSON JUNCTIONS
Grain size control in powder processed $Y_1Ba_2Cu_3O_x$, 14:36947 (J;US)
Low contact-resistivity junctions to ceramic superconductors, 14:36945 (J;US)
Single superconducting thin film devices for applications in high T_c materials circuits, 14:36898 (J;US)

SUPERCONDUCTING MAGNETIC ENERGY STORAGE
A comparison of the conductor requirements for energy storage devices made with ideal coil geometries, 14:36928 (J;US)
Superconducting Magnetic Energy Storage, 14:36895 (J;US)
Thermal-hydraulic simulation of helium expulsion from a cable-in-conduit conductor, 14:36916 (J;US)

SUPERCONDUCTING MAGNETS
A superconducting dipole concept for the CEBAF high resolution spectrometers, 14:36943 (J;US)
A superconducting iron-dominated quadrupole for CEBAF, 14:36939 (J;US)
A superconducting toroidal magnet for the CEBAF large acceptance spectrometer, 14:36942 (J;US)
Advanced superconducting MHD magnet design for a retrofit power plant, 14:36918 (J;US)
An alternate method for designing dipole magnet ends, 14:36923 (J;US)
Ductility enhancement in unreacted internal-Sn Nb_3Sn through low-temperature anneals, 14:36948 (J;US)
Large coil task instrumentation and diagnostics, 14:36929 (J;US)
Magnet systems for the international thermonuclear experimental reactor, 14:36909 (J;US)
Magnetic field decay in model SSC dipoles, 14:36913 (J;US)
Measurement of internal forces in superconducting accelerator magnets with strain gauge transducers, 14:36911 (J;US)
Normal state resistance and low temperature magnetoresistance of superconducting cables for accelerator magnets, 14:36946 (J;US)
Studies of time dependence of fields in Tevatron superconducting dipole magnets, 14:36921 (J;US)
Superconducting super collider second generation dipole magnet cryostat design, 14:36922 (J;US)
Tests of full scale SSC R and D dipole magnets, 14:36912 (J;US)
Time variations of fields in superconducting magnets and their effects on accelerators, 14:36920 (J;US)

SUPERCONDUCTING QUANTUM INTERFERENCE DEVICES
See SQUID DEVICES

SUPERCONDUCTING SUPER COLLIDER
A conductor, with uncoupled 2.5 μm. diameter filaments, designed for the outer cable of SSC dipole magnets, 14:36938 (J;US)
An alternate method for designing dipole magnet ends, 14:36923 (J;US)
Beam-beam interaction and pacman effects in the SSC with random nonlinear multipoles, 14:37050 (R;US)
Current capacity degradation in superconducting cable strands, 14:36940 (J;US)
Measurement of internal forces in superconducting accelerator magnets with strain gauge transducers, 14:36911 (J;US)
Optimization of multiwire coil ends having 45 degree bends, 14:36924 (J;US)
SSC detector solenoid, 14:36925 (J;US)
Silicon PIN diode hybrid arrays for charged particle detection: Building blocks for vertex detectors at the SSC, 14:37119 (R;US)
Siting the superconducting super collider, 14:37033 (R;US)
Status of the SSC superconducting magnet program, 14:36910 (J;US)
Superconducting super collider second generation dipole magnet cryostat design, 14:36922 (J;US)
Test results from recent 1.8-M SSC model dipoles, 14:36908 (J;US)
Tests of full scale SSC R and D dipole magnets, 14:36912 (J;US)
Training in test samples of superconducting cables for accelerator magnets, 14:36933 (J;US)

SUPERCONDUCTING WIRES
A conductor, with uncoupled 2.5 μm. diameter filaments, designed for the outer cable of SSC dipole magnets, 14:36938 (J;US)
Ductility enhancement in unreacted internal-Sn Nb_3Sn through low-temperature anneals, 14:36948 (J;US)
Intermediate scale industrially processed Nb_3Sn(Ti) by powder metallurgy, 14:36941 (J;US)
Reaction kinetics of phase formation in Nb-Al powder metallurgy processed wire, 14:36944 (J;US)
Structural characteristics of proposed ITER TF coil conductor, 14:36930 (J;US)
The critical density throughout the superconducting phase of multifilamentary Nb_3Sn wire for forced flow fusion applications measured using the Bean-Campbell AC magnetization technique, 14:36951 (J;US)

SUPERCONDUCTIVITY
Bi-Ca-Sr-Cu-O superconductors, 14:36953 (J;US)
Evidence for phonon-mediated coupling in superconducting $Ba_{0.6}K_{0.4}BiO_3$, 14:36615 (R;US)
General formulas for the adiabatic propagation velocity of the normal zone, 14:36926 (J;US)
Superconducting properties of magnetron sputtered high T_c thin films containing oxide compounds of yttrium, bismuth, or thallium, 14:36950 (J;US)

SUPERCONDUCTORS
See also TYPE-II SUPERCONDUCTORS
A film transmission line resonator to measure the microwave surface resistance of $YBa_2Cu_3O_{7-x}$, 14:36901 (J;US)
Bi-Ca-Sr-Cu-O superconductors, 14:36953 (J;US)
Consolidation of powders of the oxide superconductor YBa_2Cu_3Ox by high energy-high rate processing, 14:36611 (R;US)
Impact of high temperature superconductors on the possibility of radio-frequency confinement, 14:36914 (J;US)
Ion beam modification and analysis of thin $YBa_2Cu_3O_7$ films, 14:36677 (R;DE)
Nondestructive testing for microelectronics, semiconductors, and superconductors. January 1970-April 1989 (Citations from the NTIS data base). Report for January 1970-April 1989, 14:36993 (R;US)
Preparation of semiconductor cross sections by cleaving, 14:36686 (BA;US)

Structural characteristics of proposed ITER TF coil conductor, 14:36930 (J;US)
Superconductivity, critical current density, and magnetic properties of Fe-substituted $Y_1Ba_2(Cu_{1-x}Fe_x)_3O_z$ materials, 14:36949 (J;US)
Superconductivity. Recent developments and defence applications (U), 14:36666 (R;CA)
The effect of self field on the critical current determination of multifilamentary superconductors, 14:36936 (J;US)

SUPERCRITICAL FLOW
See TURBULENT FLOW

SUPERCRITICAL FLUID CHROMATOGRAPHY
Reverse micelles in supercritical fluid chromatography, 14:35644 (BA;US)

SUPERFLUID MODEL
Enlarged superfluid model of atomic nucleus, 14:37609 (R;XA)

SUPERFUND
Implementation of an integrated CERCLA-NEPA environmental process at a FUSRAP site, 14:37226 (R;US)
Summary report of capacity at commercial facilities. Volume 1. Summary report, 14:36435 (R;US)
Summary report of capacity at limited commercial and company-captive facilities. Volume 2. Draft report, 14:36437 (R;US)
Summary report of capacity at limited commercial and company-captive facilities. Volume 1. Draft report, 14:36436 (R;US)

SUPERGRANULATION
See SOLAR GRANULATION

SUPERNOVA REMNANTS
IUE observations of oxygen-rich supernova remnants, 14:37430 (RA;FR)

SUPERNOVAE
Spectral evolution of SN 1987A in the IUE long wavelength range, 14:37429 (RA;FR)

SUPERSYMMETRY
Couplings in the heterotic superconformal three generation model, 14:37529 (R;DK)
Wormholes and the cosmological constant, 14:37711 (J;NL)

SUPERVOLTAGE RADIOTHERAPY

LAKES
STREAMS

Acidification
Acidification and water pathways. What about the future?, 14:37273 (RA;NO)
Acidification of infiltration waters as a result of the seepage through carboniferous host-rocks, 14:35566 (RA;NO)
Acidity of surface water in Norway, 14:37242 (RA;NO)
Alkalinity production in soil and rock: A useful concept for understanding acidification of soil and freshwater, 14:37259 (RA;NO)
Quality of surface water evolution during snowmelt. International symposium on acidification and water pathways, 14:37238 (RA;NO)
Use of representative field plots for the determination of hydrological flow-paths and associated hydrochemistry in studies of surface water acidification, 14:37261 (RA;NO)

Chemical Composition
Event studies and the interpretation of water quality in forested basin, 14:37245 (RA;NO)
Liming as a method to neutralize highly acidic drainage waters from sulphate basins in western Finland, 14:37247 (RA;NO)
Loch Fleet Project, 14:37244 (RA;NO)
Size distribution patterns for trace elements in waters draining a small catchment, S.E. Norway, 14:37263 (RA;NO)

Coal Mines
Acidification of infiltration waters as a result of the seepage through carboniferous host-rocks, 14:35566 (RA;NO)

Compiled Data
Quebec surface water data, 1987, 14:35873 (R;CA)

Ecology
Liming as a method to neutralize highly acidic drainage waters from sulphate basins in western Finland, 14:37247 (RA;NO)

Environmental Exposure Pathway
Alkalinity production in soil and rock: A useful concept for understanding acidification of soil and freshwater, 14:37259 (RA;NO)
Use of representative field plots for the determination of hydrological flow-paths and associated hydrochemistry in studies of surface water acidification, 14:37261 (RA;NO)

Forests
Event studies and the interpretation of water quality in forested basin, 14:37245 (RA;NO)
Hydrologic system characterisation for biogeochemical process research in forest ecosystems, 14:37236 (RA;NO)

Geochemistry
Hydrologic system characterisation for biogeochemical process research in forest ecosystems, 14:37236 (RA;NO)

Liming
Liming as a method to neutralize highly acidic drainage waters from sulphate basins in western Finland, 14:37247 (RA;NO)

Ph Value
Loch Fleet Project, 14:37244 (RA;NO)

Rock-Fluid Interactions
Alkalinity production in soil and rock: A useful concept for understanding acidification of soil and freshwater, 14:37259 (RA;NO)

Rocky Mountains
Processes affectin the chemistry of waters passing through a high elevator Sierra Nevada watershed, 14:37240 (RA;NO)

Site Surveys
Radiological survey of San Diego Bay, 14:37279 (R;US)

Snow
Quality of surface water evolution during snowmelt. International symposium on acidification and water pathways, 14:37238 (RA;NO)

Soils
Relation between water flow paths in the soil and runoff chemistry at Risdalsheia, a small headwater catchment in southern Norway, 14:37265 (RA;NO)
Use of representative field plots for the determination of hydrological flow-paths and associated hydrochemistry in studies of surface water acidification, 14:37261 (RA;NO)

Water Chemistry
Precipitaton, surface and subsurface water chemistry in a tolerant hardwood forest basin, 14:37262 (RA;NO)
Processes affectin the chemistry of waters passing through a high elevator Sierra Nevada watershed, 14:37240 (RA;NO)
Water chemistry/water discharge relationships within the Churchill River diversion and Lake Winnipeg regulation region, Manitoba, Canada, 14:35895 (R;CA)

Water Quality
Precipitaton, surface and subsurface water chemistry in a tolerant hardwood forest basin, 14:37262 (RA;NO)
Relation between water flow paths in the soil and runoff chemistry at Risdalsheia, a small headwater catchment in southern Norway, 14:37265 (RA;NO)

SURFACES
Effects of road condition on the operating costs of buses, 14:36406 (R;ZA)
Effects of road-surface properties on the fuel consumption of trucks and buses, 14:36405 (R;ZA)
Resonant charge-exchange studies with hyperthermal-energy ion beams: development of multi-detection capabilities and a data acquisition system. Final report, 15 November 1986-14 May 1988, 14:37460 (R;US)
Theoretical investigations of phonon anomalies in fcc La and W(001), 14:36603 (D;US)
SURRY POWER STATION UNIT-1

Fusion reactor materials semiannual progress report for the period ending September 30, 1988, 14:37759 (R;US)

THERMONUCLEAR REACTORS
See also STELLARATOR TYPE REACTORS
TOKAMAK TYPE REACTORS
Canadian contributions to the safety and environmental aspects of fusion, 14:37757 (R;CA)
Controlled thermonuclear fusion in TOKAMAK type reactors, the European example: Joint European Torus (JET), 14:37763 (R;BR;In Portuguese)
Internal shielding of thermonuclear reactors, 14:37766 (RA;SU;In Russian)
Large coil task instrumentation and diagnostics, 14:36929 (J;US)
Neutronics analysis for aqueous self-cooled fusion reactor blankets, 14:37756 (R;CA)
Structural characteristics of proposed ITER TF coil conductor, 14:36930 (J;US)
Thermonuclear synthesis. Scientific-technical collection, 14:37712 (R;SU;In Russian)

THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS

THERMOSPHERE
Global density specification in the lower thermosphere. Final report, 15 June 1985-17 June 1988, 14:37448 (R;US)

THIN FILMS
Composition and structure of the passive oxide film on iron as observed by second harmonic generation, 14:36650 (BA;US)
Cross-sectioning magnetic thin films for TEM, 14:36685 (BA;US)
Effect of noble gases on the properties of ion-beam-sputtered niobium films, 14:36465 (R;US)
Measurements of the structure and dynamics of thin film growth on electrode surfaces by SHG, 14:36369 (BA;US)

THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS

THIOBACILLUS FERROXIDANS
Electrochemistry of thiobacillus ferrooxidans reactions with pyrite: Technical progress report, January 15–April 15, 1989, 14:35528 (R;US)
Respiratory enzymes of Thiobacillus ferrooxidans: Progress report, March 1988–July 1989, 14:37325 (R;US)

THIOETHERS
See SULFIDES

THIOPHENE
Deactivation of hydrotreatment catalysts used for coal liquids: Semi-annual report, 12 May 1988–11 November 1988, 14:35525 (R;US)

THOMAS-FERMI MODEL
Ionization equilibrium in dense plasmas, 14:37748 (D;US)

THOMAS-FERMI-DIRAC MODEL
See THOMAS-FERMI MODEL

THORIUM 230
$^{230}Th/^{234}U$ dating of the quaternary spring travertines in the Arava Rift Valley of Israel and paleoclimatic implications. Final report for the period 15 December 1986 - 15 December 1987, 14:37405 (R;XA)

THORIUM 232 TARGET
Ionization chamber-detecting setup of Vasilisa installation for the study of characteristics of total fusion reaction product decay, 14:37115 (R;SU;In Russian)
Multiplicity of neutrons from violent heavy-ion collisions: ^{40}Ar + Th and U from 10 to 77 MeV/u, 14:37603 (R;DE)

THORIUM COMPLEXES
Determination of thermodynamic characteristics of extraction equilibria in the systems containing ammonium salts and organic phosphorus compounds (Solvent extraction of nitrates of Ce, Pr, Eu, UO_2^{2+}, Th.), 14:36717 (RA;SU)
Extraction properties of TBP - uranyl nitrate disolvate, 14:36718 (RA;SU)
Hydration and solvation energies and thermodynamic distribution coefficient of some extraction systems (Extraction systems: TBP-UO_2Cl_2($ThCl_4$)-HCL; AA-$InCl_3$-HCl, where AA-acetylacetone.), 14:36825 (RA;SU)
Ir, NMR and conductivity study of extracts and the character of the mutual influence of metals in their extraction with alkylammonium salts, 14:36716 (RA;SU)

THORIUM COMPOUNDS
On thorium and plutonium cocrystallization with calcium oxalate, 14:37356 (RA;SU;In Russian)
THREE MILE ISLAND-1 REACTOR
Team skills training: the critical next step at GPU Nuclear, 14:35985 (RA;US)
THREE MILE ISLAND-2 REACTOR
Fission product behaviour during the TMI-2 accident, 14:36190 (BA;US)
Radionuclide distribution in TMI-2 reactor building basement liquids and solids, 14:36193 (BA;US)
Results of surface activity and radiation field measurements made during surface decontamination experiments conducted at TMI-2, 14:36194 (BA;US)
TMI-2 core debris analytical methods and results, 14:36191 (BA;US)
TMI-2 leadscrew radionuclide deposition and characterization, 14:36192 (BA;US)
THREE-BODY PROBLEM
Adiabatic representation of scattering problem in three-body quantum system, 14:37705 (R;SU;In Russian)
THYROID STIMULATING HORMONE
See TSH
THYROXINE
Israel EQAS for thyroid related hormones. Final report for the period June 1984 - February 1988, 14:37316 (R;XA)
TIDAL POWER PLANTS
Generic steel designs for tidal power barrages. V. 1, pt. 1, 14:35950 (R;GB)
Generic steel designs for tidal power barrages. V. 1, pt. 2, 14:35951 (R;GB)
Prediction of post barrage densities of shorebirds. V. 1. Overview, 14:35947 (R;GB)
Prediction of post barrage densities of shorebirds. V. 3. Invertebrates, 14:35946 (R;GB)
Prediction of post barrage densities of shorebirds. V. 4. Birds, 14:35945 (R;GB)
River Loughor tidal power scheme. A feasibility study report, 14:35949 (R;GB)
Wader migration and distribution in South West estuaries (in relation to the Severn Barrage). V. 1, 14:35948 (R;GB)
Wader migration and distribution in South West estuaries. V. 2. Appendices, 14:35944 (R;GB)
TIGHT SANDS
See PERMEABILITY
SANDSTONES
TIN
A test system for thermomechanical fatigue of solder joints, 14:36585 (R;US)
New ideas on interface structure from significant disagreements between experiments and prediction of interface composition in Ag base alloys, 14:36505 (BA;FR)
Observations on the mechanisms of fatigue in eutectic Pb-Sn solder joints, 14:36574 (R;US)
TIN 124 TARGET
Neutron emission and nuclear spin distribution in 4n and 5n exit channels of the ^{156}Dy compound nucleus, 14:37586 (R;FR)
TIN ALLOYS
See also TIN BASE ALLOYS
Cyclic migration and fracture in solid solution alloys, 14:36988 (BA;FR)
Intermediate scale industrially processed Nb_3Sn(Ti) by powder metallurgy, 14:36941 (J;US)
TIN BASE ALLOYS
Neutron diffraction study of crystal structure of K_2Sn_3, Rb_2Sn_3, and Cs_2Sn_3, 14:36547 (RA;SU;In Russian)
TITANIUM
Dynamic studies of deformation and fracture at grain boundaries, 14:36533 (BA;FR)
Effect of construction of current and gas supply on protective atmosphere composition in welded installation, 14:36565 (RA;SU;In Russian)
Introduction of experience of television information-control systems in welding, 14:36569 (RA;SU;In Russian)
TITANIUM ALLOYS
See also TITANIUM BASE ALLOYS
Current capacity degradation in superconducting cable strands, 14:36940 (J;US)
Flux creep in a Tevatron cable, 14:36932 (J;US)
Noncontacting laser diffraction strain extensometer for material properties characterization at high temperatures, 14:36617 (R;US)
TITANIUM BASE ALLOYS
An Auger sputter profiling study of nitrogen and oxygen ion implantation in two titanium alloys, 14:37688 (R;US)
Diffusion at explosion welding of titanium with steel, 14:36568 (RA;SU;In Russian)
TITANIUM COMPOUNDS
See also TITANIUM OXIDES
TITANIUM SULFIDES
Fundamental magnetic studies of iron-rare-earth-metalloid alloys: Technical performance report, 14:36483 (R;US)
TITANIUM OXIDES
Structure and properties of nanophase TiO_2, 14:36534 (BA;FR)
TITANIUM SULFIDES
Staging in layer intercalates: Progress report, 1 June 1988–31 May 1989, 14:36667 (R;US)
TOA
Thermodynamics of solvent extraction on $(C_8H_{17})_3N$-$C_6H_5CH_3$-UO_2Cl_2-HCl system, 14:36860 (RA;SU)
TOKAMAK DEVICES
See also COMPACT IGNITION TOKAMAK
ITER TOKAMAK
JIPPT-2 DEVICE
TORE SUPRA TOKAMAK
TUMAN DEVICES
Determination of magnetic field direction in tokamaks from laser-induced Lyman-α fluorescence, 14:37717 (R;FR)
Multiple mode model of tokamak transport, 14:37740 (R;US)
Review of effects of NBI [neutral beam injection] and rotation on plasma transport in tokamaks, 14:37720 (R;US)
Tokamak electrical conductivity modified by electrostatic trapping in the applied electric field, 14:37741 (R;US)
Turbulence and abnormal transport in tokamak plasmas, 14:37718 (R;FR;In French)
TOKAMAK TYPE REACTORS
See also COMPACT IGNITION TOKAMAK
JT-60 TOKAMAK
Atomic physics studies of highly charged ions on tokamaks using x-ray spectroscopy, 14:37738 (R;US)
TOLUENE
Containment of organic leachates from leaking underground storage tanks using tailored soils as liners, 14:37216 (R;US)
Macromolecular coal structure as revealed by novel diffusion tests: Quarterly technical report, January 15, 1989–April 15, 1989, 14:35553 (R;US)
TOPO
Mechanism of extraction of uranium (6) by mixtures of phosphororganic extractants, 14:36864 (RA;SU)
TOPPING CYCLES
MHD Integrated Topping Cycle Project: Quarterly progress report, 30 September–31 October 1987, 14:36346 (R;US)
MHD Integrated Topping Cycle Project: Third quarterly progress report, 1 February–30 April 1988, 14:36347 (R;US)
MHD [Magnetohydrodynamics] Integrated Topping Cycle Project: Second quarterly technical progress report, November 1, 1987–January 31, 1988, 14:36348 (R;US)
TORE SUPRA
See TORE SUPRA TOKAMAK
TORE SUPRA TOKAMAK
Plugging regime in the pump limiter throat, 14:37719 (R;FR)
Tore Supra first wall description and behaviour during the initial plasma experiments, 14:37760 (R;FR)
TORSATRON STELLARATOR
See also ATF TORSATRON
Alpha-particle losses in compact torsatron reactors, 14:37715 (R;US)

TOTAL SUSPENDED PARTICULATES
Indoor spatial monitoring of combustion-generated pollutants (TSP, CO, and BAP) by Indian cookstoves, 14:37162 (R;US)
TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS
TOWERS (EXTRACTION)
See EXTRACTION COLUMNS
TOXIC MATERIALS
See also TOXINS
AQUIRE: Aquatic Toxicity Information Retrieval data base. Data file, 14:37275 (R;US)
Health-hazard evaluation determination report No. 75-151-259, Winchester Hospital, Winchester, Massachusetts, 14:37184 (R;US)
Reporting for the domestic substances list, 14:36232 (R;CA;In French)
The preparation of TEM specimens from hazardous or difficult materials, 14:36681 (BA;US)
TOXICITY
1988 DOE model conference proceedings: Volume 5, 14:35775 (R;US)
AQUIRE: Aquatic Toxicity Information Retrieval data base. Data file, 14:37275 (R;US)
TOXINS
Characterization of chemically tritiated microcystin-Lr and its distribution in mouse. Interim report, 14:37328 (R;US)
TRACE ELEMENTS
See ELEMENTS
TRACK DETECTORS (DIELECTRIC)
See DIELECTRIC TRACK DETECTORS
TRADE
Energy analysis of Canadian external trade, 1971 and 1976, 14:36227 (R;CA;In English and French)
TRAINING
Implementing requirements for radiation worker training from DOE Order 5480.11, 14:35754 (R;US)
TRANSDUCERS
Measurement of internal forces in superconducting accelerator magnets with strain gauge transducers, 14:36911 (J;US)
TRANSFER (ELECTRON)
See ELECTRON TRANSFER
TRANSFER (HEAT)
See HEAT TRANSFER
TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
TRANSFORMER OILS
See INSULATING OILS
TRANSFORMERS
Effect of oil viscosity on transformer loading capability at ambient temperatures below 0^0C, 14:35972 (R;CA)
Electromagnetic transients program (EMTP): Volume 3, Workbook III: Final report, 14:35954 (R;US)
High voltage power condition systems powered by flux compression generators, 14:37005 (R;US)
High-voltage pulsed transformer development, 14:37009 (R;US)
TRANSIENTS
Electromagnetic transients program (EMTP): Volume 3, Workbook III: Final report, 14:35954 (R;US)
TRANSISTORS
See also MOS TRANSISTORS
Photocurrent variability of discrete bipolar devices, 14:37017 (R;US)
TRANSITION ELEMENT COMPLEXES
See also CHROMIUM COMPLEXES
COBALT COMPLEXES
HAFNIUM COMPLEXES
MOLYBDENUM COMPLEXES
NIOBIUM COMPLEXES
RHENIUM COMPLEXES
RHODIUM COMPLEXES
RUTHENIUM COMPLEXES
SCANDIUM COMPLEXES
TANTALUM COMPLEXES
TUNGSTEN COMPLEXES
VANADIUM COMPLEXES
YTTRIUM COMPLEXES
ZIRCONIUM COMPLEXES
Petroleum sulfides, sulfoxides, and sulfones used as extragents (Solvent extraction of actinies, rare earths, transition metals.), 14:36839 (RA;SU)
Size-selective extraction of metal salts: the general principles (Metals: alkali, alkaline earth, rare earth, transition elements, actinides.), 14:36831 (RA;SU)
TRANSITIONS (ENERGY LEVEL)
See ENERGY-LEVEL TRANSITIONS
TRANSLATORS
Approaching distributed database applications using a programmable terminal emulator, 14:37819 (R;US)
TRANSMISSION (DATA)
See DATA TRANSMISSION
TRANSMISSION (HEAT)
See HEAT TRANSFER
TRANSMISSION LINES
See POWER TRANSMISSION LINES
TRANSPORT
See also MARITIME TRANSPORT
VAM2D–Variably saturated analysis model in two dimensions: Version 5.0 with hysteresis and chained decay transport: Documentation and user's guide, 14:35793 (R;US)
TRANSPORT (NEUTRON)
See NEUTRON TRANSPORT
TRANSPORT (PROTON)
See PROTON TRANSPORT
TRANSPORT (RADIATION)
See RADIATION TRANSPORT
TRANSPORT INSURANCE
See INSURANCE
TRANSPORTATION SECTOR
Electronic communication and data transfer productivity enhancements, 14:37800 (R;US)
TRANSPORTATION SYSTEMS
See also BUSES
MASS TRANSIT SYSTEMS
RAPID TRANSIT SYSTEMS
General economic stimulation and energy indicators for capital investment initiatives in various transportation modes, 14:36229 (R;CA)
TRANSPOSONS
DNA modification of Mu elements in maize, 14:37313 (RA;US)
Effect of temperature on Ty transposition, 14:37295 (RA;US)
Effects of DNA damage on transcription and transposition of Ty retrotransposons of yeast, 14:37386 (RA;US)
Evidence of host-mediated regulation of retroviral element expression at the posttranscriptional level, 14:37312 (RA;US)
Factors affecting retrotransposition of intracisternal A-particle proviral elements, 14:37289 (RA;US)
Genes that affect Ty-mediated gene expression in yeast, 14:37309 (RA;US)
Induction of VL30 element expression as a response to anoxic stress, 14:37388 (RA;US)
Molecular basis of transposable element-induced mutations in Drosophila melanogaster, 14:37308 (RA;US)
Mutation induction by MR(P) and its modification by various conditions, 14:37341 (RA;US)
Possible role of retrotransposons in carcinogenesis, 14:37389 (RA;US)
Regulation of expression and transposition of murine endogenous retroviral elements, 14:37292 (RA;US)
Regulation of the maize suppressor-mutator element, 14:37287 (RA;US)
Regulation of yeast Ty element transposition, 14:37310 (RA;US)
Regulatory aspects of the expression of P-M hybrid dysgenesis in Drosophila, 14:37294 (RA;US)
Role of the bacterial host in the mechanism and regulation of Tn10 transposition, 14:37304 (RA;US)
SOS mutagenesis and replisome reactivation in bacteria: options acquired by transposition?, 14:37340 (RA;US)

Structure of mutations induced by I-R hybrid dysgenesis in Drosophila melanogaster, 14:37311 (RA;US)
Transposons as probes of regulatory machinery, 14:37291 (RA;US)
What transposable elements do in bacteria, 14:37286 (RA;US)

TRANSURANIUM ELEMENTS
See also NEPTUNIUM
PLUTONIUM
TRIFID [TRansuranic Isotopic Fraction Interrogation Device]: A second generation plutonium isotopic analysis system, 14:35843 (R;US)

TRANSURANIUM WASTES
See ALPHA-BEARING WASTES

TREES
See also CEDARS
PINES
Free life history strategies, 14:35922 (J;US)
Gas exchange characteristics of Pinus edulis and Juniperus monosperma, 14:35917 (J;US)
Net throughfall chemistry and atmospheric deposition at two forests of different elevations, 14:35924 (J;US)
Theory and methodology of single tree volume estimation, 14:35907 (R;CA;In English and French)

TRIBUTYL PHOSPHATE
See TBP

TRICHLOROMETHANE
See CHLOROFORM

TRIGA TYPE REACTORS
See also AFRRI REACTOR
Calculation analysis of TRIGA MARK II reactor core composed of two types of fuel elements. Final report for the period 1 August 1984 - 31 July 1986, 14:36115 (R;XA)

TRIGA-F-DASA REACTOR
See AFRRI REACTOR

TRIGGER CIRCUITS
An Outstanding Junior Investigator Award in experimental high energy physics: Progress report, January 1, 1989 to December 31, 1989, 14:37102 (R;US)

TRIIODOTHYRONINE
Israel EQAS for thyroid related hormones. Final report for the period June 1984 - February 1988, 14:37316 (R;XA)

TRINIDAD AND TOBAGO
The effects of well completion, steam injection and production practices on heavy oil production performance, 14:35613 (RA;CA)

TRIOCTYLAMINE
See TOA

TRIOCTYLPHOSPHINE OXIDE
See TOPO

TRIPLET PARTICLES
See QUARKS

TRITIATED COMPOUNDS
See TRITIUM COMPOUNDS

TRITIUM
An efficient palladium isotope chromatograph (EPIC) for hydrogen, 14:36727 (R;US)
Canadian contributions to the safety and environmental aspects of fusion, 14:37757 (R;CA)
Catalytic properties of hydride-forming intermetallic compounds in reactions with the participation of hydrogen, 14:36814 (RA;SU;In Russian)
Characterization of chemically tritiated microcystin-Lr and its distribution in mouse. Interim report, 14:37328 (R;US)
Kinetics of the gas phase tritium oxidation reaction, 14:36849 (R;US)
Substantiation of rate setting of surface contamination with amino acids, labelled with tritium, 14:37362 (RA;SU;In Russian)
Tritium labeling by thermally generated tritons, 14:36845 (R;US)

TRITIUM COMPOUNDS
Field studies of HT oxidation and dispersion in the environment. I. The 1986 August experiment at Chalk River, 14:37225 (R;CA)
Radiobiological effects of fractionated intake of ^{3}H-nucleosides by mammalian organism, 14:37368 (RA;SU;In Russian)

TRITIUM TARGET
Evaluation of total interaction cross-sections for nuclei with mass number 3, 14:37610 (RA;XA)

TROUT
Assessing the cost-effectiveness of alternative mitigation strategies: the simulation model, 14:35885 (RA;US)
Economic analyses of fish mitigation strategies, 14:35884 (RA;US)
Juvenile production, 14:35878 (RA;US)
Modeling downstream migration, 14:35879 (RA;US)
Modeling the estuary and early ocean life stanza, 14:35880 (RA;US)
Observations of lake trout (Salvelinus namaycush) spawning behaviour in low pH lakes near Sudbury, Ontario, 14:37391 (R;CA)
Reexamination of the use of otolith nuclear dimensions to identify juvenile anadromous and nonanadromous rainbow trout, Salmo Gairdneri, 14:37327 (J;US)
Smolt monitoring in the Columbia River Basin, 14:35883 (RA;US)

TRU WASTES
See ALPHA-BEARING WASTES

TRUCKS
Effects of road-surface properties on the fuel consumption of trucks and buses, 14:36405 (R;ZA)

TSCHEBYSCHEFF APPROXIMATION
See POLYNOMIALS

TSH
Israel EQAS for thyroid related hormones. Final report for the period June 1984 - February 1988, 14:37316 (R;XA)

TSP
See TOTAL SUSPENDED PARTICULATES

TUBES
A finite-element model for eddy-current nondestructive evaluation: Final report, 14:36086 (R;US)
The effect of transverse stress on the critical current of Nb_3Sn cable-in-conduit superconductors, 14:36931 (J;US)

TUBES (CONDUITS)
See PIPES

TUFF
Preliminary analyses in support of in situ thermomechanical investigations, 14:35809 (R;US)
Surface reactions of natural glasses, 14:35821 (BA;US)
Thermal-conductivity data for tuffs from the unsaturated zone at Yucca Mountain, Nevada: Yucca Mountain Project, 14:35807 (R;US)

TUMAN DEVICES
Fast current rise studied in the steady-state discharge of the Tuman-3 device, 14:37723 (RA;SU;In Russian)

TUMOR CELLS
Two families of human endogenous retroviral genomes, 14:37290 (RA;US)

TUMOR VIRUSES
See ONCOGENIC VIRUSES

TUMORS
See NEOPLASMS

TUNGSTATES
See also CESIUM TUNGSTATES
LITHIUM TUNGSTATES
RUBIDIUM TUNGSTATES
Connection between structure of alkali metal molybdates and tungstates and their spectral and energetic characteristics, 14:36763 (RA;SU;In Russian)
Enthalpies of melting and polymorphic transformations of alkali metal molybdates, tungstates, and chromates, 14:36761 (RA;SU;In Russian)
Thermodynamic properties of alkali metal chalcogenates, chromates, molybdates, and tungstates, 14:36764 (RA;SU;In Russian)

TUNGSTEN
Enhanced concentrations of Ni at grain boundary dislocations in Ni-treated W, 14:36511 (BA;FR)
Particle production results from HELIOS, 14:37595 (R;US)
Theoretical investigations of phonon anomalies in fcc La and W(001), 14:36603 (D;US)

TUNGSTEN ALLOYS
See also TUNGSTEN BASE ALLOYS
Corrosion of high-density sintered tungsten alloys. Part 1. Immersion testing, 14:36463 (R;AU)
Corrosion of high-density sintered tungsten alloys. Part 2. Accelerated corrosion testing, 14:36464 (R;AU)
TUNGSTEN BASE ALLOYS
Microstructural refinement of W-Ni-Fe heavy alloys by alloying additions, 14:36462 (R;US)
TUNGSTEN CARBIDES
Structural analysis and properties of grain boundaries in hexagonal carbides, 14:36628 (BA;FR)
TUNGSTEN COMPLEXES
Chemistry of bimetallic linked cyclopentadienyl complexes: Progress report, 1 December 1986–30 November 1989, 14:36738 (R;US)
TUNGSTEN COMPOUNDS
See also TUNGSTEN CARBIDES
TUNGSTEN OXIDES
Study of physicochemical properties of alkali metal salts of 12-tungstogallic acid, 14:36768 (RA;SU;In Russian)
TUNGSTEN OXIDES
Plasma spraying of WO/sub3/. Structure characterization of the coating, 14:36643 (R;CA)
TURBULENCE
Linear theory of uncompensated thermal blooming in turbulence, 14:37486 (R;US)
TURBULENT FLOW
Experimental study of the phenomena of turbulent flow in the narrow gaps between subchannels of rod bundles, 14:36033 (R;DE;In German)
Finite control volume modeling of laminar and turbulent flow of air in an enclosure, 14:37485 (R;US)
TEGENA: Detailed experimental investigations of temperature and velocity distributions in rod bundle geometries with turbulent sodium flow, 14:36032 (R;DE;In German)
TURKEY
Build-operate-transfer concept. A case history from Turkey, 14:35870 (RA;CA)
TVA
See TENNESSEE VALLEY AUTHORITY
TWO-PHASE FLOW
Gas-liquid flow in dividing Tee-junctions with a horizontal inlet and different branch orientations and diameters, 14:36981 (R;DE)
Interfacial area measurement methods, 14:36978 (R;US)
TYPE-II SUPERCONDUCTORS
Localized electrons in tetragonal $YBa_2Cu_{2.93}O_{6.38}$, 14:36644 (R;CA)
Microstructural investigation of $RBa_2Cu_3O_7$-δ (R=Y, Gd, Nd), 14:36645 (R;CA)
Solid-state interaction between nickel and $YBa_2Cu_3O_x$, 14:36646 (R;CA)
TYPE-III SUPERCONDUCTORS
See TYPE-II SUPERCONDUCTORS

U

UCLLL
See LAWRENCE LIVERMORE LABORATORY
ULTRASONIC TESTING
Benefits offered by an advanced US-technique in describing faults (ALOK), 14:36991 (RA;DE;In German)
ULTRAVIOLET RADIATION
See also EXTREME ULTRAVIOLET RADIATION
Resistance of bacterial spores to ultraviolet light, 14:37339 (R;US)
Studies of collisional and nonlinear radiative processes for development of coherent uv and xuv sources. Final report, 30 September 1985-29 September 1988, 14:37463 (R;US)
UNDERGROUND GASIFICATION
See IN-SITU GASIFICATION
UNDERGROUND MINING
See also LONGWALL MINING
ROOM AND PILLAR MINING
Technical note on the construction of stoppings or dams in the Sydney coalfield, 14:35574 (R;CA)
UNDULATORS

UNIVERSAL BLACKBODY RADIATION
See BLACKBODY RADIATION
UNIVERSE
Cosmic relics from the big bang, 14:37440 (R;US)
UNIVERSITIES
See EDUCATIONAL FACILITIES
UNSEALED SOURCES
Theory and practice of sanitary inspection of radiological units, 14:37650 (RA;SU;In Russian)
UPWELLING
Measurement of upwelling flow from Upper Bear Creek reservoir air diffusers, 14:35899 (R;US)
URANIUM
Fast Flux Test Facility metal fuel pin fabrication, 14:35759 (R;US)
Implementation of isotope correlation technique for safeguards, 14:35836 (R;US)
Separation potential of solvent extraction in the recovery of metals, 14:35762 (BA;US)
[Analytical chemistry in nuclear technology, Karlsruhe, Germany and visit to Seibersdorf, Austria, June 3–22, 1989]: Foreign trip report, 14:35766 (R;US)
URANIUM 234
$^{230}Th/^{234}U$ dating of the quaternary spring travertines in the Arava Rift Valley of Israel and paleoclimatic implications. Final report for the period 15 December 1986 - 15 December 1987, 14:37405 (R;XA)
URANIUM 235 TARGET
Analysis of dynamic characteristics of ^{235}U fission with resonance neutrons on the basis of data on fission fragment charge and mass fragmentation, 14:37634 (R;SU;In Russian)
Study on fragment charge and mass fragmentation in ^{235}U fission with resonance neutrons, 14:37604 (R;SU;In Russian)
URANIUM 236 TARGET
Estimations and theoretical forecasting of ^{236}U neutron data in the energy range of neutrons up to 20 MeV, 14:37625 (RA;SU;In Russian)
URANIUM 238 TARGET
Multiplicity of neutrons from violent heavy-ion collisions: ^{40}Ar + Th and U from 10 to 77 MeV/u, 14:37603 (R;DE)
URANIUM COMPLEXES
See also URANYL COMPLEXES

XUV
See EXTREME ULTRAVIOLET RADIATION
XYLENES
Containment of organic leachates from leaking underground storage tanks using tailored soils as liners, 14:37216 (R;US)

Y

Y-12 PLANT
Nonfilm radiography at the Oak Ridge Y-12 Plant, 14:37121 (R;US)
YANG-MILLS THEORY
On the construction of certain instanton bundles over flat tori, 14:37546 (R;DE)
Wormhole instanton solution in the Einstein-Yang-Mills system, 14:37445 (R;JP)
YANKEE VERMONT REACTOR
See VERMONT YANKEE REACTOR
YEASTS
Cellular stress induced by UV-radiation and hyperthermia - a common mechanism, 14:37353 (RA;AU)
Genetic control of recombination between repeated sequences, 14:37293 (RA;US)
Regulation of yeast Ty element transposition, 14:37310 (RA;US)
YIELDS
Refinery yield model spreadsheet system (RYMSS) documentation, 14:35640 (R;US)
YTTERBIUM 152
On the feeding and spectroscopy of superdeformed states, 14:37635 (R;SE)
YTTERBIUM 175
Intensive two-quantum cascades and fragmentation of quasiparticle states in some deformed nuclei, 14:37633 (R;SU;In Russian)
YTTRIUM
Low-temperature isotopic exchange in molecular hydrogen on films of transition and rare earth metals and their alloys with copper, 14:36813 (RA;SU;In Russian)
YTTRIUM ALLOYS
Low-temperature isotopic exchange in molecular hydrogen on films of transition and rare earth metals and their alloys with copper, 14:36813 (RA;SU;In Russian)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM COMPOUNDS
YTTRIUM COMPLEXES
Role of the liquid-liquid partition coefficient of the extractable chelate in the extraction efficiency of metals with β-diketones (Metals: rare earths, scandium, yttrium.), 14:36819 (RA;SU)
Trials on the molecule design of organic extractants, 14:36841 (RA;SU)
YTTRIUM COMPOUNDS
See also YTTRIUM FLUORIDES
YTTRIUM NITRATES
YTTRIUM OXIDES
YTTRIUM PHOSPHATES
^{17}O NMR study of $YBa_2Cu_3O_{7-\delta}$, 14:36641 (R;US)
Anomalous temperature dependence of Cu NMR line width and magnetization in $YBa_2Cu_3O_{7-\delta}$, 14:36642 (R;US)
Consolidation of powders of the oxide superconductor YBa_2Cu_3Ox by high energy-high rate processing, 14:36611 (R;US)
Nuclear relaxation rates at copper and oxygen sites in $YBa_2Cu_3O_7$, 14:36640 (R;US)
Phase equilibria in the systems Li_2MoO_4-$BaMoO_4$-$Ln_2(MoO_4)_3$, Ln=La-Lu, Y. Luminescence of $Li_3Ba_2Ln_3(MoO_4)_8$-Nd^{3+}, 14:36760 (RA;SU;In Russian)
Study of the system LiC_2H_5COO-$Y(C_2H_5COO)_3$-H_2O at 25 deg C, 14:36784 (RA;SU;In Russian)
Thermal conductivity anisotropy in single crystal $YBa_2Cu_3O_{7-x}$, 14:36616 (R;US)
YTTRIUM FLUORIDES
Interaction of ammonium fluoroyttrates with lithium salts, 14:36783 (RA;SU;In Russian)
YTTRIUM NITRATES
Formation conditions and some properties of double nitrates of rare alkali metals and rare earths, 14:36781 (RA;SU;In Russian)
YTTRIUM OXIDES
A film transmission line resonator to measure the microwave surface resistance of $YBa_2Cu_3O_{7-x}$, 14:36901 (J;US)
A simple method for preparing superconducting high Tc thin films, 14:36956 (J;US)
Anisotropies in the magnetic penetration depth and critical current density of $R_1Ba_2Cu_3O_{7-x}$ (R = Y or Ho), measured on magnetically-aligned powder composites, 14:36952 (J;US)
Characterization of YBaCuO and ErBaCuO thin films deposited on silicon and gallium arsenide substrates, 14:36899 (J;US)
Effect of Y_2O_3 additions on the plasticity of sintered Cr_2O_3, 14:36607 (J;US)
Flux noise and flux creep in YBCO thin films, 14:36897 (J;US)
Grain size control in powder processed $Y_1Ba_2Cu_3O_x$, 14:36947 (J;US)
High resolution electron microscopy of interfaces in functional materials, 14:36623 (BA;FR)
In situ growth of superconducting YBaCuO using reactive electron-beam coevaporation, 14:36955 (J;US)

Low contact-resistivity junctions to ceramic superconductors, 14:36945 (J;US)
Low frequency resistance fluctuations in films of high temperature superconductors, 14:36900 (J;US)
Phase relations in quaternary copper oxide electrodes, 14:36652 (BA;US)
RF electromagnetic investigation of an $YBa_2Cu_3O_7$ thin film by proximity coupling, 14:36902 (J;US)
TEM study of ZrO_2/Al interface, 14:36629 (BA;FR)
X-ray absorption spectroscopy investigations of high Tc superconductors, 14:36649 (BA;US)

YTTRIUM PHOSPHATES
Ternary phosphates $Ca_9LiR_23/(PO_4)_7$ (R=rare earths, Y, Bi), 14:36756 (RA;SU;In Russian)

YUCCA MOUNTAIN
Preliminary analyses in support of in situ thermomechanical investigations, 14:35809 (R;US)

YUKON TERRITORY
Proceedings of the technology transfer workshop [for] northern water quality monitoring, 14:37256 (R;CA)
Whitehorse efficient woodheat demonstration, 14:35865 (R;CA)

Z

Z NEUTRAL BOSONS
Z^0 physics at the SLC, 14:37513 (R;US)

Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES

ZEA MAYS
See MAIZE

ZEOLITES
Conversion of methanol over zeolite ZSM-5, 14:35859 (R;ZA)
Energy storage by adsorption of water on zeolite for building heating, 14:36211 (RA;CA;In English and French)
Preparation of zeolites for TEM using microtomy, 14:36688 (BA;US)

ZINC
Dependence of diffusion-induced grain boundary migration on grain boundary structure, 14:36527 (BA;FR)
Diffusion induced grain boundary migration in Ni(Zn) polycrystals, 14:36523 (BA;FR)
Grain boundary structure in HCP metals, 14:36490 (BA;FR)
Trace metal removal by iron coprecipitation: Field evaluation: Final report, 14:35960 (R;US)

ZINC 68 TARGET
Transition between phenomena governed by the mean field and those governed by nucleon-nucleon collisions in the reaction $^{40}Ar + {}^{68}Zn$, 14:37580 (R;FR;In French)

ZINC ALLOYS
See also BRASS
Hydrogen embrittlement in grain boundaries studied by fatigue crack propagation in Al-Zn-Mg bicrystals, 14:36987 (BA;FR)

ZINC COMPOUNDS
See also ZINC SULFIDES
ZINC TELLURIDES
Systems MVO_3-$Zn(VO_3)_2$ and MVO_3-$Mn(VO_3)_2$, where M=Li, Rb, Cs, 14:36770 (RA;SU;In Russian)

ZINC SULFIDES
Clasterization of isoelectronic tellurium addition in $ZnS_{1-x}Te_x$ solid solution, 14:37681 (RA;SU;In Russian)

ZINC TELLURIDES
Clasterization of isoelectronic tellurium addition in $ZnS_{1-x}Te_x$ solid solution, 14:37681 (RA;SU;In Russian)
Polycrystalline cadmium telluride n-i-p solar cell: Annual subcontract report, 1 June 1987–31 August 1988, 14:35912 (R;US)

ZIRCONIUM
Effect of construction of current and gas supply on protective atmosphere composition in welded installation, 14:36565 (RA;SU;In Russian)
Fast Flux Test Facility metal fuel pin fabrication, 14:35759 (R;US)
Health-hazard evaluation determination report No. 74-78-297, Amax Speciality Metals, Parkersburg, West Virginia, 14:37185 (R;US)

ZIRCONIUM 90
On the two gas approach for exciton model master equation, 14:37611 (RA;XA)

ZIRCONIUM 90 TARGET
Effects of realistic partial state densities on preequilibrium decay, 14:37616 (RA;XA)

ZIRCONIUM 91 TARGET
Effects of realistic partial state densities on preequilibrium decay, 14:37616 (RA;XA)

ZIRCONIUM 92 TARGET
Effects of realistic partial state densities on preequilibrium decay, 14:37616 (RA;XA)

ZIRCONIUM 94 TARGET
Effects of realistic partial state densities on preequilibrium decay, 14:37616 (RA;XA)

ZIRCONIUM ALLOYS
See also ZIRCONIUM BASE ALLOYS
Evolution of the chemistry of passive films of sputter-deposited, supersaturated Al alloys. Annual report, 1 July 1987-30 November 1988, 14:36461 (R;US)
Interfaces in composites reinforced with rapidly solidified metallic ribbons, 14:36495 (BA;FR)

ZIRCONIUM BASE ALLOYS
Increasing of effeciency and quality of electron beam welding of zirconium alloys by using and additional vacuum chamber, 14:36561 (RA;SU;In Russian)

ZIRCONIUM COMPLEXES
Application of eda interactions for explaining and forecasting the extractive ability of elementoorganic reagents, 14:36858 (RA;SU)
Electron structure and electrostatic potential of some neutral organophosphorus extractants and their complexes, 14:36818 (RA;SU)
Mechanism of nitric acid and strontium extraction with zirconium di-2-ethylhexyl phosphate complexes-studying by the ^{14}N and ^{31}P NMR methods, 14:36837 (RA;SU)
State of water in extracts and its interaction with microwave field, 14:36824 (RA;SU)

ZIRCONIUM OXIDES
Effect of thermal aging on mechanical and electrical properties of the MgO-partially stabilized zirconia bodies, 14:36526 (BA;FR)
TEM study of ZrO_2/Al interface, 14:36629 (BA;FR)
Transformation toughening of ceramics. Final report, 1 September 1985-31 August 1988, 14:36612 (R;US)

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Contract No.	Abstract No.	Report No.
AA03-76SF00034	**Stanford Linear Accelerator Center, Menlo Park, CA (USA)**

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

ORDER FORM

DOE and DOE contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name _____ Telephone _____

Address _____

City _____ State _____ ZIP _____

Shipping Address (if different from above)

Name _____

Address _____

City _____ State _____ ZIP _____

_____

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no. _____

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no. _____

☐ Check/Money Order enclosed for $ _____

☐ Charge to my ☐ American Express ☐ VISA ☐ MasterCard

_____ _____
Account Number Card expiration date

☐ Ship & Bill (see below for restrictions)
Employer identification number (9 digits) __ __ - __ __ __ __ __ __ __

Purchase Order number _____

Phone number of billing office _____
(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

IV. SELECTIONS

Order number _____ Report number _____

Energy Abstracts for Policy Analysis (EAPA), a monthly abstract journal, provides its readers an authority from which they can obtain energy-related nontechnological or quasitechnological articles or reports having significant reference value. Citations included in *EAPA* are selected based strictly on content, with only substantive articles included. This selectivity in scope and coverage is effected to emphasize references dealing with policy; legislative and regulatory factors; social, economic, and environmental impacts; and with programmatic efforts.

Subscriptions to *EAPA* are available from the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402. The subscription rate for 12 monthly issues plus the annual index is $70.00 (domestic) and $89.50 (outside the North American continent). The annual index is available separately to subscribers for $22.00 (domestic) or $27.50 (outside the North American continent). A single issue costs $6.00 (domestic) or $7.50 (outside the North American continent).

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
